CONTENTS

LETTERS TO THE EDITOR.....6 <i>Readers comment on such diverse subjects as the power of collective meditation, Climategate, homoeopathy vs cancer, secret plans to cope with a biblical-scale flood in Australia, and systemic problems in the health system.</i>	SCIENCE NEWS.....49 <i>This edition, we feature Bruce Cathie and Rod Maupin's exploration of the updated Gridpoint Atlas® software which can be used to calculate World Grid harmonics and plot grid maps on Google Earth screenshots.</i>
GLOBAL NEWS.....8 <i>We report on ULF waves recorded over Haiti before the 2010 quake, Wi-Fi's deadly effects on trees, safety issues with flu vaccines, the strongest La Niña event on record, WikiLeaks revelations and revolutions, and more.</i>	THE 21st-CENTURY RENAISSANCE OF SCIENCE.....55 <i>By Professor Robert Pope. To ensure our survival into the future, the 20th-century scientific world-view, blinded by the flawed second law of thermodynamics, must be replaced by an ethical holographic life-science.</i>
WIKILEAKS: WORLDWIDE INFORMATION WAR.....13 <i>By Andrew Gavin Marshall. WikiLeaks' recent release of the first batch of 250,000 US diplomatic cables gives insights into government and media propaganda, the machinations of diplomats, and opportunities for positive social transformation amidst the new global awakening.</i>	THE TWILIGHT ZONE.....63 <i>We feature an extract from Karl Brugger's rare book "The Chronicle of Akakor", which recounts an Amazonian Indian's story of his tribe's relationship with an alien master race over thousands of years and of great catastrophes that have befallen planet Earth.</i>
THE KNIGHTS OF THE EXTREME RIGHT.....23 <i>By Philip Coppens. Many secret societies, including those promising spiritual enlightenment, have been infiltrated by intelligence operatives for the purposes of grooming terrorists and fulfilling nefarious political agendas.</i>	REVIEWS—Books.....69 <i>"Porphyria" by Steven Rochlitz, PhD "Energizing Water" by J. Schwuchow, J. Wilkes and I. Trousdell "Beyond Belief" by James F. Coyle "Earthing" by C. Ober, S. T. Sinatra, MD, and M. Zucker "Homo Serpiens" by Aeolus Kephas "What Lurks Beyond" by Jason Offutt "The Art of Close Encounters" by Kim Carlsberg "George Adamski: A Herald..." by Gerard Aartsen "The Cosmic Conspiracy" by Stan Deyo "The NASA Conspiracies" by Nick Redfern "The Mystery of U-33" by Nigel Graddon "The Forbidden Archeologist" by Michael A. Cremo "The Origin of God" by Laurence Gardner "Challenges of Change" by Stanley A. Fulham</i>
LAETRILE vs CANCER: AN AUSTRALIAN STORY.....29 <i>By Rev. Dr Shé D'Montford. The medical/pharmaceutical establishment has a vested interest in ensuring that successful alternative cancer treatments are withheld from the public. Laetrile or vitamin B17 is one substance that threatens the stranglehold of "the cancer industry".</i>	REVIEWS—DVDs.....76 <i>"NEXUS Conference 2010" produced by E&E Productions</i>
THE FUTURE OF THOUGHT COMMUNICATION.....35 <i>By Belinda Doyle. Brain-to-computer interface technology is increasingly helping people with profound disabilities but is also paving the way for new forms of communication with network-enabled telepathy.</i>	REVIEWS—Music.....77 <i>"Akave" by George Telek "Tibet: Awakened Heart" by Tenzin Choegyal and Taro Terahara "Shakuhachi Water Meditations" by Riley Lee "This is the Story" by Miriam Lieberman</i>
IS ALZHEIMER'S CAUSED BY PARACETAMOL?.....41 <i>By Walter Last. Within two decades of the introduction of phenacetin and paracetamol analgesics in the 1880s, the first Alzheimer's cases were described, and thereafter the disease rate rose sharply. Natural medicine offers a solution to this increasingly prevalent illness.</i>	NEXUS BOOKS, DVDs, ADS, SUBSCRIPTIONS.....87-96

STATEMENT OF PURPOSE

NEXUS recognises that humanity is undergoing a massive transformation. With this in mind, NEXUS seeks to provide 'hard-to-get' information so as to assist people through these changes. NEXUS is not linked to any religious, philosophical or political ideology or organisation.

PERMISSION-TO-REPRODUCE POLICY

While reproduction and dissemination of the information in NEXUS is actively encouraged, anyone caught making a buck out of it, without our express permission, will be in trouble when we catch them!

Editorial

Well, 2011 has arrived with a bang, or, in the case of many countries including Australia, South Africa, Sri Lanka and Brazil, with unprecedented flooding. The culprit, we are told, is the strongest La Niña pattern ever recorded, as you'll read in the Global News section in this edition.

Also in the news are numerous reports from all over the planet of thousands of dead birds, fish and now mammals being found. Occasional reports of mass fish deaths and even mass bird deaths are not new, but the sheer scale of these recent events (most of which are confined to local area news reports) is quite alarming. It is unclear whether there is any common cause for these deaths. I hope to have more information on this disturbing topic in our next issue.

And if record-breaking floods and strange mass animal deaths are not enough to keep you wondering, then what about the Sun? A few months ago it produced the largest solar filament, or solar prominence, on record. Fortunately, so far, all the recent coronal mass ejections have shot out into space, away from the Earth.

Back down here on Earth, the WikiLeaks Cablegate phenomenon is still capturing attention worldwide. The leaking of the first batch of 250,000 US diplomatic cables has already changed the world forever, and only 1% of the cables has been released to date! For people in power, there are no surprises with the contents of the cables; but for the average person in the street, especially in Muslim countries, they reveal shocking evidence of government hypocrisy and worse, with many governments secretly supporting the USA and Israel while uttering meaningless platitudes at the masses. The mid-January ousting of the Tunisian president is considered to be a result of WikiLeaks revelations, which gave new impetus to existing tensions. The people decided that enough was enough. See our feature article plus Global News in this edition for more on the WikiLeaks releases.

I want to make particular mention of two articles in this issue. The first is in the Science News section, and it's all about the new Gridpoint Atlas software—the latest update of the original Gridworks program based on Bruce Cathie's World Grid harmonics system. This is an incredible piece of software which also utilises Google Earth to plot the location of any part of the World Grid that you specify. As word of this gets out, I expect to hear from researchers who have discovered new locations of interest and connections with key grid intersection points. Truly, this software puts powerful information into the hands of the public. Get it while you can!

The other article is in Twilight Zone, and it's an edited extract from a rare book called *The Chronicle of Akakor*. In the book (but not included in our extract), author Karl Brugger mentions that 24 December 2011—not 2012—is the end of the Mayan long-count calendar. Note the context of this event in relation to the recorded history of the Chosen Tribes: for these people, it is not the end of the world *per se*; it marks the end of an era and, importantly, the return of the gods, who they say come back to Earth every 6,000 years.

Meanwhile, rumours are on the rise that the Chinese have entered into a relationship with an alien race and that this involves game-changing technology. One thing that's not clear is whether this means conquest or cooperation by and with China. I also hope to have more information about this next time. The signs are there for all to see that the geopolitical landscape has changed dramatically, with China emerging on top. Many insiders say that war with China is coming soon, but is likely to be piggybacked on a major Earth-changing event.

Remember the article last edition about the power of collective prayer and meditation to help change people and thus the world? I'll say it again: the world needs as much love, light and prayer as you can give. If you want to change the planet to a higher vibration, then start visualising and broadcasting that vibration *now*. Already, millions of people send out love and prayers to the world every full moon and new moon. Seriously, what have you got to lose? Love to all...

Duncan

Letters to the Editor ...

Collective Consciousness

Dear Duncan: I have just read my first edition of NEXUS (vol. 18, no. 1), after spotting the cover headline for Dr Roger Taylor's article "The Power of Collective Meditation". Thank you for printing this article, which is one of the most informative and stimulating texts I have read recently.

It is clear that the discoveries of "real" scientists, i.e., the non-blinkered, self-interest-free minority such as those responsible for the advances made in the field of quantum physics, validate the activities of groups who have experimented with the power of consciousness to effect healing and positive change on a global scale.

However, as Dr Taylor pointed out in his article, there are millions of altruistic individuals who do regularly pray and meditate. For many of us, though, our practice is not as powerful as it could potentially be. I think there are two reasons for this: first, many people are unaware that their activities have been scientifically proven to be effective; and second, their method lacks structure and coherence.

I would like to bring to your attention the "laser" meditation technique explained by a Bulgarian mystic, O. M. Aivanhov, who encouraged interested participants to meet communally on a regular basis. He suggested utilising the vibrations of sound by listening to short passages of highly charged

music (such as by Beethoven or Mozart) as an aid to the visualisation process.

This method involves unifying the faculties of mind with the heart and will, in order to broadcast positive light energy into the wider community. In special circumstances, projecting thoughts of peace and light specifically towards the powers-that-be is recommended!

Encouragingly, there are now groups who regularly practice this method of collective meditation on every continent.

As quantum physics is now proving, it is consciousness that creates our world. Thank you again for printing Dr Taylor's empowering article. I hope that an increasing number of peaceful people of goodwill will unite their minds to utilise this knowledge. We will create a force that is ultimately capable of defeating the bastions of egoism and vested interest. Then we can begin to create a much better world for all.

Regards,
Susan J., Brighton, UK

Climategate Censored

Hi Duncan: I have been reading NEXUS for 20 years.

Last year I read the Project Censored compilation and there was no mention of the Climategate scandal. I suspected this may have been due to the timing.

I waited for this year's summary, and again no mention. In fact, they [the Project Censored team] have gone one step worse:

they quote the IPCC as if it had something valuable to say. Perhaps you should edit the list of top 25 stories to a top 10. Trivial stories about segregation in US schools can be the first to go. The rest can be located on the Project Censored website.

Keep up the good work.
Zyconoclast, Griffith,
NSW, Australia

Electric Circuits and QED

Dear Duncan: In 2009 I made a film which explains how an electric circuit works from the view of quantum electrodynamics (QED). Tom Bearden wrote a short comment about the film which I have published on my website at www.electra-energy-ag.com/en/animation/.

Since it has become very difficult nowadays to receive recognition for a scientific work, I was thinking if I may ask you also to write a short comment about the film.

Warm regards,
Marcus Reid, Germany

Time Flies with NEXUS!

Hello Duncan and staff: Loved your editorial in the 18/01 edition of the magazine, which is excellent again.

You mentioned "how time has flown" in your editorial. I find your magazine so informative and easy to read that when I have to wait for another six or seven weeks for the next edition to arrive, time drags.

An old-timer told me that he did not know how he ever had time to go to work, as he has been so busy

since retiring. Thinking I do not wish to be that busy, I now enjoy six Saturdays and a Sunday each week.

Keep up your good work.
Regards,
John L., South Australia

Against Atheism & Zionism

Dear Duncan: Thanks again for a thought-provoking and informative issue (18/01). Two matters in particular are of interest to me: your editorial, and Palestine [Project Censored article, item 9].

With reference to your editorial on whether we are meaningless, I became a lapsed atheist when I faced up to the "obvious" contradiction of the popular materialist view of everything being without purpose—as you rightly imply. Simply, if there is only material (and its complement, energy), then life has evolved from this. Non-life material is subject to increasing disorder; life to increasing order, which must derive this force from within its material self.

We individually have purposefulness, if only to continue living (as all life has). So as life has this purpose and life is inherent in the material of the Universe, then the Universe has purpose—albeit that we may not be conscious of what that is.

With regards to Palestine, the Zionist Jews (there are many Jews who are not Zionists, and many Jews who oppose what the Zionist state does in their name) trade on a perversion of their religion and history to perpetuate

... more Letters to the Editor

the apartheid mentioned in the article, along with the ethnic cleansing that they and their forebears initiated and continue: crimes against humanity.

What is becoming more known is the crime against humanity that Zionists have perpetrated, and continue to perpetrate, by ethnically cleansing Palestine to achieve their mythical racial purity (akin to the Nazis).

I can only assume that the western powers support the Israeli state because of misguided ideas that this is in their countries' interests (such as keeping the surrounding Arab countries in a permanent state of war with each other and Israel—divide and rule) and the pressure from the equally misguided Jews in their countries who believe the Zionist myths.

Best wishes,
Ian C., UK

Homoeopathy vs Cancer

Dear Editor: Fourteen years ago I had brain cancer and was given months to live. I had all the conventional treatment, including radiology and chemotherapy. All my hair fell out in one weekend after radiology, and I put on four stone in four weeks after the steroids. My medical notes say that chemotherapy was not helping, and that my disease had progressed during my treatment.

I was mostly bed-bound, and to get anywhere I had to use a wheelchair. I had agonising pains in my legs, was unable to open my eyelids voluntarily, and my

vision was so poor that I could only see an arm's length away—and that was fuzzy with double vision.

I was told that the treatment was not working for me, and was asked if I wanted to stay in the hospital, go to a hospice or go home. I decided to go home, and as a last resort I consulted a homoeopath. Since then, I have never needed to consult a doctor again.

I trained as a homoeopath, have been registered for the last 10 years, and now work in the West Midlands in England.

Gemma, UK

More Floods for Australia?

Dear Duncan: I spotted this at George Ure's website (www.urbansurvival.com) on 12 January 2011 [first published on 6 March 2010 at www.peoplenomics.com]: "Every once in a while, a reader email or a news tip comes along which just screams for more follow-up because it fits with a lot of 'rumbles' being heard lately. That was the case this week when the following email arrived from Australia:

'Hi George. [I'll] keep it short; know you have tons to look at every day.

'I just don't get it. My husband is working on this huge project. In the first meeting, the top management levels are informed the government is building it for the 10,000-year flood and it's not public knowledge. He looks around and hardly anyone bats an eyelid. The speaker looks my husband in the

eye and says, "Yes, the last time Noah was involved. Yes, *that* flood!"

'Forty-five billion being spent on this one. His part is in Brisbane, Queensland, yet many roads are being rebuilt higher all over the state and many new motorway tunnels. The tunnels in Brisbane are what we believe will be the way to relay the big floods out to sea (too bad if you're in one at the time is my guess). Examining the way they have built the new hospital, it appears that ships could dock there: no reason to be built that high.

'No photography is allowed, and this is regulated strictly. Must be finished before 2012, but last few days they have suggested to speed up works and intend to work under floodlight around the clock. Now, that's just making me a bit more nervous. Maybe you're right: 2012 has been moved forward?

'Feel free to ask for more info; he will send it over the weekend if so. I probably would have dismissed it as myth myself, but when you're on the payroll for the big event, well, it doesn't get more real than that. Are there any projects over there reporting the same reason for big projects? Maybe they weren't meant to slip the truth into this meeting.

'Just reply simply "more info", and I will forward facts if you're interested. The company is sworn to secrecy but he hasn't signed anything and says he is willing to speak. Why

should we be in the dark while they spend so much to safeguard the corporate structures? I really don't think we will get warnings on what they must already know is coming.

'Yours..."

Exposing Medical Errors

Dear Duncan: As requested, I write to advise you of my web page about my husband Don's dreadful suffering and consequent death in May 2007 at the hands of a major hospital in Australia.

As my testament is self-published, I am relying on the goodwill of those I have contact with to ensure that as many people as possible are able to have access to information about systemic problems with the Australian (western) health care system.

I thank you for your help and appreciate any help you can give me in (a) ensuring that those who caused my husband's suffering and death be held accountable, (b) hopefully changing the public health care system in Australia so that injury and death caused by medical error will be investigated as with any other wrongful injury and death, and (c) ensuring that those accountable will be made to answer for their actions.

The website is www.withoutduecare.com.au.

Thank you,

Therese Mackay, Australia

FEDERAL RESERVE THE MOST PROFITABLE BANK IN HISTORY

The financial crisis has helped the Federal Reserve in the US become the most profitable bank in history. "The Fed" turned a US\$80.9 billion profit in 2010, \$76.2 billion of which came from securities that it bought during the crisis.

The Fed's interest costs are minimal because almost all of its liabilities, such as bank reserves, are paid at the overnight rate of 0.0% to 0.25%, but many of the longer-term assets it has bought yield 4.0% or 5.0%.

Most of the Fed's income (\$76.2 billion) came from interest on the approximately \$2,000 billion of securities it has acquired as part of its efforts to stimulate the US economy. It earned \$7.1 billion in net income from special-purpose vehicles, such as that set up to buy assets from the failed investment bank Bear Stearns, and \$3.4 billion from its loans to the bailed-out insurer AIG.

ULF RADIO EMISSIONS RECORDED OVER HAITI BEFORE QUAKE

The French satellite DEMETER observed a dramatic increase in ultra-low-frequency (ULF) radio waves over Haiti in the month before the M7.0 earthquake in January 2010.

DEMETER (Detection of Electro-Magnetic Emissions Transmitted from Earthquake Regions) was launched in 2004 by the French space agency CNES into a polar orbit approximately 700 kilometres

above the Earth's surface.

In early December, a group of researchers from the Technical University of Serres in Greece released research data showing that DEMETER detected a significant change in ultra-low-frequency radio waves in the ionosphere above Haiti in the month before the quake.

"The results reveal a significant increase of the energy of ULF waves, up to 360%, for a period of one month before the main earthquake compared with the energy of the background," they said.

In a carefully worded statement, Michael Athanasiou, one of the scientists involved, said: "The results of this paper clearly indicate that ULF electromagnetic waves can be very useful in revealing possible precursor seismic phenomena."

IS WI-FI KILLING TREES?

Research in the Netherlands has shown that trees that were planted in close proximity to a wireless router suffered from damaged bark and dying leaves.

The city of Alphen aan den Rijn, in the west of the country, ordered the study five years ago after officials found unexplained abnormalities on trees which they did not believe had been caused by any known viral infection.

The researchers took 20 ash trees and exposed them to various kinds of radiation for three months. The trees were exposed to six sources of radiation with frequencies ranging from 2412 to 2472 MHz and a power of 100 mW at a distance of just 20 inches [50.8 centimetres].

Trees placed closest to the Wi-Fi radio developed a "lead-like shine" on their leaves that was caused by

... GLOBAL NEWS ...

the dying of the upper and lower epidermis. This would eventually result in the death of parts of the leaves, the study found.

The researchers also discovered that Wi-Fi radiation could slow the growth of corn cobs.

In the Netherlands, about 70 per cent of all trees in urban areas show the same symptoms, compared with only 10 per cent five years ago, the study found. Trees in densely forested areas are not affected.

BACTERIA USED TO TURN CELLS INTO COMPUTERS

Researchers at the University of California, San Francisco (UCSF), have engineered *E. coli* bacteria with the key molecular circuitry that will enable genetic engineers to program cells to communicate and perform computations.

The work builds into cells the same logic gates found in electronic computers and creates a method to make circuits by "rewiring" communications between cells. This system can be harnessed to turn cells into miniature computers, according to findings reported in the journal *Nature*.

That, in turn, will enable cells to be programmed with more intricate functions for a variety of purposes, including in agriculture and in the production of pharmaceuticals, materials and industrial chemicals, according to Christopher A. Voigt, PhD, a synthetic biologist and an associate professor in the UCSF School of Pharmacy's Department of Pharmaceutical Chemistry and the senior author of the paper.

"The purpose of programming cells is not to have them overtake electronic computers," said Voigt. "Rather, it is to be able to access all of the things that biology can do in a reliable, programmable way."

(Source: ScienceDaily.com, 8 December 2010, <http://tinyurl.com/3a7lybm>)

WIKILEAKS: US THREATENED "RETALIATION" TO BULLY EU INTO ACCEPTING GM CROPS

Reacting to a French pledge to represent the "common interest" in considering biotech foods, a former US ambassador recommended publishing a "retaliation list" of European locations where genetically modified organisms (GMOs) were being grown, in the hope that activists would destroy them and "cause some pain" for officials, a leaked US diplomatic cable shows.

In the confidential communication dated 14 December 2007, the then US Ambassador to France, Craig Roberts Stapleton, recommended creating the list if France and the European Union continued to ban biotech seeds.

"Mission Paris recommends that [the US government] reinforce our negotiating position with the EU on agricultural biotechnology by publishing a retaliation list when the extended 'Reasonable Time Period' expires," Stapleton wrote.

In December 2010, more than one million Europeans signed a petition demanding that the EU halt the approval of new genetically modified crops. The petition was later dismissed by the EU Commission

on procedural grounds.

In the last 12 years, only two organisms have been licensed for seeding across Europe, and one of them was a potato that triggered the recent mass petition against the crops. The world's number-one multinational biotechnology firm, Monsanto, isn't happy about that.

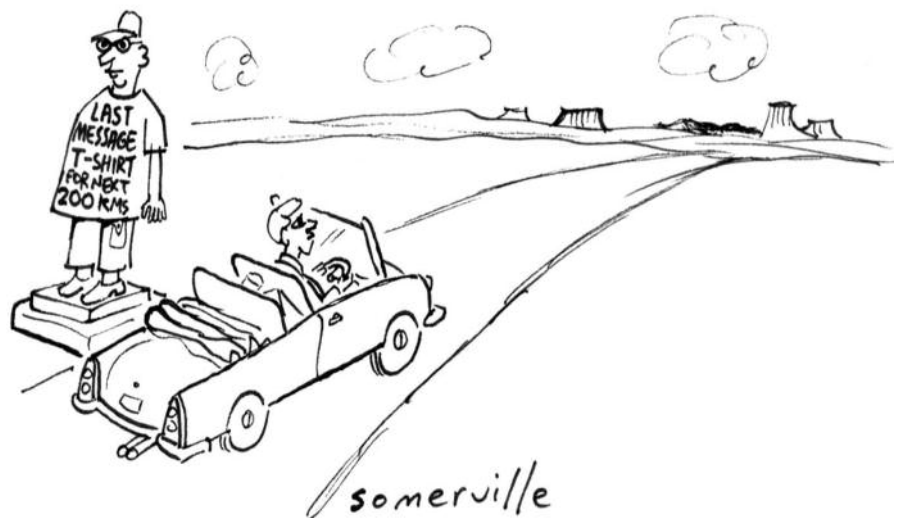

The Nation's Jeremy Scahill revealed in September that the world's top producer of genetically modified seeds hired US security contractor Blackwater to "infiltrate activist groups organizing against the multinational biotech firm".

Meanwhile, other cables released by WikiLeaks show that, behind the scenes, Spain has been a key ally of the US in defending genetically modified crops.

Another cable sent to the Vatican on 19 November 2009 indicated that Pope Benedict XVI also supports genetically modified crops, but will not admit it in public.

"Vatican officials remain largely supportive of genetically modified crops as a vehicle for protecting the environment while feeding the hungry, but—at least for now—are unwilling to challenge bishops who disagree," the cable explained.

... GLOBAL NEWS ...

SHOCK STUDY SHOWS NO VALUE IN FLU VACCINATIONS

A remarkable study published in the Cochrane Library found no evidence of benefit for influenza vaccinations and also noted that the vast majority of trials were inadequate.

The authors stated that the only trials showing benefit were industry funded. They also pointed out that the industry-funded studies were more likely to be published in the most prestigious journals. In addition, they found cases of severe harm caused by the vaccines, in spite of inadequate reporting of adverse effects.

The study, "Vaccines for preventing influenza in healthy adults", is damning of the entire pharmaceutical industry and its minions, the drug-testing industry and the medical system that relies on them.

The authors attempted to find and investigate every study that has evaluated the effects of flu vaccines in healthy adults aged 18–65. To this end, they searched the "Cochrane Central Register of Controlled Trials (CENTRAL) (The Cochrane Library, 2010, issue 2), MEDLINE (January 1966 to June

2010) and EMBASE (1990 to June 2010)". They included 50 reports; 40 of them were clinical trials, adding up to over 70,000 people. Two reported only on harmful effects and were not included in this study.

Studies of all types of influenza vaccines were included: live, attenuated and killed—or fractions of killed—vaccines.

The authors concluded in a somewhat understated manner: "The results of this review seem to discourage the utilisation of vaccination against influenza in healthy adults as a routine public health measure. As healthy adults have a low risk of complications due to respiratory disease, the use of the vaccine may be only advised as an individual protection measure against symptoms in specific cases."

The authors also found that "industry-funded studies were...cited more than other studies", that "reliable evidence on influenza vaccines is thin", and that "there is evidence of widespread manipulation of conclusions".

To view the study, go to the web page <http://www.ncbi.nlm.nih.gov/pubmed/20614424>.

STRONG LA NINA AFFECTING GLOBAL WEATHER AND CLIMATE

New NASA satellite data indicates that the current La Niña event in the eastern Pacific remained strong during November and December 2010.

"The solid record of La Niña strength only goes back about 50 years and this latest event appears to be one of the strongest ones over this time period," said climatologist Bill Patzert of the Jet Propulsion Laboratory. "It is already impacting weather and climate all around the planet. This La Niña has strengthened for the past seven months and is one of the most intense events of the past half-century."

"Although exacerbated by precipitation from a tropical cyclone, rainfalls of historic proportion in eastern Queensland, Australia, have led to levels of flooding usually only seen once in a century," said David Adamec, oceanographer at NASA's Goddard Space Flight Center. "The copious rainfall is a direct result of La Niña's effect on the Pacific trade winds and has made tropical Australia particularly rainy this year."

(Source: *NASA press release*, 13 January 2011, <http://tinyurl.com/4j8eads>)

FARM ANIMALS CONSUME 80% OF ALL ANTIBIOTICS IN USA

For years, scientists concerned about the threat of antibiotic-resistant bacteria in food-animal production have been trying to figure out just how much antibiotics producers are using each year.

Now, long-awaited data has been released by the US Food and Drug Administration. Of the antibiotics sold in 2009 for both people and food animals, almost 80 per cent were reserved for livestock and poultry. The grand total for 2009: 13.1 million kilograms.

A huge portion of those antibiotics was never intended to

fight bacterial infections; rather, producers most likely administered them in continuous low dosages through feed or water to increase the speed at which their animals grew. And that has many public health experts and scientists troubled.

The growing threat of antibiotic resistance is largely due to the misuse and overuse of antibiotics in people and animals, which leads to an increase in "super-bacteria".

LIVING EARTH SIMULATOR WILL ANALYSE ENTIRE PLANET

An international group of scientists is working on a simulator with the goal of replicating everything that happens on Earth. It will track everything from weather patterns to disease spread to traffic congestion to financial transactions all over the globe.

The Living Earth Simulator, LES, as it is nicknamed, is being created to advance scientific understanding about everything that is happening on the planet and to attempt to figure out what "human actions shape society" and how everything changes the world.

The scientists plan to build a number of supercomputers to crunch the numbers. They will likely also use processing power from all across the Internet, asking mobile phone and computer users to donate a small portion of their processing to the project.

The data will be easier to come by. Websites and services like Wikipedia, Google Maps and government databanks make up a few of more than 70 already existing sources of moving data. NASA's Planetary Skin project will also feed data into LES.

The scientists hope to integrate real-time feeds from social networks like Facebook, stockmarkets, medical records, mobile devices and more.

WIKILEAKS CABLES EXPOSE MUSLIM NATIONS' HYPOCRISY

A preliminary review of the US diplomatic cables released so far by WikiLeaks reveals the duplicity of many Arab nations in foreign policy, especially in the case of Iran. For example, in the past few years, Arab nations have publicly countered Israeli propaganda that Iran is a bigger threat to the world than the resolution of the Palestinian issue, with claims that the failure to bring a just solution to the Palestinians is the number-one issue for Arabs and Muslims. But privately, these same nations have been repeatedly asking the US to bomb Iran and even invade it with ground troops.

The same cables also reveal that, even now, the main financiers of Al-Qaeda are Saudi donors. American Presidents George W. Bush and Barack H. Obama have identified Al-Qaeda as the biggest threat to the US, and yet they've colluded with the nation whose citizens are its biggest financiers.

While the US is worried that the latest revelations from WikiLeaks will undermine its relations with its allies, Muslim governments are worried that these same leaks will expose the extent to which they routinely lie to their own people. Nation after Muslim nation has been exposed as supporting and collaborating with the United States and lying to its public about the extent of its support for US foreign policy. For example, the President of Yemen acknowledged that he would continue to lie to his people and claim that American military operations in Yemen are Yemeni operations; and the Pakistani government does not want its people to know the extent to which it cooperates with the US on nuclear issues.

TUNISIA'S REFORMATION: THE "FIRST WIKILEAKS REVOLUTION"

The drastic changes brought about in Tunisia, which ultimately forced President Zine El-Abidine Ben Ali to flee the country, have been described as the "first WikiLeaks revolution" because the whistleblower website played a major role in stirring up public anger against the corruption of their leader.

According to *The Scotsman*, the revolution is virtually unprecedented in modern Arab history and has already led to experts predicting that other countries in the region could follow suit.

After Ben Ali fled to Saudi Arabia on Friday [14 January], protesters in Cairo chanted: "Ben Ali, tell Mubarak a plane is waiting for him, too!"

US diplomatic cables released by the whistleblower website WikiLeaks called the President and his siblings "The Family", comparing them to a Mafia crime organisation. The cables also revealed that Ben Ali's wife, Leïla, had made huge profits out of building an exclusive school.

One cable was banned in Tunisia, but its contents became widely known. "Corruption in the inner circle is growing. Even average Tunisians are keenly aware of it, and the chorus of complaints is rising.

Tunisians intensely dislike, even hate, first lady Leïla Trabelsi and her family. In private, regime opponents mock her," US Ambassador Robert Godec wrote.

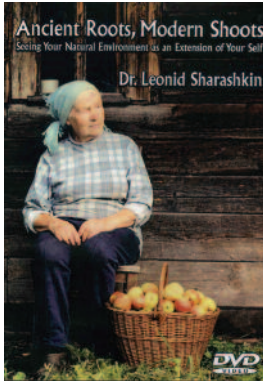

The cables further claimed that, in 2006, two nephews of Ben Ali had seized the yacht of a French businessman.

"Although the petty corruption rankles, it is the excesses of President Ben Ali's family that inspire outrage among Tunisians. With Tunisians facing rising inflation and high unemployment, the conspicuous displays of wealth and persistent rumours of corruption have added fuel to the fire," the cable added.

RINGING CEDARS DVDs (great gift idea)

Ancient Roots, Modern Shoots

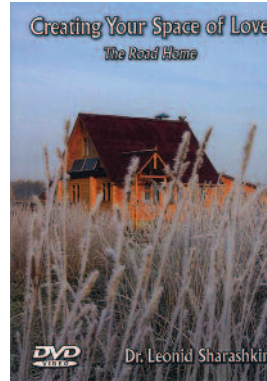

“Seeing Your Natural Environment as an Extension of Your Self”. Presentation by Leonid Sharashkin, editor of The Ringing Cedars Series of books.

Reconnecting to Nature Through Spiritual Permaculture

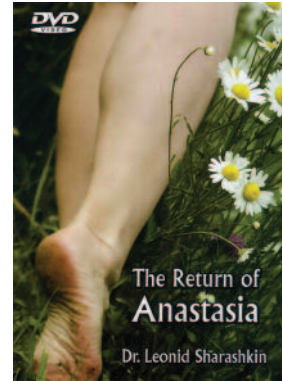

This presentation by Leonid Sharashkin reveals the potential of Russia’s permaculture gardening movement to change our world.

Creating Your Space of Love: The Road Home

Family domain and eco-village planning, presented by Leonid Sharashkin as part of a two-day intensive workshop in Byron Bay.

The Return of Anastasia

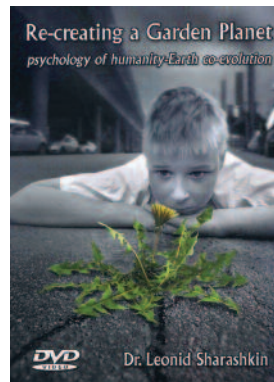

Leonid Sharashkin explains the spiritual, cultural and economic significance of the Russian *dacha* gardening movement.

The School: Humanity's New Future

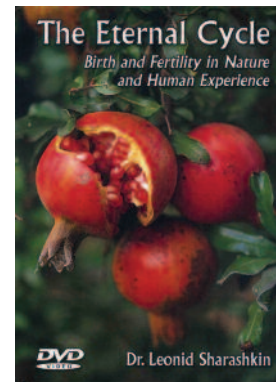

At this school, the children have designed, built and decorated their own campus.

Recreating A Garden Planet

Psychology of Humanity-Earth Co-evolution. Presented by Leonid Sharashkin.

The Eternal Cycle

Fertility and Birth in Nature and Human Experience. Presented by Leonid Sharashkin.

WIKILEAKS AND THE WORLDWIDE INFORMATION WAR

The recent release of the first batch of 250,000 US diplomatic cables leaked to WikiLeaks has provoked unparalleled global interest, both positive and negative and everywhere in between.

One thing is certain: WikiLeaks is changing the status quo.

by Andrew Gavin Marshall

© Global Research, Montreal, Canada, 6 December 2010

Web page:
<http://tinyurl.com/67hmpqq>

There are those who accept what the WikiLeaks releases say at face value, largely due to the misrepresentation of the documents by the corporate-controlled news media. There are those who see the documents as authentic and simply in need of proper interpretation and analysis. Then there are those, many of whom are in the alternative media, who approach the leaks with caution and suspicion. There are those who simply cast the leaks aside as a "psy-op" designed to target specific nations that fit into US foreign policy objectives. Finally, then, there are those who deplore the leaks as "treason" or threatening "security". Of all the claims and notions, the last is, without a doubt, the most ridiculous.

This essay aims to examine the nature of the WikiLeaks releases and how they should be approached and understood. If WikiLeaks is changing things, let's hope people will make sure that it changes things in the right direction.

Media Propaganda against Iran: Taking the Cables at Face Value

This perspective—taking the cables regarding Iran at face value—is perhaps the most propagated one, as it is largely influenced and undertaken by the mainstream corporate media which present the leaked diplomatic cables as "proof" of the media's take on major world issues—most notable among them, Iran's nuclear program. As per usual, the *New York Times* steps centre stage in its unbridled contempt for truth and relentless use of propaganda to serve US imperial interests, headlining articles with titles like "Around the World, Distress over Iran", which explained how Israel and the Arab leaders agree on Iran as a nuclear threat to the world, with the commentary in the article stating that "running beneath the cables is a belief among many leaders that unless the current government in Tehran falls, Iran will have a bomb sooner or later".¹ Fox News ran an article proclaiming that "Leaked Documents Show Middle East Consensus on Threat Posed by Iran", and commented that "the seismic document spill by WikiLeaks showed one area of profound agreement—that Iran is viewed in the Middle East as the region's No. 1 troublemaker".² This, it should be understood, is propaganda.

Yet, we need to refine properly our understanding of propaganda in order to assess what is specifically propagandistic about these stories. While one should remain sceptical of sources and disinformation campaigns (as those who critically analyse the media have known take place time and time again), one must also consider the personal perspective of the source and decipher between authenticity and analysis. These documents, I truly believe, are authentic. In this sense, I do not adhere to the notion that these are a part of a psychological operation (psy-op) or propaganda effort in terms of the actual release of the documents. We must keep in mind that the sources for these cables are US diplomatic channels, and thus the statements within them reflect the perspectives and beliefs of US diplomatic personnel. The documents are an authentic representation of their

statements and beliefs, but that does not imply that they are an accurate representation of reality.

This is where the media come in to propagandise the information within the leaks. The above two examples claim that the leaks show there is a "consensus" on Iran, and thus the American and indeed Israeli positions on Iran for the past several years have been "vindicated" in that they fear Iran is making nuclear weapons. This is nonsense. The media have essentially read and propagated the documents at face value—meaning that because US diplomats and Middle Eastern and Arab leaders all agree that Iran is a "threat" and is trying to make a "nuclear weapon", it therefore must be true. This is a *non sequitur*. Just because Middle Eastern and Arab leaders see Iran as a threat does not make it so.

Again, consider the sources. What makes the Arab leaders trustworthy sources for "unbiased" information? For example, one "revelation" that made its way around the world was the insistence of Saudi Arabia's King Abdullah that America "cut off the head of the snake" of Iran and launch military strikes.³ This has largely been interpreted in the media as "proof" that there is a "consensus" on the "threat" posed by Iran to the Middle East and the world. This has been the propaganda line toed by the *New York Times*, Fox News and the Israeli government, among many others. Yet, we need to contextualise this information properly—something which the *New York Times* has a long record of failing to do (intentionally, I might add). I do not doubt the authenticity of these statements or the belief of the Arab leaders that Iran is a "threat". Iran, on the other hand, has claimed that the leaks are "mischievous", that they serve US interests, and that Iran is "friends" with its neighbours.⁴ This, too, is propaganda. Again, we need to contextualise.

Iran is a Shi'a nation, while the Arab nations, particularly Saudi Arabia, are predominantly Sunni. This presents a means of division among these nations in the region, at least on a superficial basis. The reality, however, is that Saudi Arabia and Iran are far from "friendly" and have not been on good terms since 1979 when the Shah was deposed. Iran is Saudi Arabia's primary contender and competitor for power and influence in the region, and thus Iran is inherently a threat to Saudi Arabia politically.

Further, the Arab states, such as Saudi Arabia, Bahrain, Oman, the United Arab Emirates and Egypt, whose claims against Iran have been widely publicised, must be understood in terms of their relationship to the United States. The Arab states are American proxies in the region. Their armies are subsidised by the American

military-industrial complex; their political regimes (all of which are dictatorships and dynasties) are propped up and supported by America.

The same goes for Israel, although at least it has the outward appearance of a democracy, much like the United States. Further, Israel itself is left subdued to American interests as an American proxy. If Israel's military financing and hardware come from America (which they do), then Israel is dependent upon America for its own military power and is in no position to tell the US not to arm its other regional proxies. If indeed a regional war against Iran is in the making, and it has appeared for some time that there is, it is certainly in Israel's interest to have allies against Iran in the region.

Is WikiLeaks a Propaganda Effort?

The leaders of Israel have been very adamant that the WikiLeaks documents do not embarrass Israel to any extent. Prior to the release, the US government briefed

This has largely been interpreted in the media as "proof" that there is a "consensus" on the "threat" posed by Iran to the Middle East and the world.

Israeli officials on the type of documents that would be released by WikiLeaks regarding Israel.⁵ Israeli Prime Minister Benjamin Netanyahu stated: "There is no disparity between the public discourse between us and Washington, and the mutual understanding of each other's positions."⁶ The Israeli Defence Minister, Ehud Barak, claimed that the documents "show a more accurate view of reality".⁷ One top Turkish

politician stated that looking at which countries are pleased with the releases says a lot, and speculated that Israel "engineered the release" of documents in an attempt to advance its interests and to "pressure Turkey".⁸

Further, the Internet and various alternative news organisations are abuzz with speculation that WikiLeaks itself may be a propaganda front, perhaps even a CIA front organisation, a method of "controlling the opposition" (which we know that, historically, the CIA is not unfamiliar with). Yet, this speculation is based upon the use of the information that is released in the cables, and it strikes me as showing a lack of contextualising the documents.

So, how should one contextualise this? Let's begin with Israel. When the Israeli Prime Minister states that the WikiLeaks releases are not embarrassing to Israel, he is mostly correct. This is not because Israel has nothing to hide (remember, the WikiLeaks documents are not "top secret" documents but merely *diplomatic* cables), but because the diplomatic exchanges that Israel makes largely reflect the reality of the public statements that Israel makes. Israel and its political elite are no strangers to making absurd public

statements, to constantly threatening war with Iran and other neighbours, or to propagandising their belief that Iran is making nuclear weapons (something which has never been proven). Thus, the leaks do not "hurt" Israel's image, because Israel's image internationally is already so abysmal and despicable and because Israeli diplomats and politicians are generally as brazen in what they say publicly as in what they say to each other, so Israel's image has largely remained the same. Of course, Israeli leaders—political and military—are using the leaks to suggest that they "vindicate" their perspective on Iran as a threat, which of course is an absurd propaganda ploy, the exact same technique taken on by the corporate media in taking the cables at face value.

While Iran has slammed these WikiLeaks releases as western propaganda aimed at Iran, this statement itself should be taken as a form of propaganda. After all, Iran claimed that it is "friends" with all its neighbours—a claim which is an historical and present falsity. Iran, like all states, uses propaganda to advance its own interests. Those who attempt to battle the spread of misinformation and propaganda, myself included, must remain highly critical of media representations and campaigns against Iran, of which there are many. Iran is firmly in the targets of America's imperial ambitions; this is no secret. Yet, there is nothing in the current batch of WikiLeaks releases that strikes me as inauthentic in relation to Iran, especially those documents pertaining to the perspectives of western diplomats and Arab leaders. No doubt they have these perspectives simply because they reflect the policy priorities of America and the West itself, not because they are factual in their substance. In this, we must decipher between authenticity and accuracy.

Analysts must not only critically assess the authenticity of documents (and the sources from which they come), but also, and perhaps even more importantly, they must critically analyse the interpretation of those documents. So while I do not doubt the authenticity of documents pertaining to western and Middle Eastern perceptions of Iran (as they fit in with the wider geopolitical realities of the region), it is the interpretations of the documents that I view as active propaganda efforts on the part of western governments and media. The method of this

propaganda effort, however, is in depicting the documents as "factual assessments" of the on-the-ground reality, which they are not. The documents are factual in how they represent the views of those who wrote them, which does not mean that they are factual in their substance. There is a difference, and acknowledging this difference is incredibly important in both the exposure of propaganda and the assessment of truth.

The Truth about Diplomacy

Craig Murray is one voice that should be heard on this issue. Murray is a former British Ambassador to Uzbekistan, who made a name for himself in exposing intelligence from Uzbekistan related to Al-Qaeda as entirely unreliable, due to the methods of torture (such as boiling people alive) which were used to get the information. This intelligence was passed to the CIA and MI6—intelligence which Murray said was "factually incorrect". When Murray expressed his concerns with the higher-ups in the British Diplomatic Service, he was reprimanded for talking about "human rights".⁹ Murray was told by the British Foreign & Commonwealth Office that he had one week in which to resign, and he was threatened with possible prosecution or prison time for revealing "state secrets".¹⁰ He was subsequently removed from his ambassadorial position, and has since become something of a political activist. In short, Murray is exactly the type of diplomat a person should want: honest. But he was also exactly the type of diplomat that western imperial powers don't want: honest.

In the midst of the latest WikiLeaks releases of diplomatic documents, Craig Murray was asked to write an article for the *Guardian* regarding his interpretation of the issue. As Murray later noted, the paper placed his article, largely reduced, hidden in the middle of a long compendium of various commentaries on WikiLeaks. Murray, however, posted the full version on his website. In the article, he begins by assessing the claims of government officials around the world, particularly in the United States, that WikiLeaks exposes the US to "harm", that it puts lives at risk, and that the leaks will "encourage Islamic extremism". Most especially, he assesses the notion that "government secrecy is essential to keep us all safe". Murray explains that, having been a diplomat for over 20 years, he is very

The documents are factual in how they represent the views of those who wrote them, which does not mean that they are factual in their substance. There is a difference, and acknowledging this difference is incredibly important...

familiar with these arguments, particularly the argument that, as a result of the WikiLeaks releases, diplomats will no longer be candid in giving advice "if that advice might become public". Murray elaborates:

Put it another way. The best advice is advice you would not be prepared to defend in public. Really? Why? In today's globalised world, the Embassy is not a unique source of expertise. Often expatriate, academic and commercial organisations are a lot better informed. The best policy advice is not advice which is shielded from peer review.

What of course the establishment mean[s] is that Ambassadors should be free to recommend things which the general public would view with deep opprobrium, without any danger of being found out. But should they really be allowed to do that, in a democracy?"¹¹

Murray pointedly asks why a type of behaviour, such as lying, that is considered reprehensible for most people, "should be considered acceptable, or even praiseworthy, in diplomacy". He explains that for British diplomats "this belief that their profession exempts them from the normal constraints of decent behaviour amounts to a cult of Machiavellianism, a pride in their own amorality". He explains that diplomats come from a very narrow upper social stratum and "view themselves as ultra-intelligent Nietzschean supermen, above normal morality", who are socially connected to the political elite.

In criticising the claims made by many commentators that the release of the leaks endangers lives, Murray writes that this perspective needs to "set against any such risk the hundreds of thousands of actual dead from the foreign policies of the US and its co-conspirators in the past decade". Further, for those who posit that WikiLeaks is a psy-op or propaganda operation or a "CIA front", Murray has this to say:

Of course the documents reflect the US view—they are official US government communications. What they show is something I witnessed personally, that diplomats as a class very seldom tell unpalatable truths to politicians, but rather report and reinforce what their masters want to hear, in the hope of receiving preferment.

There is therefore a huge amount about Iran's putative nuclear arsenal and an exaggeration of Iran's warhead delivery capability. But there is nothing about Israel's massive nuclear arsenal. That is not because wikileaks have censored criticism of Israel.

It is because any US diplomat who made an honest and open assessment of Israeli crimes would very quickly be an unemployed ex-diplomat.¹²

Murray concludes his article with the statement that all would do well to keep in mind: "Truth helps the people against rapacious elites—everywhere."¹³

World Order and Global Awakening

In attempting to understand WikiLeaks and its potential effects (that is, if the alternative media and citizen activists use this opportunity), we must place WikiLeaks within a wider geopolitical context.

Our human world exists as a complex system of social interactions. As powerful and dominating as elites are and have always been, we must understand that they are not omnipotent: they are human and flawed, as are their methods and ideas. But there are other forces at work in the human social world. There is a new and unique development in human history that is taking place around the world. It is unprecedented in reach and volume, and it is also the greatest threat to all global power structures: the "global political awakening". The term was coined by Zbigniew Brzezinski, who wrote in the *New York Times* (16 December 2008):

For the first time in history almost all of humanity is politically activated, politically conscious and politically interactive. Global activism is generating a surge in the quest for cultural respect and economic opportunity in a world scarred by memories of colonial or imperial domination.

In attempting to understand WikiLeaks and its potential effects (that is, if the alternative media and citizen activists use this opportunity), we must place WikiLeaks within a wider geopolitical context.

It is, in essence, this massive "global political awakening" which presents the gravest and greatest challenge to the organised powers of globalisation and the global political economy: nation-states, multinational corporations and banks, central banks, international organisations, and military, intelligence, media and academic institutions. Members of the transnational capitalist class, or "Superclass" as David Rothkopf refers to them, are globalised like never before. For the first time in history, we have a truly global and heavily integrated elite. As elites have globalised their power, seeking to construct a "new world order" of global governance and ultimately global government (decades down the line), they have simultaneously globalised populations.

The "Technological Revolution" involves two major geopolitical developments. The first is that as technology advances, systems of mass communication rapidly accelerate and the world's people are able to engage in instant communication with one another and gain access to information from around the world. In it lies the potential—and ultimately a central source—of a massive global political awakening. Simultaneously, the Technological Revolution has allowed elites to redirect and control society in ways never before imagined, potentially culminating in a global scientific dictatorship, as many have warned of since the early decades of the 20th century. The potential for controlling the masses has never been so great, as science unleashes the power of genetics, biometrics, surveillance and new forms of modern eugenics, implemented by a scientific elite equipped with systems of psycho-social control.

Brzezinski's analysis of the "global political awakening" is useful because of his representation of it as the primary global threat to elite interests everywhere. Thus, people should view the concept of the global political awakening as the greatest potential *hope* for humanity and that it should be advanced and aided—as opposed to Brzezinski's perspective that it should be controlled and suppressed.

Brzezinski posits that to address this new global "challenge" to entrenched powers, particularly nation-states that cannot sufficiently address the increasingly non-pliant populations and populist demands, what is required is "increasingly supranational cooperation, actively promoted by the United States". In other words, Brzezinski favours an increased and expanded "internationalisation", not surprising considering that he laid the intellectual foundations of the Trilateral Commission.

Conceptualising WikiLeaks

I feel that WikiLeaks must be conceptualised within our understanding of this geopolitical reality which we find ourselves in today. There is, of course, logic behind the automatic scepticism and suspicion about WikiLeaks from the alternative media; however, they also risk losing an incredible opportunity presented by WikiLeaks, not only to reach more people with important information but to better inform that information itself.

For those who view WikiLeaks as a conspiracy or plot, as a psy-op of some kind, while indeed these things have taken place in the past, there is simply no evidence for it thus far. Every examination of this concept is

based upon speculation. Many nations around the world, particularly in the Middle East and South Asia, are pointing to the western nations as engaging in a covert propaganda campaign aimed at creating disunity between states and allies. Iran, Turkey, Pakistan and Afghanistan have made such claims. It is no surprise that most of these nations, particularly Iran, are targets of US imperial policy. However, since the WikiLeaks releases speak heavily and negatively about Iran, Pakistan, Afghanistan, Russia, China, Venezuela, etc., one must remember that these are diplomatic cables and represent the opinions and beliefs of the diplomatic establishment, a social group which is historically and presently deeply enmeshed in and submissive to elite ideology and methodology. If all the information they come up with are rumours, conjectures and repeated talking points, that is what will be seen in the diplomatic cables. Indeed, that is exactly the case.

For those who view WikiLeaks as a conspiracy or plot, as a psy-op of some kind...there is simply no evidence for it thus far.

The cables are full of rumours and unsupported allegations. So naturally, they would target these specific nations—deemed geopolitically significant by American imperial interests—and this would explain why there would be far less information on Israel and other allied nations. This is why it seems to me that these cables are authentic. They seem to represent the reality of the "diplomatic social

group", and thus they are a vivid exploration in the study of imperialism. We have been given the opportunity to see the "communications" of imperial diplomacy. It is in this that we are presented with an incredible opportunity.

Further, in regards to many Middle Eastern and Asian nations framing WikiLeaks as a "western plot", as critical thinkers we must take note of the geopolitical reality of the global political awakening. All states are self-interested: that is the nature of a state. Elites all over the world are aware of the reality and potential political power of the global political awakening and thus seek to suppress it or co-opt its potential. States (such as Iran) which are often viewed by the critical press as "targets" of western imperial powers may seek to use this power to their own advantage. They may attempt to steer the global awakening and the alternative media to their favour, which gives them political power. But the alternative media must not pick sides in terms of global elites and power structures: we must remain critical of all sides and all actors.

WikiLeaks is receiving an incredible readership and is reaching out to new audiences, globally and in the American homeland itself, and to the youth of the world. People's perceptions are beginning to change on

a variety of issues. The question is: will the alternative media ignore WikiLeaks and isolate themselves, or will they engage with WikiLeaks and prevent the mainstream corporate media from having a "monopoly of interpretation", which becomes inherently propagandistic. If we do not reach out to this new and growing audience, we are left talking to each other, further isolating ourselves and ultimately becoming subverted and ineffective for change. We need to reach out to new audiences, and this is an incredible opportunity to do so. People are interested, people are curious, people are hungry for more.

WikiLeaks and the Media

Instead of deriding WikiLeaks as "not telling us anything we didn't know before", perhaps the alternative media should use the popularity and momentum of WikiLeaks to take from it the documentation and analysis that further strengthen our arguments and beliefs. This will allow for others, especially new audiences of interested people worldwide, to place the WikiLeaks releases within a wider context and understanding.

The reports from WikiLeaks are "revelations" only to those who largely adhere to the "illusions" of the world: that we live in "democracies" promoting "freedom" around the world and at home, etc. The "revelations", however, are not simply challenging American perceptions of America but the perceptions of all nations and their populations. The fact that these people are reading and discovering new things for which they are developing an interest is an incredible change.

This is likely why the corporate media are so heavily involved in the dissemination of this information (which itself is a major source of suspicion for the alternative media): to control the interpretation of the message. It is the job of the alternative media, intellectuals and other thinking individuals to challenge that interpretation with factual analysis. The WikiLeaks releases actually give us more facts to place within and support our interpretations than they do for the corporate media.

We must ask why the WikiLeaks releases are "revelations" for most people. Well, they are surprising simply for the fact that the media themselves have such a strong hold on the access to, dissemination and interpretation of information. They are revelations because people are indoctrinated with myths. They are not revelations to the alternative media because we have been talking about these things for years.

However, while they may not necessarily be revelations, they are in fact confirmations and vindications and they bring more information to the analysis. It is in this that a great opportunity lies. For since the leaks support and better inform our perspectives, we can build on this concept and examine how WikiLeaks adds to and supports critical analysis.

For those who are newly interested and looking for information, or for those who are having their previous perceptions challenged, it is the alternative media and critical voices alone that can place that information in a wider context for everyone else. In this, more people will see how it is the alternative media with their critical perspectives which are more reflective of reality than, say, the mainstream media (for which WikiLeaks is a "revelation"). Thus, more people may soon start turning to alternative media and ideas; after all, *our* perspectives have been vindicated, not those of the mainstream media (though they attempt to spin it as such).

However, no other organised apparatus is as capable of disseminating as much material as quickly and with such global reach as the mainstream media. If the leaks initially only made it into alternative media, then the information would only have reached those who are already reading the alternative press.

In that, they would not have been such grand "revelations" and would have had a muted effect. In their global exposure of WikiLeaks material (never mind their slanted and propagandistic interpretations), the mainstream media have changed the dynamic and significance of the information. By reaching wider and new audiences, the alternative and critical voices can co-opt these new audiences and lead them away from the realm of information "control" into the realm of information "access". This is potentially one of the greatest opportunities presented for the alternative and critical voices of the world.

The WikiLeaks releases are a globally transformative event, not simply in terms of awakening new people to "new" information but also in terms of the effect it is having upon global power structures themselves. With ambassadors resigning, diplomats being exposed as liars and tools, political rifts developing between western imperial allies, and many careers and reputations of elites around the world at great risk, WikiLeaks is creating the potential for an enormous deterioration in the effectiveness of imperialism and domination. This, in itself, is an admirable and worthy goal. That this is already a reality is representative of how truly transformative WikiLeaks is and could be.

The fact that these people are reading and discovering new things for which they are developing an interest is an incredible change.

People, globally, are starting to see their leaders through a lens not filtered by "public relations". Through mainstream media, information gets filtered through propaganda, which is why it is an essential duty of the alternative media and critical thinkers to place this information in a wider, comprehensive context. This would further erode the effectiveness of empire.

With the reaction of several states and policing organisations in issuing arrest warrants for WikiLeaks editor-in-chief Julian Assange or in calling for his assassination (as one Canadian adviser to the Prime Minister suggested on television), these organisations and individuals are exposing their own hatred of democracy, transparency and freedom of information. Their reactions can be used to discredit their legitimacy to "rule". If policing agencies are supposed to "protect and serve", why are they seeking instead to punish and subvert those who expose the truth? Again, this comes as no surprise to those who closely study the nature of the state and especially the modern phenomenon of the militarisation of domestic society and the dismantling of rights and freedoms. However, it is happening before the eyes of the whole world, and people are paying attention. This is new.

This is an incredible opportunity to criticise foreign policy (read "imperial strategy") and to disembowel many global power structures. More people now, than ever before, will be willing to listen, learn and investigate for themselves. WikiLeaks should be regarded as a gift, not a distraction. Instead of focusing on the parts of the WikiLeaks cables (such as on Iran) which do not reflect the perspectives of the alternative media, we must use WikiLeaks to better inform our own understanding not simply of the "policy" itself but of the complex social interactions and ideas that create the basis for the policy to be carried out.

In regards to the diplomatic cables themselves, WikiLeaks helps to unsheathe and strip away the rhetoric behind imperial policy and expose diplomats not as "informed observers" but as "agents of power". The reaction by nations, organisations and institutions around the world adds further fuel to this approach, as we are seeing the utter distaste that political leaders have for "democracy" and "freedom of information", despite their rhetoric. Several institutions of power can be more widely exposed in this manner.

WikiLeaks as an Opportunity

If WikiLeaks is a psy-op, it is either the stupidest or the most intelligent psychological operation ever undertaken. But one thing is for sure: systems and structures of power are in the process of being exposed to a much wider audience than ever before. The question for the alternative media and critical researchers alike is what will they do with this information and this opportunity.

Julian Assange was recently interviewed by *Time* magazine about WikiLeaks, and explained to its inadequately informed editor that organisations which are secretive need to be exposed:

If their behavior is revealed to the public, they have one of two choices: one is to reform in such a way that they can be proud of their endeavors, and proud to display them to the public. Or the other is to lock down internally and to balkanize, and as a result, of course, cease to be as efficient as they were. To me, that is a very good outcome, because organizations can either be efficient, open and honest, or they can be closed, conspiratorial and inefficient.¹⁵

Assange further explained some of his perspectives regarding the influence of and reactions to WikiLeaks, stating:

Aspects of the Chinese government, Chinese Public Security Service, appear to be terrified of free speech, and while one might say that means something awful is happening in the country, I actually think that is a very optimistic sign, because it means that speech can still cause reform and that the power structure is still inherently political, as opposed to fiscal. So journalism and writing are capable of achieving change, and that is why Chinese authorities are so scared of it. Whereas in the United States to a large degree, and in other Western countries, the basic elements of society have been so heavily fiscalized through contractual obligations that political change doesn't seem to result in economic change, which in other words means that political change doesn't result in change.¹⁶

In the interview, Assange turned to the issue of the Internet and community media:

For the rise of social media, it's quite interesting. When we first started [in 2006], we thought we would have the analytical work done by bloggers and people who wrote Wikipedia articles and so on. And we thought that was a natural, given that we had lots of quality, important content...

...this comes as no surprise to those who closely study the nature of the state and especially the modern phenomenon of the militarisation of domestic society and the dismantling of rights and freedoms.

*The bulk of the heavy lifting – heavy analytical lifting – that is done with our materials is done by us, and is done by professional journalists we work with and by professional human-rights activists. It is not done by the broader community. However, once the initial lifting is done, once a story becomes a story, becomes a news article, then we start to see community involvement, which digs deeper and provides more perspective. So the social networks tend to be, for us, an amplifier of what we are doing. And also a supply of sources for us.*¹⁷

As researchers, media and critics, we must realise that our perspectives and beliefs must be open to change and evolution. Simply because something like this has never happened before does not mean that it isn't happening now. We live in the era of the Technological Revolution, and the Internet has changed economics, politics and society itself on a global scale. This is where the true hope in furthering and better informing the "global political awakening" will need to take speed and establish itself. True change in our world is not going to come from already established or newly created institutions of power, which is where all issues are currently being addressed, especially those of global significance. True change, instead, can only come not from global power structures but from the global "community" of people, interacting with one another via the power unleashed by the Technological Revolution. Change must be globally understood and community organised.

We are on the verge of a period of global social transformation. The question is: will we do anything about it? Will we seek to inform and partake in this transition, or will we sit and watch it be misled, criticising it as it falters and falls?

As "globalisation" has facilitated the emergence of a global elite and several global institutions and ideologies of global power, so too has this process facilitated the "globalisation of opposition". So while elites, globally, actively work to integrate and expand global power structures, they are inadvertently integrating and expanding global opposition to those very same power structures. This is the great paradox of our time, and one which we must recognise, for it is not simply a factual observation but a hopeful situation.

Hope should not be underestimated, and it is something that I have personally struggled with in my views of the world. It is hard to see hope when you

study so much horror in the world and see how little is being done about it. But activism and change need hope. This is very evident from the Obama campaign, which was splashed with rhetoric of "hope" and "change", something that all people rightfully want and need. However, Obama's "hope" and "change" were Wall Street brands and patents; it was a glorious practice in the art of propaganda and an horrific blow to true notions of hope and change. There is a reason why the Obama campaign took the top prizes in public relations industry awards.¹⁸

While indeed, on most fronts in the world, things are getting progressively worse, the alternative media have focused almost exclusively on these issues such that they have blinded themselves to the positive geopolitical developments in the world—namely, the global political awakening and the role of the Internet in reshaping global society. While these issues are acknowledged, they are not fully understood or explained within the wider context: that these are, in fact, hopeful developments; that there is hope. WikiLeaks strengthens this notion, if it is to be taken as an opportunity.

The list of examples surfacing from the WikiLeaks cables is endless in the amount of additional information that can be added to the alternative media's dissemination of information and analysis. Make no mistake: this is an opportunity for the spread of truth, not a distraction from it. Treat it accordingly. ∞

The Ringing Cedars - a stunning series of books from Russia

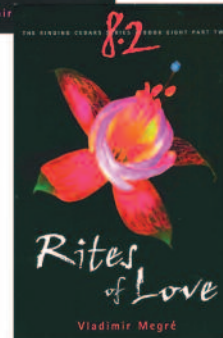

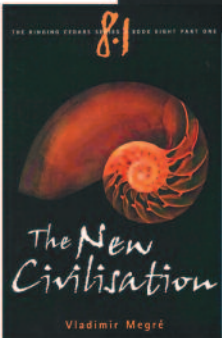

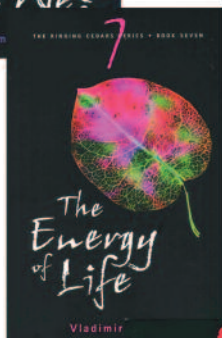

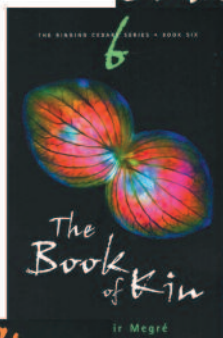

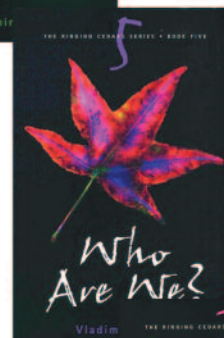

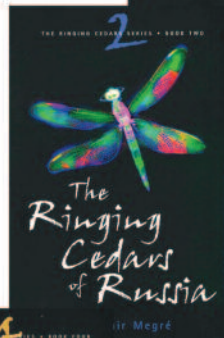

In 1994 a Siberian elder told the entrepreneur Vladimir Megré a fascinating story about the “ringing cedars” - trees respected from Biblical times for their curative powers and the capacity to reconnect human beings with the Divine. The elder told him where such a ringing cedar was growing in the Siberian backwoods.

Vladimir Megré set out on an expedition to find the tree. But his encounter with the elder’s granddaughter, Anastasia transformed him so deeply that he abandoned his commercial plans and, penniless went to Moscow to write a book about what she shared with him.

What happened next thrilled and inspired millions with the series selling over 10 million copies in

Russian alone. Translated into 20 languages, these highly unusual books provide extraordinary insights into dozens of subjects, from natural child rearing to the production of high-energy, healing foods, from natural child rearing to the amazing potential that awaits every one of us, extraterrestrial civilisations, from ancient megalithic science to the vital importance of breast feeding, and from sacred

sexuality to the hidden history of world religions.

- Volume 1: Anastasia
- Volume 2: The Ringing Cedars of Russia
- Volume 3: The Space of Love
- Volume 4: Co-creation
- Volume 5: Who Are We?
- Volume 6: The Book of Kin
- Volume 7: The Energy of Life
- Volume 8.1: The New Civilisation
- Volume 8.2: Rites of Love

THE KNIGHTS OF THE EXTREME RIGHT

Many secret societies, including those aimed at nurturing the spiritual enlightenment of their members, have been infiltrated by intelligence agencies for the purposes of grooming terrorists and fulfilling nefarious political agendas.

Are secret societies just another front for shady intelligence operations? Are members of knightly orders groomed to become terrorists? Many initiatory cults, from the Solar Temple to the Rosicrucians, are or have been used as fronts for extremely nefarious and horrific dramas.

In "State-sponsored Terrorism in the Western World" (NEXUS vol. 14, no. 2, February–March 2007), I highlighted that western governments had organised terrorist activities against their own citizens, often sacrificing the lives of innocent civilians for what they consider to be the greater good. In countries like Belgium and Italy, government inquiries revealed that a secret army, known as the "stay-behind network", had been staffed by their own citizens. In Belgium, it had taken orders from the Belgian State Security Service, the equivalent of the Russian FSB or the American CIA. The cell was code-named SDRA8 and was directly linked to NATO's stay-behind centres, the Allied Clandestine Committee (ACC) and the Clandestine Planning Committee (CPC). In Italy, a series of bombing campaigns in the 1980s left hundreds of innocent people—often commuters—dead and injured.

These campaigns were part of a "strategy of tension", a way to control and manipulate public opinion using fear, propaganda, disinformation, psychological warfare, *agents provocateurs* and false-flag terrorist actions, all carried out to scare the average citizen into the belief that communism was near and willing to kill. In truth, it was the intelligence agencies of the western world that killed and created a threat that was never real.

Though state-sponsored terrorism is now a commonly accepted fact for these episodes (though the role of the British government in Northern Ireland remains a hotly debated topic), what is less known is that what kept this international network of "government-employed terrorists" organised was a series of pseudo-chivalric organisations, which conspiracy theorists have largely failed to identify for what they truly are and which the "esoteric crowd" largely has embraced with love.

Knightly and Terrorist Overlaps in Argentina, Spain and Italy

One of the most prominent examples of a knightly overlap with the extreme right is the case of José López Rega, a leader of the Umbanda voodoo cult which was strong in Argentina in the 1970s. López Rega made his career in the ranks of the Argentinian federal police, but left the police force in 1961 at the age of forty-five. In 1965, he became acquainted with María Estela Martínez, the third wife of Juan Perón, who became enthralled by the occultist. He became her personal bodyguard, and soon after he became private secretary to President Perón himself. When Perón returned to Argentina in 1973, López Rega became a minister in his new government.

To "keep communism at bay", López Rega founded the Argentine Anticommunist Alliance (AAA), which was responsible for a series of brutal

murders. On 20 June 1973, more than 300 people were killed in Ezeiza. This and more meant that, in 1975, he had to flee to Spain, living in the Perón villa where he decided to bring the AAA to Spain. Together with Stefano Delle Chiaie, he began the fight against ETA, the Basque freedom fighters, and the rest is another sad history.

The knightly connections come in the form of López Rega being a prominent member of the Italian Freemasonic lodge Propagande Due (P2), which in Italy was linked with a string of terrorist activities that were discussed in detail in my previous article (referenced above). It was López Rega who brought the Peróns into contact with Licio Gelli, the P2 leader. Gelli became an adviser to Perón, and he was the only non-Argentinian on the aircraft that brought Perón back to Argentina.

Gelli and López Rega then founded the Argentinian wing of P2, the Pro Patria lodge. Immediately, high rollers from the military as well as government ministers were admitted. The organisation's primary agenda was to create ties with the oil and weapons industries. After Perón's fall, López Rega was often seen around Lake Geneva at Gelli's house, underlining the close bond which the two men had.

Order of the Solar Temple

The link between the stay-behind networks in Italy and P2 in Italy is not the exception. If anything, it is the rule. It is now clear that the stay-behind networks in various European countries infiltrated the knightly and freemasonic organisations: in Italy, it was a Freemasonry lodge that was targeted; in France, it appears that the Knights Templar of the Sovereign Order of the Solar Temple (Ordre Souverain du Temple Solaire, or OSTs), set up in 1952, was their main attraction.

In the 1990s, the Order of the Solar Temple (Ordre du Temple Solaire, or OTS), under the visible leadership of Luc Jouret and Joseph Di Mambro since its inception in 1984, committed a series of what has been officially classified as "collective suicides"—even though most of the victims were actually killed by bullet and/or asphyxiation. French officials have rather purposefully neglected all routes that could reveal a ghastly truth and instead have continuously focused on the cult aspect of the organisation. For example, it has twice tried Michel Tabachnik, a member of the OTS, for being responsible for agitating the Order so that its members committed suicide. Yet all experts consulted, as well as members of the "cult", stated that Tabachnik was innocent of such crimes. Twice a jury agreed, and twice Tabachnik was acquitted.

One of the experts in the story of the Solar Temple is

the French journalist Maurice Fusier. In one of his books on the subject, *Secret d'Etat?* ("State Secret?")¹, he explains where his lines of enquiry have taken him. For example, it has become clear that police and investigators purposefully neglected clues which showed that unknown persons aided if not executed the "collective suicides" (which, in France, took place in 1995). Trails suggesting that several hundreds of millions of dollars were moved from OTS bank accounts into what appears to have been Australia were intentionally not followed up during the investigation. Specifically, Fusier has identified that key figures within the OTS had direct links and access to the then French Interior Minister Charles Pasqua. Indeed, in the final weeks of the OTS's existence, members claimed and complained that they had been "infiltrated", and just before their deaths they sent their passports to Pasqua, apparently claiming that they felt he was responsible for what was about to happen. But how could a cult hold the

Minister of the Interior responsible for deaths that were officially of their own doing?

The theory of collective suicides has also been heavily contested by Alain Vuarnet, René and Muguette Rostan, Willy and Giséla Schleimer, who are relatives of the victims, and Dr Alain Leclerc, their lawyer. Their investigation has uncovered one document, a copy of a letter of 21 April 1997, addressed by a lawyer's office to

a bank, concerning the distribution of 17 million French francs (about 2.5 millions euros) between various personalities and political parties, the OTS and the Rosicrucian Order AMORC (Ancient Mystical Order *Rosae Crucis*). In his demand for a further investigation, Dr Leclerc (quoted by Fusier) wrote: "If the document is true, it shows that the Order of the Solar Temple was in activity after the last March 22, 1997 massacre [in Quebec, Canada] and that the leaders of this organisation are still alive." The court refused to investigate the letter.

If the OTS's demise was a "state secret", what was going on? Author François-Xavier Verschave has argued that the "collective suicides" were connected to Gladio, the secret NATO stay-behind network in Italy. Verschave may be echoing the opinions of Dr Jean-Marie Abgrall, an expert who was used during the investigations into the OTS and who was accused of violating these secret investigations as he spoke out of turn. He was not the only expert who was frustrated with the level of secrecy and the desire to bring some of this information into the media spotlight: another was French esoteric journalist Jean-Luc Chaumeil.

Abgrall repeatedly stated, in declarations to *Le Point* and *Nice-Matin* in February 2003, that the Renewed Order

...police and investigators purposefully neglected clues which showed that unknown persons aided if not executed the "collective suicides".

of the Temple (Ordre Rénové du Temple, or ORT) cult, the ancestor of the OTS and created in 1968, had relations with the Gladio network. Abgrall added that there were further relationships between AMORC, of which he was once a member, and the French networks in Africa, the so-called "Foccart network". According to Fusier, Abgrall concluded that "the Order of the Solar Temple, as well as AMORC and the ORT, was created and controlled by French and foreign secret services".

Other researchers have concluded that Luc Jouret, head of the OTS, co-operated with the far-right Belgian activist Jean-François Thiriart. In the 1970s, they founded an organisation whose goal it was to organise a split in the Communist Party of Belgium, forming the Parti Communautaire Européen, which then became the Parti Communautaire National-Européen. Bruno Fouchereau, author of *La mafia des sectes* ("The mafia of sects")² and a writer for *Le Monde Diplomatique*, alleges that this Belgium "Nazi-Maoist group" was actually controlled by the SDRA8, Belgium's branch of Gladio.

Observers have noted that there are many parallels between the OTS and the original "Templar Order" in France, the OSTs. A leading member of the OSTs was Constantin Melnik, head of the then French external intelligence agency SDECE. Melnik conceived the so-called La Main Rouge ("the Red Hand"), a group of state-sponsored terrorists that specifically operated in the Algerian War in the 1950s. Several terrorist attacks were attributed to this organisation and seen as attacks against the French state, whereas they were actually committed *by* the state—a so-called false-flag operation.

Melnik has since admitted his responsibility in the creation of the fiction of the Red Hand, but he has denied any involvement in the Templar story. Instead, he has pointed the finger at the KGB! He claims that, in 1958, it sent over people to the area he lived in, dressed up as Templars, in an effort to discredit him! As he was later repeatedly seen at the OSTs headquarters in Villié Morgon, near Lyon, his claims regarding the KGB, even if true, do not change his personal and extensive involvement in the OSTs.

What Constantin Melnik does not dispute either is that he received his training from the Rand Corporation, a company whose principal customer is the Pentagon. He also accepts that it was François de Grossouvre who was instrumental in his return to France in 1983. De

Grossouvre was the person in charge of Gladio in the Lyons region. Geoffroy d'Aumale and Jean-Pierre Faure, in their *Guide de l'espionnage et du contre-espionnage* ("Espionage and Counter-espionage Guide")³, claim the same. De Grossouvre would later commit suicide inside his office in the Elysée Palace, the residence of the French president, though many believe that he was "suicided".

Former members of the OSTs have noted that there definitely was a military aspect to the OSTs. Though there were mass gatherings of members in which apparently esoteric if not magical rituals were performed, there were also weekends of a slightly different nature.

One member stated that on one such weekend, a group was taken to a secluded valley in which their guides began to show them extremely high-tech machine guns which definitely came from a military arsenal.

They were asked to begin target practice, an offer which some of the OSTs members immediately declined and then most annulled their membership or let it expire. It therefore seems clear that the OSTs had always been, or at some point became, exposed to Gladio, and members were often unknowingly invited to begin to train as resistance fighters in the Gladio network.

Within the Gladio framework, the OTS begins to make more sense. If the OTS was part of the Gladio network, it would explain why it was led by Luc Jouret, a Belgian ex-military official with ties to Gladio. It explains the enormous sums of money that were transferred, and it explains what happened in the final days

of the OTS. If the OTS was a Gladio cell, it seems that the French Ministry of the Interior had indeed infiltrated this cell and may have been responsible for neutralising it (for Gladio was controlled by the CIA and NATO, not the governments of the countries in which it operated). One means of neutralisation is to kill all members...

The Quebec Connection

Gladio is often seen as a European network of NATO cells created to fight communism. But the OTS also had members in Canada. And it was while investigating the OTS suicides there that the Quebec provincial police force uncovered unrealised plans to set up a terrorist organisation for war against the Mohawk Nation! The Mohawk live around Lake Ontario and the St Lawrence River in what is now Canada and the United States.

Several terrorist attacks were attributed to this organisation and seen as attacks against the French state, whereas they were actually committed *by* the state—a so-called false-flag operation.

To make some sense of this story, it should be pointed out that the OTS in Canada was specifically linked with the electricity corporation Hydro-Québec. There were press reports that executives of Hydro-Québec were building dams at the behest of Jouret in order to provide electricity for a Québécois colony that would exist after the group's prophesied doomsday event. Of course, the doomsday prophecy could be seen as a smokescreen, the dam could be seen as a key economic initiative...and the Mohawk Nation's wishes might have been overridden in the pursuit of hard cash by the OTS and the like.

Fusier underlines that Di Mambro wired 93 million US dollars to Australian banks before his death. And it is little known that it is one Jean-Pierre Galipeau who claims that he is the heir to that money. Galipeau is Canadian. At first he appeared to Fusier as a potential attention-seeker if not con-man, but then Fusier entertained the notion that his claim could be true.

The story begins in 1995, when Canadian citizens were told to register any weapons in their possession. At first, this law was said to cost two million Canadian dollars, but eventually the price rose to two billion dollars! Galipeau claimed that apart from several scandals, there was also a group that the Quebec police had discovered in 1993, a year before the first OTS suicides. This group was a "pseudo-terrorist group" known as Q-37, which was identified as planning the assassinations of several leading Canadian politicians. It was then uncovered that there was a report in the newspaper *Soleil* (of all names!) on 7 April 1993 that Jouret had been pressuring women into training to shoot. The

report continued that a group that was known as Q-37 ("Q" standing for Quebec, and "37" being the number of founding members) was linked to the OTS and had already threatened Claude Ryan, Quebec's then Minister of Public Security. Two members of the group were arrested and charged with complicity in acquiring weapons and silencers. One of these was...Luc Jouret.

Jouret returned to Canada in August 1993 and was arrested, but he was given only a probationary sentence. Allegations of terrorism, murder, etc. had all disappeared and only the weapons charge remained. Was it because officially the Quebec government's hands were tied? Did the government instead have to come up with an "alternative punishment"? Were the OTS suicides the "real punishment" that Jouret received? (He died in the mass suicide in Switzerland in October 1994.)

That this may be the case comes from accusations from the Quebec police, who suspected that Jouret, along with his supposed involvement in an arms-trafficking ring, was involved in blowing up transmission towers belonging to Hydro-Québec (where Jouret had given inspirational seminars on business and self-realisation) and in leading Q-37. These accusations were hysterically denied in the Solar Temple's collective suicide note which accused Claude Ryan of belonging to the right-wing Catholic secret society Opus Dei.

AMORC Links

In the aftermath of the OTS suicides, most attention was focused on the group's Belgian "leader", but the group truly was more the child of Joseph Di Mambro than of Jouret. Whereas Jouret's background was largely military and he became a Knight later, Di Mambro had joined the Rosicrucian organisation AMORC in 1956. The official investigation into the mass suicides established an extremely close co-operation between the OTS and AMORC.

But the shady history of AMORC and the intelligence communities did not begin with the OTS. On 27 October 1972, an Air Inter Viscount aircraft crashed in the Loire. The subsequent official investigation did not clear up why the aircraft had crashed and missed its landing in Clermont-Ferrand.

By 1976, French journalist Serge Hutin argued that the remains of the aircraft suggested that it had suffered an impact with a projectile—that is, it had been deliberately shot down.

On board and one of the dead was Marie-Rose Baleron de

Brauer, one of the chiefs of the French Renseignements Généraux, based in Nice. She was Hutin's partner and wanted to give him a file. Specifically, she wanted to bring it to Clermont-Ferrand, where on 28 and 29 October AMORC's yearly Grand Conseil et Séminaire Magistral was being held. The president of the organisation was Raymond Bernard, and Baleron was AMORC's representative for the Puy-de-Dôme region.

Baleron's report, according to Hutin, detailed the links between AMORC, the CIA, P2, the Corsican Mafia, the SAC (Service d'Action Civique, France's Civic Action Service) and various other knightly orders. Hutin said that the report specifically concluded that the extreme right-wing organisations were hiding as esoteric and secret societies. The file showed details about their involvement in international terrorism and how it was

These accusations were hysterically denied in the Solar Temple's collective suicide note which accused Claude Ryan of belonging to the right-wing Catholic secret society Opus Dei.

organised. Hutin stated that Baleron had been able to show that the knights of the SAC, a parallel French police force, had links with Raymond Bernard and Julien Origas, the leader of the ORT, the Renewed Templar Order—another organisation closely allied with AMORC and the OTS. Because of the personal relationship between Baleron and Hutin, the French media could spend less attention on the revelation than it deserved. But Hutin had no reason to lie. And it is a fact that, in July 1974, Origas spoke in front of the ORT and said: "[A] woman had wanted to oppose the birth and the development of the ORT. She died in an accident."⁴ A rather interesting statement to make...

In 1975, Origas also held a series of meetings in Brussels, where he said that he saw that year as the beginning of a new era and the creation of a new super-race. He spoke of the Green Order and felt that it was under the control of Lucifer—all of them interesting comments to make, and which are likely not known to the rank and file of his Order!⁵

The lure of knightly or Masonic organisations is strong, with extravagant claims—like the one made at AMORC initiations that the Egyptian pharaoh Tuthmosis III was the founder of the Rosicrucians. In truth, the Order was formed in 1915 by Harvey Spencer Lewis in California. Contrast this with the notion that, in the 1980s, AMORC had 160,000 members in France and G. Buisson, the official spokesman for the Order in France, was proud to state that certain governments, especially in Black African countries, were under the control of AMORC.⁶

The Order of Malta

Today, there are hundreds if not thousands of pseudo and official knightly organisations. Amongst the official ones, the most notorious is the Order of Malta. Martin A. Lee, in his article "Their Will Be Done" (*Mother Jones*, July 1983), states that the American branch of the Order is one of the most important communication channels between the CIA and the Vatican. Indeed, the Order of Malta is able to transfer money in and out of countries to which neither the CIA nor the Vatican has access.

The Order of Malta is full of military and intelligence people, and its history in the 20th century truly begs a chicken-and-egg question: which came first—the money connections or the intelligence officials? The head of the Office of Strategic Services, the predecessor of the CIA, William "Wild Bill" Donovan, was a member of the Order of Malta, as was James Jesus Angleton, the CIA counterintelligence chief who was immortalised in the movie *The Good Shepherd*.

Others included William Casey, who was Director of Central Intelligence under Ronald Reagan. It is specifically Angleton who has been identified, in his role as counterintelligence chief, as the main organiser of Gladio in Italy.

Maybe unsurprisingly, therefore, is that Licio Gelli was a Knight of Malta, too. And what is less known is that he fought for Franco with Mussolini's Blackshirts. Indeed, at the end of the Second World War, Gelli was arrested and faced possible execution but was rescued by joining the US Army Counter Intelligence Corps. In the case of Gelli, it was therefore a world in which he was both a Knight and a Mason.

A Murky Truth

What has been portrayed as cult suicides, organisations of modern knights and the like is merely a smokescreen:

underneath is a sizzling pot of political machinations and intelligence agency shenanigans, often with the specific purpose of staging fake terrorist attacks or planning destabilisation campaigns.

When the European governments woke up to the reality of Gladio in the early 1990s, it was clear that none wanted to go deeper. But the picture as it continues to emerge, and which has been

portrayed above, is clearly still not the final truth. As no government has dared to stare into the abyss, it is likely that its depth will never be seen. ∞

Indeed, the Order of Malta is able to transfer money in and out of countries to which neither the CIA nor the Vatican has access.

LAETRILE VS CANCER AN AUSTRALIAN STORY

The success of alternative cancer treatments utilising amygdalin, vitamin B17 or Laetrile has been denied by the medical establishment and government authorities because it threatens the stranglehold of "the cancer industry" over our health care choices.

This article is not intended to give medical advice. I am not a medical doctor. The intention is to raise questions as to the vested interests of research results and testing methods. It is also a retelling of a personal account that should raise ethical concerns which demand answers. This article only reports and retells facts, research and statements from others who have been involved in cancer research. The purpose of this article is not to claim a cure for cancer; rather, it is an act of responsible freedom of speech that should raise questions that need addressing about the study of treatments for cancer. – SD'M

My father and his business partner were the first people to introduce Laetrile into Australia, 35 years ago. After my father did this, people suffering from various forms of cancer chose to use it and successfully treated themselves. However, testing was refused despite its apparent amazing results in thousands of cases, with many willing to give written accounts of their personal experiences. Since 1963, there have been over 100,000 cancer patients treated successfully with Laetrile and other alternative methods at the Contreras Hospital, now the Oasis of Hope Hospital, in Mexico alone. The late Dr Ernesto Contreras, Sr, was a vocal supporter of Laetrile treatment. This hospital is his legacy.

I, too, have been handed a legacy. As a twelve-year-old, I witnessed individuals identifying themselves as being from "Therapeutic Goods" approach my father with threats of financial ruin to try to dissuade him from importing and distributing this substance before any Australian legislation had been passed against it. More on this later.

When Laetrile was finally officially tested in Queensland, it was shown to be effective (see Queensland Health Circular No. 02/2003; replaced by Circular No. 01/2006). However, despite the testing and approval of Laetrile eight years ago, sufferers are still not being made aware of it as a possible effective alternative treatment, thereby curtailing their ability to make informed choices for their own health care. This is far from acceptable.

Before I proceed with telling my father's story in more detail, I should explain what Laetrile is and why it works.

What is Laetrile?

Laetrile is a name for vitamin B17, also known as amygdaline. Vitamin B17 occurs naturally in many foods including strawberries, cashews, cassava, apple seeds, and peach and apricot kernels, and can be consumed harmlessly from these sources. Many alternative practitioners claim that regular consumption of B17 can keep cancer at bay and is an effective treatment for many organ and skin cancers.

For 3,000 years, traditional Chinese medicine has used peach kernels, also known as bitter almonds, which contain significant quantities of amygdaline, in the treatment of tumours. Its effectiveness was so legendary that peaches are associated with immortality in Chinese culture.

Zhang Guo Lao, one of the Eight Immortals associated with health and healing, is depicted carrying a Peach of Immortality. Since 1843, various forms of this substance have been used in western medicine in the treatment of human cancer. Yet, in the 1970s, administrative bodies began actively opposing vitamin B17, amygdalin or Laetrile treatments as "potentially toxic" and heavily promoted undeniably toxic chemotherapy in their place, even though some studies show chemotherapy to be less than two per cent effective (Morgan *et al.*, 2004; Barton *et al.*, 1996).

Those who say that vitamin B17 is not a cure for cancer are technically correct. It is only the human body that cures cancer. In the same way it is the human body, not the taking of supplements of vitamin B1, which are given by injection or taken by mouth, that cures beriberi. Yet, the human body cannot cure itself of beriberi without vitamin B1 supplements. As I understand it, cancer cells are omnipresent in the human body and are only life-threatening when these get out of control. Vitamin B17 appears to be the switch to control these cells and keep them friendly. Deficiency in B17 may be a significant contributing factor to cancer cells becoming aggressive. The more we understand B17, the more it makes cancer look like it is a nutritional deficiency disease. Cancer is increasingly appearing to occur if we do not consume foods that are rich in nitrilosides/vitamin B17.

Hydrogen Cyanide and Enzymes

The studies of American biochemist Ernst T. Krebs, Jr, DSc, from the late 1940s, and many others through to the present who have duplicated his findings, show that vitamin B17 is in the cyanide family, but it is good cyanide. It is two parts glucose, one part hydrogen cyanide and one part benzaldehyde (an analgesic). Hydrogen cyanide is non-toxic when taken as a food or

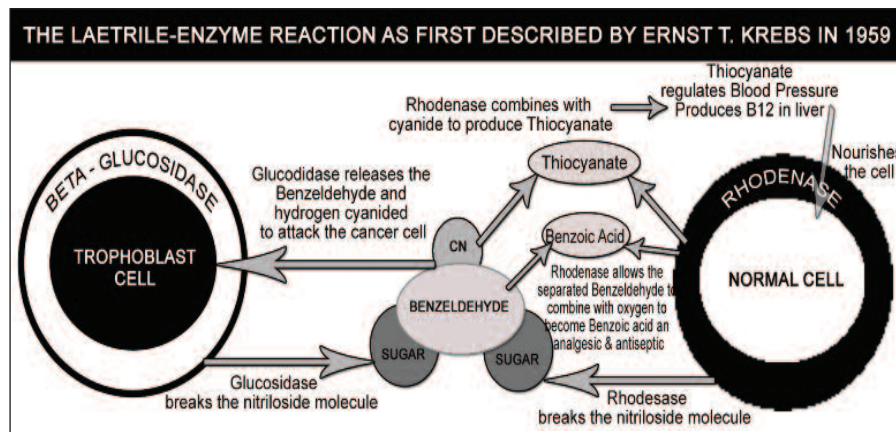

in controlled doses as a refined pharmaceutical. Commonly consumed substances such as salt and sugar can be up to 20 times more toxic.

Krebs claimed that the body breaks down B17 using the enzyme rhodanese, which changes it into thiocyanate and benzoic acid. These are beneficial, working with B12 to nourish the body. Excesses of these by-products are expelled from the body via urine. Krebs's work demonstrated that rhodanese has an inverse relationship to cancer cells: it is found everywhere in a normal healthy body, but not where cancer cells exist. However, the enzyme beta-glucosidase has a direct relationship to cancer cells and is found in very large quantities around them. If there is

no cancer in the body, there is no beta-glucosidase enzyme. However, when B17 comes into contact with beta-glucosidase that is present in large quantities around colonies of cancer cells, a chemical reaction occurs and the hydrogen cyanide and benzaldehyde combine to produce a poison which destroys only cancer cells. This process is known as *selective toxicity*. (See diagram.)

Why does one substance, Laetrile, appear to be selectively toxic against most cancers when there are hundreds of different kinds? Ernst T. Krebs, Jr, an honorary Doctor of Science, found that the only constant, the malignant or neoplastic component in all exhibitions of cancer, is susceptible to the Laetrile reaction's specific toxicity. This is the *trophoblast*. Trophoblast cells are primitive cells that have a fierce antithesis to all other cell types, including their somatic or hostal cells. Krebs (1993) wrote: "Cancer is trophoblast in spatial and temporal anomaly, hybridised with and vascularized by hostal or somatic cells and in irreversible and fiercely malignant antithesis to such." So, we are looking at any specialist cell that mutates into a typical, less evolved and more aggressive form. B17/Laetrile is thus a typical treatment for a typical cell type.

**Yet, in the 1970s,
administrative bodies
began actively opposing
vitamin B17, amygdalin or
Laetrile treatments as
"potentially toxic"...**

False Testing and Vested Interests

In 1972, the US Food and Drug Administration (FDA) commissioned its top doctor to conduct a study to provide evidence that Laetrile did not have an effect on cancer. The results proved the opposite. The study found that Laetrile inhibited the growth of tumours, stopped the spreading (metastasising) of cancer in mice, relieved pain, acted as a cancer preventative and improved general

health. At the time, Dr Kanematsu Sugiura was the senior laboratory researcher at the Memorial Sloan–Kettering Cancer Center. He reported in his experiments with mice that Laetrile was more effective in the control of cancer than any substance he had ever tested. This was not acceptable to his superiors. Instead of being pleased at the possibility of a breakthrough, they brought in other researchers to duplicate Sugiura's experiments to try to prove that they were faulty. Instead, the follow-up studies confirmed Sugiura's findings. Undaunted, his superiors called for new experiments, but following procedures which were designed to make the tests fail. Eventually they did, and it was only this failure that was announced to the world.

Ralph Moss, PhD, was a science writer and then the assistant director of public affairs at Sloan–Kettering at the time of the Laetrile tests. When he was ordered by his superiors to release false information about the results of those tests, he held a press conference in November 1977 in protest and was subsequently fired for "failing to carry out [his] most basic job responsibility" (Moss, 1994). Dr Moss later wrote a book, *The Cancer Syndrome*, about this scandalous situation, but it hardly raised an eyebrow in the medical world.

Follow the Money Trail

To make sense of something that seems bureaucratic and nonsensical, follow the money. The money says this: when a person is diagnosed as having cancer, as many as seven people are directly employed in their treatment. With hundreds of thousands of people being diagnosed with cancer each year, this ensures that seven times as many jobs are secured. Billions of dollars are poured into the fundraising process for cancer research, which is itself a huge industry employing thousands. A small percentage of those funds not used up in the fundraising process filter through to a self-perpetuating research process. How is it possible, under these circumstances, to remove a vested interest in *not* finding a cure from this huge, convoluted bureaucratic process?

Add to this that the drug companies have stockpiles of current treatments that are very toxic, are limited in their results and are fetching very good prices. This means that it would not be sensible to declare an easy, cheap, non-toxic and readily available solution, which requires little or no specialist training in its administration, as obtainable on the market any time soon. It could be seen as being contrary to certain

vested interests or justified as "not good for the stockholders". This untenable situation could be defended on the grounds of economic rationalism, i.e., "Let a few of them die for the greater good". Yet the reality is that one part of society is surviving on the suffering and death of the other.

Many people might believe that a serious, fraudulent, mass-life-threatening situation could never happen in modern times, yet I was an eyewitness to open statements that such shocking economic rationalism is a driving force behind the cancer industry.

A Family History

This story begins some 35 years ago when my father Geoffrey was the first person to import Laetrile into Australia. Dad was a partner in a new health foods company, and they were also the first in the world to sell flavoured mineral water. The market was wide open and my father had positioned himself well. At the time, Laetrile was not prohibited so it seemed like a good investment to add to his stable, but my father soon became aware of the overwhelming human need behind it. It was more than a mere product. Dad could see that it was really helping people. However, my father was soon to realise that he was an idealistic man in a far from idealistic world.

Dad ran the business from home. Our large double garage had become our stock room. He had two drivers and was responsible for the distribution. It was common for people to come to the home in order to conduct business with Dad. He would often do business deals

standing in the garage, sweaty from lugging boxes of stock. I was only twelve years old, yet I clearly remember some men in black suits with posh accents arguing with my father in the front yard of our house. I went outside to investigate the commotion. Dad was finishing a very intense, in-depth conversation with these men in black. They looked at each other and rolled their eyes. I clearly remember hearing them say, "You don't understand; we simply cannot allow you to import something that might *damage the cancer industry* if people begin self-prescribing" (my emphasis). My father rarely raised his voice or got upset, yet he swore at these men, told me to go inside and told them to leave. As I was going inside, I heard one of the men say to my father that if he refused to co-operate, they would ruin him and all of his businesses.

Instead, the follow-up studies confirmed Sugiura's findings. Undaunted, his superiors called for new experiments, but following procedures which were designed to make the tests fail. Eventually they did...

"Who was that?" I asked my father when he came inside.

"Representatives from Therapeutic Goods," he replied.

"What do they mean by 'the cancer industry'?" I queried.

"Cancer appears to be making a lot of people a lot of money," he stated. "Whenever obviously stupid decisions are made by men in power, the reason can be found by following the money."

I was so angry. I understood what they had meant before my father explained it, but I just couldn't believe it. These were people who were supposed to be altruistically looking out for our best interests; however, they revealed on our front lawn that they were serving the best interests of big business. It had vague *déjà vu* realism. At twelve, it was like someone telling me that my worst nightmares were real: that the bogeyman was real, was out to get everyone and made money out of letting people die. I don't think this anger has ever left me; it only grew as I observed what happened to my father, a truly altruistic man trying to help others.

Within a few weeks, these men in black began to make good on their threats. Legislation was swiftly passed that saw Laetrile busted down to a "Pet Food Only" licence. Yet people still bought it. When it became obvious that the health food stores were happy to keep stocking it in the pets section, Dad found that his service station licences were not renewed and that he was unable to buy bottles for his mineral water. Apparently there had been mass purchases by a subsidiary of Coca-Cola. Being the first person in the world to flavour mineral water, my father should have been a millionaire several times over, yet his ethics prevented him from selling out. Dad had to let this part of his business fall by the wayside.

Somehow Dad kept going. He kept supplying and distributing Laetrile. The demand for the product was overwhelming. The testimonies were flooding in for this much-needed substance, but they were disregarded by the authorities as merely anecdotal.

By the end of that year, 1976, B17 was completely banned in Australia. Yet banning a product does not stop people who have used it and had successful results with it from trying to procure it. People were turning up on our doorstep at all hours of the day and night, from as far away as Tasmania and New Zealand, begging for any stocks we might have left. It was heart wrenching.

Dad tried to appeal the ban and have B17 scientifically and clinically tested so that Therapeutic Goods would have no other choice but to approve it. Testing was refused on the grounds that there was no funding to proceed with tests. Ironically, billions of dollars are thrown at "the cancer industry" every year, yet Therapeutic Goods could not find the resources to investigate the successful results that people had achieved with B17/Laetrile.

It is curious that with all of the money and time given to cancer research, no solutions have been forthcoming. Shouldn't we be demanding to know *why*, after all of this time, these researchers still can't even tell us the most basic things about cancer, like how and why cancer begins? Yet, as shown here, Krebs's theory behind why Laetrile works purports that an answer to this question has been known since 1950—as has, additionally, a cancer solution.

Since then, other doctors and researchers have conducted studies and have had papers published that conclude in favour of Laetrile; these include Dr John Morrone, Dr Manuel Navarro, Burton Goldberg, Dr Robert Atkins, Dr Ernesto Contreras, Dr Michael Schachter, Dr Douglas Brodie and Dr Philip E. Binzel, Jr. The body of evidence *for* Laetrile's effectiveness and safety far outweighs the evidence against.

Within a few weeks, these men in black began to make good on their threats. Legislation was swiftly passed that saw Laetrile busted down to a "Pet Food Only" licence. Yet people still bought it.

Legal Recognition of Laetrile

There has been some progress in Australia since the mid-1970s ban, yet information about Laetrile's benefits has not been getting through to the general public, let alone to most medical practitioners who treat cancer.

If you wish to obtain a legal permit to obtain and use Laetrile in Australia, you must proceed with caution as the regulations and permits contain ambiguous language used to protect the departments involved.

It is possible to obtain Laetrile/B17/amygdalin in Australia legally, whether from local or foreign sources, by applying to the Therapeutic Goods Special Access Scheme in Canberra. (Download "Category A Form Special Access Scheme" from <http://www.tga.gov.au/docs/pdf/unapproved/sascata.pdf>, complete it with your medical practitioner and fax it to [02] 6232 8112. Check <http://www.tga.gov.au> for additional details.)

However, at least in Queensland, having a TGA import permit for Laetrile does not allow you or your doctor to possess or use it: the legislation stipulates that you must obtain specific approval from Queensland Health.

Back in 2003, Queensland Health confirmed that it had issued a small number of approvals to doctors to treat their patients with amygdalin/B17/Laetrile under strict guidelines. This was one step in the right direction. However, in 2006 it tightened the regulations, deciding not to issue approval for treatment with oral amygdalin but only for intravenous or intramuscular treatment (see Queensland Health, Circular No. 01/2006).

Patients to be treated with amygdalin have to be informed of the following (and agree to it in writing): that the process by which the amygdalin is manufactured may not be subject to quality control; that there is potential cyanide toxicity associated with amygdalin; and that there is a lack of scientific evidence relating to the efficacy of amygdalin. As we have seen, the second and third of these issues have been repeatedly addressed by respected members of the scientific/medical community. One reason given in the 2006 Queensland Health circular to warrant all of this over-stringent control: a possible side effect of a high temperature! It's two steps forward, one step back!

In Queensland, the patient must obtain a form, titled "Drugs and Poisons: Application for Approval to Obtain, Possess and Use Amygdalin – Informed Consent", from Queensland Health (see <http://www.health.qld.gov.au>). The patient must then complete the form and sign it with their oncologist, who must then fill out and submit a form titled "Application by a Medical Practitioner for Approval to Obtain, Possess and Use Amygdalin". Check the website for further guidelines.

If you are not in Australia, strive to make yourself aware of the legislation surrounding the use of amygdalin/B17/Laetrile in your own country. You may be surprised. I believe that it is legal to use amygdalin in the treatment of cancer in Mexico, Canada and some European countries. I also understand that the traditional practice of using the stone fruit kernels has never stopped in many Asian countries and has remained the standard form of first-line anti-cancer therapy. I would be very interested if any readers could send me the current legislation from their respective countries.

To take this forward, we need to organise and sign petitions and email government health departments and authorities, demanding our right to self-determination on access to Laetrile, in all its forms, given the many studies confirming its safety and effectiveness. Remember, no matter what law any authority makes, your health is *your* responsibility. You have the right to make informed choices in matters

concerning your body and your health. The authorities exert Draconian control over our health freedoms, and we must let them know that we are very unhappy with this situation.

If enough people demand that amygdalin/B17/Laetrile be more freely available, the more likely that the onerous, ridiculous restrictions will be lifted on the use of Laetrile.

The powers-that-be will finally have to loosen their stranglehold on "the cancer industry". ∞

About the Author:

Reverend Dr Shé D'Montford is a teacher, healer, author, promoter and activist as well as a former Queensland business woman of the year. She is a member of the Australian Association of accredited Alternative & Natural Therapists (AAANT) and runs the Australian Shambhalla

Awareness Centre in Helensvale, Queensland. Her previous contributions to NEXUS are "Tibetan Buddhism and The Great Game" (13/05) and "Unveiling Tibetan Buddhist Propaganda and Atrocities" (12/04).

Dr D'Montford can be contacted by mobile phone on 0402 793 604 and by email at shambhalla@y7mail.com. For more information, visit <http://www.shambhalla.org>.

THE FUTURE OF THOUGHT COMMUNICATION

Brain-to-computer interface technology paves the way for instantaneous thought transfer and a new form of communication between people, leading to the prospect that the spoken language may one day become obsolete.

Technology to Think About

More than 6.6 billion people live on this planet, and not one of us ever really knows what our family, friends or neighbours are thinking or feeling. When you think about it, the most intimate relationship you have is with your mind. At this very moment, you are reading what were once my thoughts. You might be sitting at home, on your sofa or bed, or maybe you're travelling on public transport. Look around you: no one knows what's going on in your head right now. Can you imagine how different our lives would be if we could interpret the thoughts of those around us, if we could communicate mind to mind?

Telepathic communication might sound like the ultimate invasion of privacy, but you only have to take a peek at some of today's mobile phone and Internet technology to realise that we are already connecting in ways that the human race has never before experienced. Instant messaging services and social networking websites such as Facebook, Bebo and Twitter have enabled us to share our thoughts and feelings in real time.

Today, the computer keyboard is merely an extension of the mind. Take away the cables and monitors, and you soon realise that we have at this moment laid the groundwork for the exchange of information by way of thought. It would seem that the spoken language of the human species could be nearing extinction.

For decades, people have been fascinated by the concept of "six degrees of separation"—that we can be linked to every other person on the planet in just six steps or introductions—and, in recent years, Internet applications have provided researchers with the tools to conduct large-scale studies on our connectedness. In 2008, Microsoft put the six-degrees theory to the test: a study of 30 billion MSN conversations among 240 million people around the world revealed that it would take an average of just 6.6 steps for them all to be connected.

Today, scientists and researchers are developing technologies that may one day lead to new forms of human-to-human communication. They are confident that future generations will be able to communicate mind to mind through technology-enabled telepathy, or tech-lepathy. While mind-to-mind communication might be a little way off, brain-to-computer technology is already in development, and over the coming years we will see it increasingly being used to assist people with disabilities, in particular those who are "locked in".

Locked-in patients, such as those with amyotrophic lateral sclerosis (also known as ALS or Lou Gehrig's disease) are trapped in their bodies, unable to move or speak. Early trials of brain-computer interface (BCI) technology have made it possible for some locked-in patients to communicate with their family and caregivers; they have been able to write emails and produce documents using a word processor.

Wired with BrainGate Implants

Brain-computer interface technology is also being utilised in a project known as BrainGate™. In the late 1990s, Cyberkinetics developed the BrainGate implant, a BCI that could be attached permanently to a patient's brain. In 2004, Matthew Nagle, a 26-year-old quadriplegic man, became the first person to receive the BrainGate implant. It was placed on the surface of his brain and included an external device on his skull that could be connected to a computer. When he was plugged in, Matthew could play video games using his brain as the controller. He could move a computer cursor around a screen and manipulate a robotic arm.

In his 2009 book *Wired for Thought*, BrainGate chairman Jeffrey M. Stibel outlined how BrainGate might be used in the future: "At roughly one-third the size of a penny, our implantable device directly attaches to neurons in the motor cortex of the brain. It uses one hundred electrodes roughly the width of a human hair to record brain activity across a small number of neurons. Although BrainGate requires brain surgery, the performance is like nothing before seen. Once the device is implanted, people are able to literally turn thoughts into action..."

"As with any great innovation, the lines of science and science fiction are being blurred. There is now a real possibility of downloading 'memory implants' or retrieving information wirelessly from the Internet. Recall that the Google founders envisioned a future with 'the entirety of the world's information as just one of our thoughts'. We may be getting a bit ahead of ourselves, but that future may become a reality with BrainGate.

"This technology has the potential to be revolutionary for those who are severely disabled. It will enable bionics, restore speech, and give disabled people unimaginable access to a world that the able-bodied take for granted. How will BrainGate change the world for the rest of us? I can't say, but it is fun to imagine."

Computer Games and Virtual Worlds

While BCI technology is still being developed for medical purposes, the gaming world has already produced its first such device. In 2008, the EPOC headset was unveiled at a Game Developers Conference in San Francisco. The headset, which was developed by Emotiv Systems, is based on electroencephalography (EEG) and uses a set of sensors to tune into the brain's electric signals. The Emotiv EPOC enables players to control games using only their mind, and it is set to revolutionise the gaming world.

Emotiv Systems' president and co-founder Tan Le told me in an interview² that, in the future, brain-computer interface technology will have far broader implications "...in the way that you surf the Internet, in the way that you experience content and interactive content on your TV, in the way that you experience your environment in the home, with your appliances, all the way through to medical and health care applications where you can monitor your health".

Tan Le further explained: "At the moment, if you look at the way that we interact with machines, it's very limited, it's very one directional: you give a command to a machine or computer and it does that task for you. Even if you give it a multitude of commands, it's still very directive, but when you look at communication between people on the other hand, it's far more interesting because we take into account so much more

than is explicitly expressed: we observe facial expressions, we can intuit emotions through our dialogue with each other.

You walk home one day and your partner says 'Hey, why are you so happy?' or 'What happened at work today? You don't seem to be in such a good mood'.

They can see that from just observing you, without you having to say anything, and this is the realm that doesn't exist at all for machines and the way

that we interact with machines today.

"And so, one of the things at Emotiv, our vision for the next generation of interaction between humans and computers is that it will evolve beyond the limits of conscious inputs, and this whole new realm of total communication will play a part where machines and computing applications will start to have an insight into how you experience information, how you experience content, and will be able to dynamically present information and change information to really tailor itself to you."

If technology-enabled telepathy were ever to become a reality, Tan Le believes it would develop as an extension of the virtual worlds, such as Second Life, that exist today: "I think the Internet is a way for breaking down barriers to connecting and interacting with people, and having a device like this where you have a much better way of being able to show the way that you feel, express yourself far more naturally through an avatar-based environment, that allows you to have a better insight into people's perceptions, experiences, and allows you to relate, even through an avatar-type environment.

"There's always an issue of privacy associated with things like this. How much information are we

The Emotiv EPOC enables players to control games using only their mind, and it is set to revolutionise the gaming world.

comfortable with sharing? But I think there is certainly scope in the future for a better level of understanding to be reached.

Over the last few years in doing this research, we've come to realise that there are so many similarities across cultures, across genders, in terms of the way that we actually respond to human beings. It's definitely a very interesting observation to see that whilst there's so much individuality, there's still a lot of commonality in the way that we experience emotions, and so there's a lot to be said in terms of trying to find a common dialogue for everyone and a better understanding from that."

Subvocal Speech System

The National Aeronautics and Space Administration (NASA) in the USA is also developing a new technology that might one day provide the foundation for a form of synthetic telepathy. In 1999, NASA scientists at the Ames Research Center began work on a "subvocal" speech program. Unlike the brain-computer interface, which requires an EEG cap or brain implant to interpret the brain's electrical activity, the subvocal speech system is able to decipher thought by connecting sensors to the speech muscles.

The NASA team has found that by placing small sensors under the chin and on either side of the larynx, they can collect nerve signals from the movement of the tongue and vocal cords. To communicate, a person wearing the sensors only has to speak to himself or herself, without moving the mouth or making a sound. As the person silently speaks, the brain sends an electric current to the speech muscles, which is in turn converted into text.

Dr Charles Jorgensen, the Chief Scientist for Neuroengineering at NASA, has described the subvocal speech system as a "voluntary" form of communication for users.

He explained in an interview:³ "For me, telepathy would imply the ability to obtain inner thoughts without the clear permission of the user. Subvocal speech must by its nature be voluntary and only picks up words whose physiological commands to the articulators have already been sent to the tongue or larynx. This is one of its desirable features, in my opinion, since it preserves privacy."

The NASA team initially developed the subvocal

system to assist astronauts in very noisy environments. However, Jorgensen is confident that in the not-too-distant future it will be used for a number of applications. "The technology would most likely be used for situations with high noise such as fire-fighters in pressurised gear, military environments when silent communication with small numbers of words are needed, or for specialised use by individuals with speech handicaps and limited communication capability.

The obvious extension, given increased vocabulary, would be for a silent cellphone or in teleconferencing," he suggested.

Unlike the brain-computer interface, which requires an EEG cap or brain implant to interpret the brain's electrical activity, the subvocal speech system is able to decipher thought by connecting sensors to the speech muscles.

Military Interest in BCI Technologies

The United States Army is particularly interested in the development of brain-to-computer and brain-to-brain technologies and is currently working on a number of projects that might one day be used by military personnel. Researchers at the University of California, Carnegie Mellon University and the University of Maryland have received a grant to develop a brain-to-computer system that will enable dispersed ground forces to create email and voice mail without the use of a keyboard or sound.

Meanwhile, another US Army project is expected to take the technology one step further, and it could pave the way for the eventual development of mind-to-mind communication. In 2009, the Pentagon's Defense Advanced Research Projects Agency (DARPA) received US\$4 million to start a brain-to-brain program called Silent Talk.

According to US Defense Department documents: "Silent Talk will allow user-to-user communication on the battlefield without the use of vocalized speech through the analysis of neural signals. The brain generates word-specific signals prior to sending electrical impulses to the vocal cords. These signals of 'intended speech' will be analyzed and translated into distinct words, allowing covert person-to-person communication.

This program has three major goals: a) to attempt to identify electroencephalography patterns unique to individual words, b) [to] ensure that those patterns are generalizable across users in order to prevent extensive device training, and c) [to] construct a fieldable pre-prototype that would decode the signal and transmit over a limited range."⁴

Thought Transfer from Person to Person

In 2009, researchers at the University of Southampton, England, successfully demonstrated communication from person to person via thought alone. Here's how it worked. The first person had EEG electrodes attached to the scalp. The brain activity was picked up and amplified using an EEG amplifier, and was then sent on the Internet through a PC. The first person transmitted a series of binary digits, imagining moving the left arm for "zero" and the right arm for "one".

The second person was also connected to an EEG amplifier; that person's PC picked up the stream of binary digits off the Internet, then flashed an LED lamp at two frequencies: one frequency for "zero" and another frequency for "one". The second person simply watched the flashing lamp.

Throughout the entire experiment, the recipient was unaware whether a one or a zero had been transmitted. However, through that person's brain activity alone, the PC was able to decipher whether a zero or a one had been transmitted.

According to Dr Christopher James, then working with Southampton University's Institute of Sound and Vibration Research, BCI is now moving briskly forward and many labs around the world are developing and using BCI as a communication device.

He explained: "We are by no means 'there' yet; many issues remain: reliability [most BCI systems are still lab-based]; the debate of implanted versus scalp-attached electrodes still is unanswered—there are pros and cons to either case.

"People need to think outside the box more, too, in terms of how BCI is used. In the future, I expect to see a certain amount of standardisation, and with the advent of smaller, cheaper electrodes and smaller, longer-life power sources, BCI will be talked of the way cochlear implants are talked of today—no longer a 'bionic' thing of wonder but a system that is in routine use and making a difference worldwide. In 2030, BCI users will not only include those with severe clinical needs, but athletes and performers could be using a different type of BCI to hone their skills. The games market could be revolutionised the way the Wii has revolutionised gaming today through the use of accelerometers.

"I don't think it would be used to drive cars, but it may be popular to write long texts using a neural interface. We know it can be done, and the technology is not too

onerous—we just need it to be faster and more accurate. Think of voice recognition systems and handwriting recognition systems at their inception: they showed lots of promise, and now they are here with very good recognition rates."⁵

Network-Enabled Telepathy

What we are seeing at the present time is the emergence of what might one day be a completely new form of communication. In the 10 years since work first began on the development of brain-computer interface technology, researchers have created systems that can manipulate objects on a computer screen, systems that can control artificial limbs and others that can convert intended speech or thought into text.

The former program manager at DARPA, Stuart Wolf, has predicted that one day we will communicate via what he calls "network-enabled telepathy", or instant thought transfer.⁶ Wolf predicts that our thoughts will transfer across a network directly into another person's brain, and that two-way, mind-to-mind telepathic communication will become a reality.

Kevin Warwick is the Professor of Cybernetics at The University of Reading, England, and the world's leading expert in cybernetics. Warwick believes that some time this century we will develop mind-to-mind telepathic communication. "At present our method of communication, speech, is very slow, serial and error prone. The potential to communicate by means of thought signals alone is a very exciting one. We will probably have to learn how to communicate

well in this way, though; in particular, how to send ideas to one another. It is not clear if I think about an ice cream, are my thoughts roughly the same as yours? We will have to learn about each other's thoughts. Maybe it will be easier than we think, maybe not. Certainly speech is an old-fashioned, outdated means of communication—it's on its way out!"⁷

So, how would the development of mind-to-mind communication change society? I think Sir William F. Barrett summed it up nicely in his 1918 book *On the Threshold of the Unseen*.

Sir William wrote about the social justice that he believed would inevitably follow if telepathy were to transpire:

Wolf predicts that our thoughts will transfer across a network directly into another person's brain, and that two-way, mind-to-mind telepathic communication will become a reality.

IS ALZHEIMER'S DISEASE CAUSED BY PARACETAMOL?

Within two decades of the introduction of the analgesic drugs phenacetin and paracetamol in the 1880s, the first cases of Alzheimer's were described, and subsequently the disease rate rose sharply. Fortunately, natural medicine offers a solution.

by Walter Last © 2011

Website:
www.health-science-spirit.com

At first glance, it sounds far out to link Alzheimer's disease (AD) to an apparently harmless over-the-counter analgesic (pain reliever) and antipyretic (fever reducer). Paracetamol is called acetaminophen in the United States and Canada, and is often sold under the brand name Tylenol®. In Australasia, Africa, Asia, Europe and Central America, Panadol® is the most widely available brand.

As opposed to non-steroidal anti-inflammatory drugs (NSAIDs) such as aspirin, ibuprofen and naproxen, which reduce pain and inflammation mainly by local action, paracetamol has recently been shown to work mainly by affecting the brain, where it blocks the reuptake of analgesic cannabis chemicals or endocannabinoids. This only reduces pain without improving inflammation. It also gives us an indication as to why paracetamol is more likely to be associated with a degenerative brain disease than are NSAIDs with their mainly local mode of action and anti-inflammatory properties.

That paracetamol is far from harmless can be seen in its tendency to cause kidney and liver damage. Overdosing with paracetamol/acetaminophen is the most common cause of acute liver failure in the United States and other western countries. Paracetamol has a very narrow therapeutic index (ratio of the toxic to the therapeutic dose). Therefore it is easy to overdose with paracetamol, and most liver damage results from unintentional overdoses, although intentional overdosing (suicides) is also common. The maximum recommended daily intake is four grams, but this amount already tends to cause liver damage. Since 2009, the US FDA has been contemplating reducing the recommended maximum dose. Paracetamol overdose results in more calls to poison control centres in the United States than does overdose of any other pharmacological substance. Paracetamol is especially toxic to the liver if taken together with alcohol, and then it can easily be fatal. If taken during pregnancy, paracetamol can cause infertility in boys. Untreated, overdose can lead to liver failure and death within days. The antidote for paracetamol overdose is acetylcysteine (also called N-acetylcysteine or NAC). It is a precursor for the antioxidant glutathione which helps the body to prevent liver damage. Paracetamol is also lethal to cats and snakes.¹

However, until the 1970s, phenacetin was the preferred analgesic; it was converted in the body to paracetamol as its active ingredient. In the 1940s, there was a sharp increase in gastric ulcers in young women in Australia, especially in Queensland and New South Wales, followed in the 1960s by an epidemic of kidney failure. At that time it was also recognised that these events were related and were induced by analgesics, in particular by the addictive consumption of Bex® Powder. Originally, Bex contained aspirin, phenacetin and caffeine but in 1976 phenacetin was replaced with paracetamol. It was addictively used by women of all ages—especially housewives, who were encouraged to have "a cup of tea, a Bex and a good lie down"—and it was also the mood-altering drug of choice for young women.²

The Alzheimer's Connection

From the 1880s, phenacetin, an aniline derivative, was widely used as an analgesic. The consumption of phenacetin and other analgesics increased steeply after World War II. In 1971, the first paper was published that linked high use of phenacetin with the development of Alzheimer's disease.³ Autopsies were performed on a series of individuals who had died of kidney disease caused by high intake of analgesics (analgesic nephropathy). Senile plaques were found in six individuals aged from 52 to 67 years who had lifetime high intakes of phenacetin, while no plaques were seen in two subjects aged 68 and 72 years who had consumed similar amounts of aspirin but no phenacetin over their lifetimes. These findings do not only apply to phenacetin itself, but also to its active metabolite paracetamol which eventually replaced phenacetin because of its lower kidney toxicity.

The Abstract of this 1971 paper reads: "Psychometric and psychiatric studies on eight patients who had abused compound analgesics containing phenacetin showed that four had definite evidence and two possible evidence of organic dementia. Neuro-pathological studies on nine other analgesic abusers disclosed a surprisingly high incidence of the histological features of Alzheimer's disease.

It is suggested that gross abuse of phenacetin may overwhelm the antioxidant protection of the body, leading to premature deposition of lipofuscin, and accelerated neuronal ageing."

This study was not followed up by other researchers or health agencies. But some time later, a "strange" incident happened to Robert Jones, PhD, that made him dig more deeply into the possible link between paracetamol and AD. Dr Jones worked mainly as a British cancer researcher who fell out with the establishment when he published his protocol for the treatment of cancer with promethazine, an antihistamine also known as Phenergan®.⁴ Twenty years ago, he took paracetamol for about 10 days to alleviate pain while painting his house. Two weeks later, he noticed short- and long-term memory problems. Gradually these improved again, but 10 years later the same sequence repeated itself. That pricked his curiosity and he started looking into a possible connection between paracetamol and AD. The result of his research was an article in *Medical Hypotheses* in 2001.⁵ This did not make much of an impact, and so he recently wrote another article, "Does placing the histories of certain analgesics and Fischer–Alzheimer's disease (F–AD) in relative alignment reveal connected

pharmacological risk factors?"⁶ But this time the paper was not even accepted by a medical journal.

Timelines of AD and Paracetamol

The term Alzheimer's disease was coined in 1910 for an unusual form of early-onset dementia. It had been independently recognised in 1901 by Oskar Fischer in Prague and then by Alois Alzheimer in Frankfurt. Fischer's first patient died in 1903; Alzheimer's in 1906. The cortex of each patient showed rare plaque-like lesions. Both published their findings in 1907. Despite intensive search, only 12 instances of plaques in dementia patients had been found before 1907. Over the next five years, 115 new cases were discovered; Fischer described 56 of these.

Compare the timing of these events leading to the recognition and definition of AD to the introduction and use of phenacetin. Both phenacetin and

paracetamol were first tried on patients in 1887. At that time, phenacetin became the preferred drug, and its sales established Bayer as a leading pharmaceutical company. Originally, very high doses were recommended by some doctors. Use of phenacetin spread internationally on a large scale as a result of the 1889–90 Asiatic influenza pandemic. At the same time also, its kidney toxicity became apparent. By

...the introduction and widespread use of phenacetin preceded the sudden appearance and explosive spread of AD by one or two decades.

comparing the two timelines, we see that the introduction and widespread use of phenacetin preceded the sudden appearance and explosive spread of AD by one or two decades. Also, these early AD victims typically displayed the kidney damage characteristic of phenacetin overuse. Another indication of a possible causal connection is the statistical fact that presently paracetamol use and AD incidence are almost twice as high in women than in men.

Originally, phenacetin and later paracetamol were mainly used and produced in industrialised countries and that is where AD initially flourished. But in more recent years (2008) production has stopped in Europe and is now mainly based in China and India which presently also have the highest projected growth rates of AD. The estimated annual world production of paracetamol is about 145,000 tonnes. That is an awful amount of tablets to swallow, and, at the maximum dose of four grams per day, sufficient to control the chronic pain of about 100 million people. It also shows us where the incidence rates of AD may be heading; in 2010, about 35 million cases of AD exist worldwide.

So far, indications are that a high intake of paracetamol for extended periods is required to lead to

the development of Alzheimer's disease. In one study, the use of paracetamol in dementia patients was found to be higher, at 51 per cent, compared with 21 per cent in non-demented controls. In some more recent studies, aspirin and other NSAIDs had a moderately protective effect on the development of AD, but paracetamol use of more than two years increased the risk by about 50 per cent. However, these were short-term studies and it was not specified if paracetamol use was occasional and light, or chronic and heavy.⁶

Other Contributing Factors

We may assume that the risk of developing Alzheimer's disease is a function of several factors, including the lifetime intake of paracetamol, the ability of the liver to detoxify the substance, and the ability of the kidneys to excrete the residues. Therefore someone with liver or kidney damage, or burdened with the ingestion of other drugs, or exposed to mercury, can be expected to develop AD at much lower doses than someone who is reasonably healthy and does not normally use any other drugs.

There are three metabolic pathways in which the liver can detoxify paracetamol, and one of these pathways can produce a toxic metabolite which may accumulate with high intakes and certain genetic and metabolic conditions. Therefore it is clear that the accumulated dose of paracetamol which may trigger AD can be expected to vary widely between individuals.

Furthermore, there is no reason to believe that paracetamol may be the only drug or environmental chemical that can cause AD-type brain damage. Not only individual drugs and chemicals but combinations of them may cause or contribute to AD. We do not know anything about this; so far, no one has investigated.

One telling example is the "accidental" finding that small amounts of the common herbicide paraquat and the fungicide maneb are apparently harmless when fed to animals individually but when given together to rats and mice, even at very low rates, they produce the symptoms of Parkinson's disease. These chemicals are widely used in farming and may remain present as crop residues. The leader of the research team said: "No one has looked at the effects of studying together some of these compounds that, taken by themselves, have little effect.

This has enormous implications... It's a huge problem to start thinking about a nearly infinite array of mixtures of chemicals, instead of the risk that a single chemical might pose."⁷

Perhaps residues of paraquat and maneb also cause or contribute to the development of AD. Who is responsible for finding out and allowing only safe combinations of drugs and chemicals into our food chain? Obviously, the safe way to minimise our chances of developing AD is to minimise our exposure to all drugs and questionable chemicals! Even occasionally taking relatively harmless drugs to treat insomnia and anxiety has recently been shown to increase mortality risk by 36 per cent, and widely used NSAIDs increase the risk of a stroke by up to 86 per cent while also increasing the overall death rate.⁸

We have government health agencies that are supposed to ensure the safety of drugs. So far, after over 100 years of medical use, no proper safety checks have been made for phenacetin or paracetamol, especially in regard to the possibility of causing or contributing to AD. For that matter, no proper safety checks have been done for other drugs, either. Drug companies are just required to do some short-term

studies with single drugs and often on healthy individuals. From this, the medical system deduces in an act of magical thinking that such drugs are then safe when used in the long term or for a lifetime, and/or if used by individuals with weak liver or kidney functions, and/or with impaired metabolic or detoxifying abilities, and/or when used in combination with various other drugs and

chemicals. In a few cases, drugs may be curtailed or withdrawn after a few decades when sufficient numbers of patients have needlessly died, but overall no one knows how much morbidity or mortality is caused by long-term drug use in varying combinations for different conditions.

One class of drug that does frequently cause deterioration or loss of memory is the statin drugs prescribed to lower cholesterol levels. Dr Duane Graveline, a former NASA astronaut and US Air Force flight surgeon and a retired family doctor, wrote that he suddenly had a temporary complete loss of memory after six weeks of using Lipitor®. He collected statements from others who had been similarly affected.

Therefore someone with liver or kidney damage, or burdened with the ingestion of other drugs, or exposed to mercury, can be expected to develop AD at much lower doses than someone who is reasonably healthy...

It has been proposed that high or elevated cholesterol levels protect the brain from deterioration.⁹

Other frequently claimed causes or contributors to the development of AD are lack of long-chain omega-3 fatty acids, specifically DHA, mercury from dental amalgam, seafood and vaccinations, and aluminium from cookware, baking foil, processed foods, baked goods, baking powder, brewed drinks, drinking water, some antacids, and antiperspirants. Other factors are mentioned as being lead, mobile phones/cellphones, solvents, fungi and parasites, sugar, chlorinated water, inhalant anaesthetics, and excitotoxins such as monosodium glutamate (MSG). A good overview of these factors with some references is at "Alzheimer's Disease: On Suggested Causes and Cures".¹⁰

Biostatistician Bernard Windham collected hundreds of scientific references on the toxic effects of mercury and also aluminium as a cause of AD and other neurological and autoimmune conditions. Accordingly, major factors in the neurotoxicity of mercury are decreased levels of glutathione peroxidase and superoxide dismutase which lead to increased lipid peroxidation in the brain. Even a few micrograms of mercury can severely disturb cellular functions. Mercury also accumulates in the mitochondria and interferes with their vital functions, especially by inhibiting cytochrome C enzymes and reducing energy supply to the brain.¹¹

In regard to mercury and aluminium in vaccines, we can read: "A study of people who received flu shots regularly found that if an individual had five consecutive flu shots between 1970 and 1980 (the years studied) his/her chances of getting Alzheimer's Disease is ten times higher than if they had one or no shots".¹²

The Niacinamide Cure

In a study of mice with induced AD, it was found that their full memory was restored after treatment for four months with the human dose equivalent of 2,000 to 3,000 milligrams of niacinamide, also called nicotinamide or vitamin B3. Niacin, or nicotinic acid, belongs to this group as well but it tends to induce flushing and some may be reluctant to take it, although it is the recommended form to lower cholesterol and triglycerides in the blood. "Cognitively, they [the mice] were cured," commented the leading researcher.

"The vitamin completely prevented cognitive decline associated with the disease, bringing them back to the level they'd be at if they didn't have the pathology." In addition, niacinamide also improved the memory of mice without AD. Presently, there are several human trials with niacinamide in progress.¹³

It is no real surprise that vitamin B3 is beneficial because it works also with many other conditions, such as improving or normalising schizophrenia, senile conditions, arthritis, hyperactivity or behavioural and learning difficulties of children, cholesterol problems, cancer, dermatitis, juvenile diabetes, fatigue and lack of energy.¹⁴ The reason why a single vitamin can help with

all of these problems is its key role as a coenzyme in oxidative cellular energy production.

If certain areas of the brain or the body are congested with metabolic waste products or for other reasons have reduced blood supply, then energy production in that part of the body is reduced. The brain needs 20 per cent of our total energy to function properly and therefore is especially sensitive to lack of energy.

An indication of the degree of biological ageing is the amount of lactic acid accumulating in the brain.

This is especially pronounced with degenerative brain diseases such as Alzheimer's disease and Parkinson's disease.¹⁵ Lactic acid is formed when the oxidative energy production in the mitochondria, the powerhouses inside cells, declines. In AD, niacinamide-dependent enzymes have been shown to be deficient.¹⁶ Getting more niacinamide into congested brain cells helps to rev up energy

production and lets these cells function more normally.

There may be an additional reason related specifically to paracetamol in its function as an antipyretic. This means that paracetamol lowers the body temperature, and it may do this by lowering the temperature in a specific part of the brain by reducing the energy metabolism in that area. Niacinamide has the opposite effect: someone who does not produce enough body heat and easily feels cold, with cold hands and feet, can often improve or overcome this problem by taking high-dose niacinamide supplements. However, even if niacinamide works as well in humans as it does in mice, it is not likely to be a permanent solution. In most of the mentioned conditions, high doses need to be continued indefinitely or until the primary blockage in energy production has been removed.

In AD, niacinamide-dependent enzymes have been shown to be deficient. Getting more niacinamide into congested brain cells helps to rev up energy production and lets these cells function more normally.

Niacinamide works best when other vitamins of the B group are also supplied at lower doses, such as taking a B complex with most meals. In addition, vitamin B12 is especially useful. In AD studies, B12 has commonly been tested together with folic acid and vitamin B6. These B vitamins control levels of the amino acid homocysteine in the blood. Homocysteine is formed during the conversion of the amino acid methionine into the functional amino acid cysteine. When these vitamins are deficient, high levels of homocysteine accumulate which are associated with an increased risk of AD. Supplementing with these vitamins can halve the rate of brain shrinkage in elderly people with mild memory problems. Those with the slowest rate of shrinkage had better cognitive test scores.¹⁷

However, vitamin B12 is poorly absorbed, especially by the elderly. If one does not want to get regular injections of B12, one can chew a tablet and keep it under the tongue for as long as possible, or dissolve it in a small amount of warm water to make a paste and rub it into the nostrils for absorption. If done daily, only a small amount needs to be used. Better than folic acid from tablets is folate from green leaves or their juices.

Other Useful Measures

Other beneficial vitamins and minerals are high amounts of vitamin C, D (sunshine) and (natural) vitamin E, magnesium, zinc, iodine and selenium. Lecithin, ginkgo biloba and turmeric are beneficial for the brain and liver, while caffeine stimulates brain activity. A recent supplement to the *Journal of Alzheimer's Disease* showed that the consumption of moderate amounts of caffeine slowed the cognitive decline associated with ageing as well as the incidence of AD.¹⁸

Acetyl-L-carnitine or ALCAR (try 1–2 grams per day) increases energy production by delivering fatty acids into mitochondria and improves their health by helping to dispose of fatty wastes. It also increases production of the important neurotransmitter acetylcholine. Before Alzheimer's patients experience memory loss, the brain's neurons have already suffered harm for many years due to their mitochondria being congested with protein and fat residues.¹⁹

The omega-3 fatty acid DHA (docosahexaenoic acid) is the most abundant fatty acid in the brain. People with liver damage (as from paracetamol) have lost the ability to synthesise it from the more common alpha-linolenic acid. Therefore supplementing with DHA tends to be beneficial but it needs to be given together with protective vitamin E, as oxidised DHA may damage the brain.

Other studies show that a low dosage of a certain cannabinoid, a component in marijuana, reversed memory loss in older rats. These old rats performed better in memory tests and had less brain cell death. It has also been found that people who regularly smoked marijuana in the 1960s and 1970s rarely develop Alzheimer's disease.

Earlier research (2006) showed that THC, marijuana's active ingredient, can slow the formation of "Alzheimer plaques" in the brain better than any commercial drugs. THC also blocks clumps of protein that inhibit memory and cognition in AD patients.²⁰ These beneficial effects of cannabinoids may be significant as paracetamol has been shown to work by blocking cannabinoids in the brain.

To improve blood supply to the brain, it is beneficial frequently to lie for extended periods with the head

lower than the heart, such as on a slant board or by raising the foot end of the bed with bricks.

Supplementing with these vitamins can halve the rate of brain shrinkage in elderly people with mild memory problems.

The Real Cure

Medical research clearly shows that a major factor in the development of Alzheimer's disease is a large amount of abnormal proteins deposited in neurons and other brain areas. In addition, there are also oxidised lipid wastes and toxic metals. It is

clear that these more or less toxic waste accumulations will greatly limit nutrient supply, waste removal and energy production in the affected areas of the brain.

While mainstream medicine will continue to search for new and better drugs and technologies, for natural medicine this is a standard problem with a time-honoured solution.

Essentially, all chronic degenerative diseases present us with the same picture of accumulated metabolic and toxic waste products that obstruct normal cell and organ functions. The main difference between the multitude of diseases is the organ or part of the body that is most affected and the way in which body functions are impaired.

The process by which cells degrade and recycle material into amino acids that can be reused is called autophagy. It is an essential component of cellular survival and defence against invading organisms. Even mainstream researchers realise that waste removal is the potential cure and that calorie restriction encourages autophagy, but it is more profitable to look for a drug or technological solution to accomplish this.²¹

If the affected cells could break down the obstructing plaques, this would greatly increase the chances of recovery from AD.

A researcher in one study explained: "Although we do not yet completely understand how these diseases develop, we do know that the proteins clump together and form a plaque buildup in affected patients' neurons. If we can direct the cell's own ability to break down waste products against the plaques, we could keep them from forming and potentially intercept the development of these and other diseases."²²

Furthermore, most chronic and autoimmune diseases are associated with the presence of pleomorphic or cell-wall-deficient microbes in the affected tissues, and there is some indication that this is also the case with AD. For instance, by experimentally using a drug that is approved for immune deficiency and autoimmune disorders, researchers achieved much better results than with any drug approved and used for treating AD.²³ This shows the potential benefit of treating AD like an autoimmune disease. For a more detailed explanation, see my article "How to Overcome Chronic and Autoimmune Diseases".²⁴

While cleansing is difficult even for determined individuals who want to improve their health, it is even more so for Alzheimer's disease patients and their carers. Nevertheless, it is the only game in town, and some carers or even individuals with early symptoms may want to try it.

So here is a basic outline of an holistic program.

Step 1: Avoid or minimise the factors that have been mentioned as causing or contributing to the condition; e.g., any mercury amalgam fillings still present should be removed, preferably by an holistic dentist. Gradually reduce any drugs to the absolute minimum. Food should be as free of chemical additives or residues as possible.

Step 2: Gradually introduce vitamins, minerals and other remedies mentioned as being beneficial, especially remedies and methods that improve liver function and blood circulation to the brain. Try 500 milligrams of niacinamide with each meal; possibly double the dose. If niacinamide therapy is reasonably successful, that will make the whole program so much easier to follow.

Step 3: Monitor the acidity of the urine and try to keep it close to pH 7. If it is mostly too acid, then take more alkalisng agents including sodium bicarbonate (not close to meals) and potassium citrate. If the body seems to be too alkaline, with a pH above 7, and if the skin is insensitive to irritants such as insect stings, then take more ascorbic acid and hydrochloric acid supplements with meals.

Step 4: Gradually adopt a high-quality diet.²⁵

Step 5: Use oral chelation to remove mercury and aluminium. Sulphur compounds are needed to detoxify the liver. If these are not well tolerated, add a molybdenum supplement. One of the strongest chelators is alpha-lipoic acid (also called thioctic acid), best combined with milk thistle extract. Chlorella (broken-cell powder) prevents re-absorption of expelled metals from the intestines. Also helpful are MSM, N-acetylcysteine, alpha-tocopherol and ascorbic acid. You may also add other mercury chelators obtained from the Internet or use the Klinghardt Neurotoxin Elimination Protocol.²⁶

Step 6: To reduce or eliminate microbial problems, try a mild form of the Ultimate Cleanse²⁷ with special focus on using lactic acid-fermented foods, especially fermented vegetables such as genuine sauerkraut.

Step 7: A series of cleanses using fresh raw food is needed to remove the toxic and metabolic waste

products from the brain. This is the most difficult part and needs to be done gently with only gradually increasing intensity. When under-eating, the body starts to process, digest and eliminate its waste products—but only if it has enough vitality, which can best be supplied with fresh juices of wheat grass and barley grass as well as sprouted seeds, e.g., mung beans and lentils. In addition, protein-digesting enzymes, e.g., bromelain and papain, are helpful.²⁸

Therefore it is clear that any attempt at setting up community healing ventures needs to start from the grassroots level and proceed very carefully.

Outlook for the Future

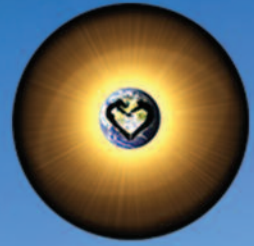

Ideally, governments would encourage and support the establishment of sanatoriums and health farms for the holistic therapy of patients with Alzheimer's disease and other chronic diseases. But sadly, government health agencies are firmly wedded to drug medicine and have a long track record of suppressing natural medicine. Examples of this are the persecution of holistic cancer therapists²⁹ and the malicious destruction of Pan Pharmaceuticals in Australia.³⁰

Therefore it is clear that any attempt at setting up community healing ventures needs to start from the grassroots level and proceed very carefully. A model for this exists in the movement started by Ann Wigmore in the 1960s that led to the establishment of the Hippocrates Health Institute. There, visitors could detoxify and heal on a raw food program based on fresh wheat grass juice and sprouted seeds. This movement included city centres as well as health farms. It would be great if this movement or something similar could be revived and made to spread worldwide. ∞

2012 and The Transformation of Mother Earth

George's heart felt 'Our Journey' message is now being voiced to a live audience. In his 2011 'Our Journey Home' Global Tour, George will help you to re-discover the truth of what life is really all about, beyond religious, scientific and new-age paradigms.

If you have listened to his videos and interviews, you will know that George has immense knowledge and wisdom gained over a lifetime of extra-ordinary experiences. This includes meeting and interacting on and off world, with various E.T. races, both benevolent and malevolent, and travelling with his consciousness up through the dimensions of our Universe in 2003 re-discovering what life here on this planet is all about. We are far more significant and magnificent in the greater scheme of things than we are being led to believe. For more info about the message of George Kavassilas travel to www.georgekavassilas.org.

Australian Tour Dates

Adelaide 5th March
Perth 12th March
Central Coast 16th March
Sydney 20th March
Sunshine Coast 22nd March
Gold Coast 26th March
Melbourne 2nd April

Be warned, George's message is not for the faint hearted as even the most spiritually aware are in for a big surprise.

For bookings and more information travel to www.enlightendevents.com.au or Phone (02) 8338 1570.

In his full day seminar George will help you re-discover:

- * The structure of the Universe.
- * Our Journey and why we are on planet Earth at this time.
- * Who we really are, where we come from and where we are headed.
- * 2012-2013, the transformation of Mother Earth and her Humanity.
- * The Grand Deception and E.T. influences in our earthly paradigm.
- * Lures and entrapments from collective hive minds.
- * Who the galactic federation of light is and what role they are playing.
- * The suppressed and forgotten Divine Feminine.
- * Mother Earth, Father Sun and their message to Humanity.

Do you want to experience these amazing health benefits?

MAPPING THE WORLD GRID WITH GRIDPOINT ATLAS

by Bruce L. Cathie and Rod Maupin
© 2010

The Gridpoint Atlas® 4.0 software is the result of a 21-year collaboration between Captain Bruce Cathie (Ret.) of Auckland, New Zealand, and Rod Maupin of Rainier, Washington, USA. The software illustrates all of the concepts that Bruce Cathie has described over the past 40 years in his many books, articles and videos on the World Grid system. Ed.

Calculation and Map Windows

To begin the discussion, there are two parts to the Gridpoint Atlas® software: a Calculation window and a Map window.

The Calculation window provides several utilities which allow you to calculate harmonics of the speed of light, gravity and the Earth's magnetic field for any latitude on the Earth's surface. All of the mathematical calculations and tables from Bruce Cathie's books are available for use in this side of the software.

The Map window allows you to plot maps of any area of the world, overlay the World Grid® onto them, and then view those overlays in Google Earth.

World Grid System

If you aren't familiar with the World Grid and its associated harmonics, here is a brief explanation. The World Grid system is a natural electromagnetic network that creates the harmonic geometric structure of the Earth from the universal unified field. Our reality is manifested from the dual fields of light and gravity, which are harmonic

reciprocals of each other.

That last statement is very important. Said another way, light and gravity have an inverse relationship to each other. As the harmonic of one increases, the harmonic of the other decreases. Knowing this one fact should allow you to understand the concept of how UFOs fly and how black holes operate.

In order to work with the harmonics of the World Grid system, you have to adhere to some rules.

The **Rules of Harmonics** are:

- 1) the system is based on 6 and 10;
- 2) zeros to the left or right of the decimal point, in any number sequence, are irrelevant and can be ignored.

The **Rules of Measurement** dictate that you must use the following units:

- 1) the nautical mile, which is equal to 6,000 geodetic feet or 72,000 geodetic inches;

- 2) the day, based on 27 grid hours or periods for one revolution of the Earth. There are 60 grid minutes in one grid hour and 60 grid seconds in one grid minute.

Bruce Cathie found that he had to apply both the Rules of Harmonics and the Rules of Measurement in order to uncover the harmonic relationships of the World Grid system. The idea is that you must first convert measurements to nautical miles and base the time component on a 27-hour day. After doing that, you can apply the Rules of Harmonics by checking for harmonics of 6 and 10, and ignoring zeros to the left or right of the decimal.

It is worth noting that these measurements are not used together by any country in the world. Nautical miles are used in aircraft, watercraft and spacecraft travel, but no one on Earth uses a 27-hour day. We use a 24-hour day.

It is our contention that, in the

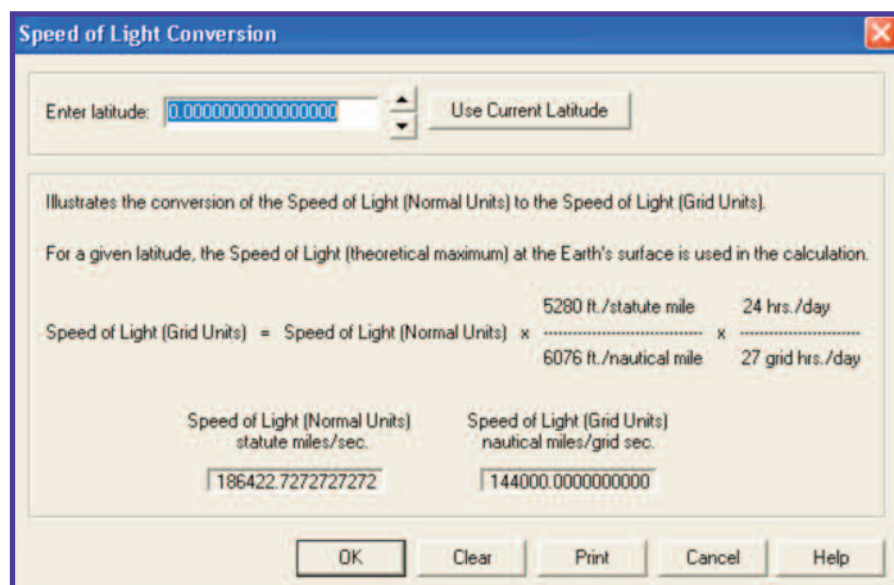

Figure 1: Speed of Light Conversion

NEWSCIENCE NEWSCIENCE NEWSCIENCE

past, other units of measurement were purposely chosen for use by learned men and governments with the intention of keeping the truth of this harmonic system from the public. It's much like how Latin terminology is used in medicine, thereby keeping it out of reach of the understanding of the average person.

With that brief introduction, we can now talk about the software. Gridpoint Atlas was developed as a tool that could be used for research into the World Grid system and its associated harmonics. This is the only software of its kind available to the general public. Let's have a closer look at its functionality.

The Calculation Window

In using the Calculation side of the software, you should start your understanding of the harmonics of the World Grid system by using the **Speed of Light Conversion** function. This utility shows the conversion of the speed of light from units in the physics textbooks to units of geometric harmonics.

Figure 1 shows a screenshot of the utility.

In this function, you can enter a latitude and show how the speed of light is converted from statute miles/normal second to nautical miles/grid second for that latitude. In this example, we see that at 0° latitude, the harmonic of the maximum speed of light on the Earth's surface is equal to 144,000. This is the fabled number in the Book of Revelation, chapters 7 and

14. So, does the number 144,000 refer to a number of people or does it refer to a frequency?

Another useful function is the **Relationship between Gravity and Light**. This function shows how gravity and light have an inverse relationship with each other. **Figure 2** is a screenshot with 0° entered for the latitude. Here we see the gravity and speed-of-light values for 0°

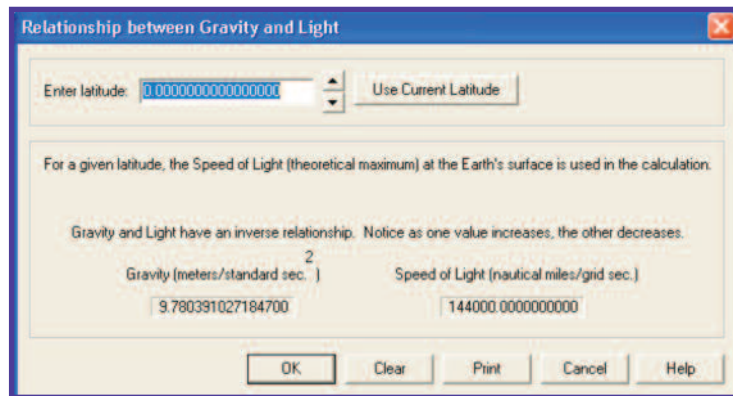

Figure 2: Relationship between Gravity and Light

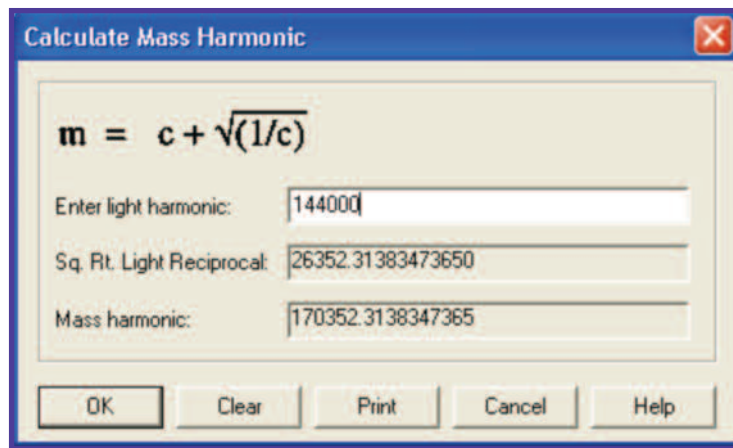

Figure 3: Calculate Mass Harmonic

latitude on the Earth's surface.

Let's dive a little deeper into harmonic theory. Early on, Bruce found that he could define mass, or matter, in terms of the speed of light. This is illustrated by the **Calculate Mass Harmonic** function. **Figure 3** is a screenshot. In this utility, you enter a speed-of-light harmonic and the corresponding mass harmonic will be displayed.

Bruce found that once he had an equation for mass, expressed in terms of light, he could substitute that into Einstein's famous equation and have the entire equation expressed in terms of the speed-of-light harmonic. This is illustrated by the **Equation 1: Energy** function. **Figure 4** is a screenshot of that one.

Another major utility is the **Magnetic Field to Gravity** function.

This table shows the relationship between gravity, the speed of light and the Earth's magnetic field. To use the function, you enter a latitude on the Earth's surface and the harmonics for that specific latitude will be displayed. After studying the table, you will see how gravity, the speed of light and the magnetic field are just mathematical conversions of each other. This is quite a startling fact that has never been published by anyone except Bruce Cathie. **Figure 5** is a screenshot of the Magnetic Field to Gravity function for 0° latitude.

I'll stress again one of the important points of this table: gravity and light are just mathematical conversions of each other. We just change the units of gravity and we end up with the reciprocal of light, or the "light reciprocal" as we often refer to it.

Notice that on the left side of the dialogue box there are two arrows by the field where you can enter a latitude. As you click the arrows up or down, the latitude value will increase or decrease by an increment

NEWSCIENCE NEWSCIENCE NEWSCIENCE

of 1° at a time. This is very useful, as you can see how all the harmonic values change between 0° and 90° latitudes.

Bruce learned years ago that these harmonic values vary with latitude. Therefore, if you could drive a car from the equator, which is 0° latitude, to the North Pole, which is 90° North latitude, your reality would continuously change as you travelled. You would not be the same person at the equator as you would be at the North Pole. However, because you would be manifesting at the same rate as your car and the environment around you, and because of relativity, you would not notice any difference. This is because you would be in sync with the process. The experience would be the same if you were driving from the equator to the South Pole. It would make no difference.

Theoretically, this would mean that any type of vehicle, aircraft or watercraft which travelled primarily north-south routes would experience more wear and tear (micro-fractures) than those which travelled primarily east-west routes.

The Map Window

For most people, the Map window of the Gridpoint Atlas software will be very exciting because you can pick any area of the world and plot the World Grid upon it. You can then view that plot in Google Earth. To understand why the software works the way that it does, let's look at its history.

Gridworks™ was the first version of the software and was released to the public in 1993 as an MS-DOS® program. From the beginning, we gave people the ability to calculate

grid points over any area of the world and then print them out. However, it was up to the individual to take the coordinates and plot them onto a map of their choosing. This was a great beginning because no one else provided the capability. But as time passed, we knew that we needed to provide a mapping functionality for people to use.

Using a royalty-free database was important to us, because we wanted to keep the cost reasonable for our customers.

In 2006, a new version of the software, called Gridpoint Atlas®, was released which had enhanced mapping functionality. But, it still used the first map database that we had released back in 2003.

Now we come to the present year, 2010. We knew that the map database included with the software was dated, but it had worldwide coverage and was royalty free. Street-level map databases were available, but the technology was expensive to distribute because most map vendors wanted a royalty per copy. This would have put the software out of reach of most people. That was not what we wanted. But, there was something else available that was free and which people could use at no cost: Google™ Earth.

Google had spent hundreds of millions of dollars developing Google Earth since its initial release in 2005. For the first time, here was a piece of software that not only had worldwide coverage using satellite imagery, but also was continually updated. That in itself was huge, but Google Earth also loaded different-resolution satellite imagery as a person zoomed in closer to an area. This was a breakthrough product, and Google allowed the public to use the software free of charge.

Bruce and I knew that there was no way we could compete with Google's deep pockets. In addition, Google's Terms of Use forbade anyone from using its imagery in a commercial software product. Google didn't mind your using its satellite imagery

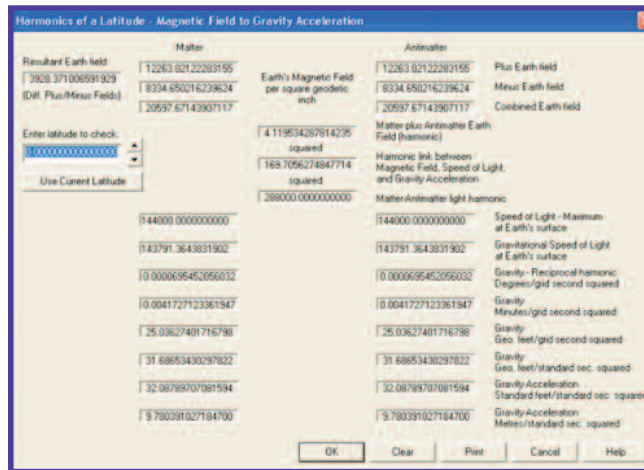

Figure 4: Equation 1: Energy

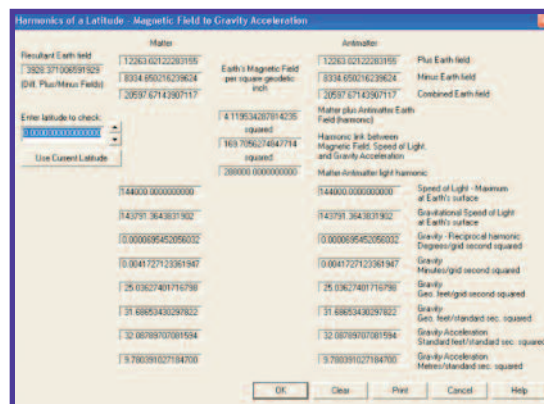

Figure 5: Harmonic Field to Latitude: Magnetic Field to Gravity Acceleration

In 2001, we released the first Microsoft® Windows® version of the Gridworks software. It still did not provide a mapping capability.

In 2003, we released Gridpoint™, the first version of the software that included a royalty-free worldwide map database. This was not a street-level database, but it was useful for printing out maps and driving to coordinates on the maps.

NEWSCIENCE NEWSCIENCE NEWSCIENCE

in the form of Google Earth screenshots, as long as you gave it proper credit and didn't charge people for viewing them.

The Google Earth team provided something else which made a world of difference to researchers like us: they published their file specification and encouraged people to use it to create Google Earth-compatible files. That's what we decided to do, and that's why Gridpoint Atlas does not display Google Earth imagery and why it is a separate product.

When you plot the World Grid® in Gridpoint Atlas, a Google Earth-compatible file is also created, and in turn the file is displayed in Google Earth. From a user's perspective, it is like you are moving from one piece of software to another—except for the fact that when you plot the grid in Gridpoint Atlas, the file is loaded into Google Earth automatically. An example will illustrate this.

There are many interesting sites around the world that deserve our attention. Let's start with the Argonne National Laboratory in Argonne, Illinois, USA. We'll begin our investigation of this location in Gridpoint Atlas by understanding the philosophy of the Map window in the software.

The software does not have precalculated World Grid maps of the entire world. That is not really practical, as there would be trillions and trillions of points in those maps and when you loaded such a map into memory it would bog down any computer system.

Another disadvantage of precalculated maps is that they may not be at a resolution that you want to use.

Initially, Bruce learned that the World Grid system was laid out on a system of grid lines 30 minutes (30')

mile spacing is used to show the major lines of the system, even though, theoretically, the World Grid is infinite. It has to be infinite in order to create the reality of the planet on which we live.

We found over time that researchers who purchased our software wanted different resolutions from the 30' and 7.5' divisions which we provided. We then included a facility where a person could enter their own grid resolution, as long as it was an harmonic of 360 degrees.

For our examination of the Argonne National Laboratory, we will use a grid resolution of 7.5 minutes of arc. To begin our study of this locale, we will load Google Earth and zoom in on the Argonne National Laboratory. **Figure 6** is a screenshot from Google Earth of the area.

We want to pick a centre point in the area and take that coordinate back to Gridpoint Atlas. We will choose 41.703877° N latitude and 87.984228° W longitude.

In Gridpoint Atlas, we will load the States layer of the United States map library. Although you can load other map layers, such as cities, towns, rivers and major roads, we only need to use one layer as a base layer for reference.

After loading the States layer, we will place a marker at the coordinate we chose in Google Earth. This marker will be used to tell Google Earth what the centre of our area is.

Finally, we will plot the World Grid by overlaying a 7.5' grid onto the area, and we will indicate that we

Figure 6: Argonne National Laboratory (screenshot source: Google Earth)

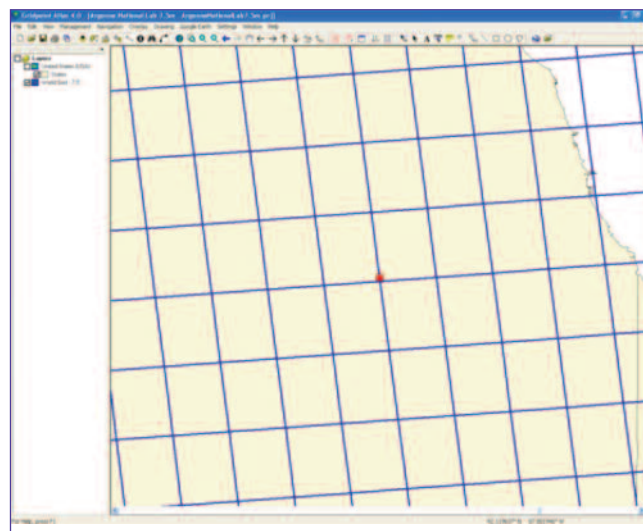

Figure 7: Map of the Argonne National Laboratory area with 7.5' grid overlay

or 30 nautical miles apart. He also learned that the grid could be further subdivided into a system of lines 7.5 minutes (7.5') or 7.5 nautical miles apart. To this day, the 7.5-nautical-

NEWSCIENCENEWSCIENCENEWSCIENCE

want to use the last marker placed as the centre of the area. What we have done so far is depicted in **figure 7**. It doesn't look that spectacular. However, you could add other map layers for more detail if you so desired. To reiterate, this is a map of the Argonne National Laboratory area, with a marker placed in the centre of the area and a 7.5' grid overlaid.

Now that the World Grid has been plotted over the area, we will go to the toolbar and click the View button in Google Earth, and the overlay is loaded into Google Earth. **Figure 8** shows the finished result. From this plot, we can see that a 7.5' grid line goes right through the storage ring of the Advanced Photon Source. It makes you think that the placement of the facility at that location was not an accident.

Major Grid Lines and Key Sites

Another example is the Tikal National Park located in the Petén Basin of northern Guatemala. **Figure 9** is a plot of that area. In this case, a 7.5' grid line runs through one of the temples.

Further use of Gridpoint Atlas and Google Earth will show that major grid lines also run through the following sites:

- Library of Alexandria, Alexandria, Egypt
- Luxor Temple, Luxor, Egypt
- Great Pyramid, Giza complex, Cairo, Egypt
- European Synchrotron Radiation Facility, Grenoble, France

- Angkor Wat complex, Cambodia
- Temple Square, Salt Lake City, Utah, USA
- CERN particle physics laboratory, Geneva, Switzerland

coincidental to the multitude of sceptics out there. However, for those of us who have studied the World Grid system for decades, we feel much differently. Our study of the system has provided us with only one possible conclusion: ***the ancients had knowledge of the World Grid system and used it in the design and placement of their structures. They applied this knowledge and used it to enrich their lives.***

Utilising the World Grid System

Unfortunately, today, the governments of the world have not seen fit to tell their people about the World Grid system. Even though they use it in their own research, they jealously guard it from the public at every possible turn. They know that if the full truth of the system were to reach the light of day, man would realise that current power-generation systems were obsolete and a bad joke at best. Control of conventional power-generation systems has been a convenient way to control people for decades. But, we think that those who are in power know that their days of control are coming to an end. Yet, they remain defiant to the end.

The World Grid system can provide us with a much different future—one where unlimited power is available at no cost or at very little cost to everyone, where interstellar space travel is possible, and where mankind advances instead of staying stuck in yesterday.

Figure 8: Argonne National Laboratory with 7.5' grid overlay (screenshot source: Google Earth)

Figure 9: Tikal National Park, Petén Basin, Guatemala, with 7.5' grid overlay (screenshot source: Google Earth)

There are hundreds of other sites around the world that have relationships to the World Grid system. All will be considered accidents and completely

THE 21ST-CENTURY RENAISSANCE OF SCIENCE

The 20th-century scientific world-view, based on the flawed second law of thermodynamics, is being surpassed by an ethical holographic life-science that holds promise for humanity's survival into the future.

by Professor Robert Pope
© 2010

Science–Art Research Centre
of Australia Inc.
Uki, NSW, Australia

Email: scienceartcentre@gmail.com
Website:
<http://www.science-art.com.au>

Registered Rebirth Document

This essay is the birth certificate of the 21st-century Renaissance. It shows how the life science of the Classical Greek era's humanities has been upgraded in order to bring balance into western technological culture. Many philosophers have warned that the fate of human civilisation depends upon achieving that goal.

The ancient Greek Parthenon represented a Greek life-science culture, symbolising concepts of political government long lost to modern western science. The Ottoman military once stored gunpowder in the Parthenon, and in 1687 a Venetian mortar round blew the building into ruins. Recent restoration techniques using computers revealed that strange illusionary optical engineering principles had been used in the building's construction. We know that they were associated with the mathematics of the Music of the Spheres that Pythagoras had brought back from the Egyptian Mystery Schools. We also know that Plato considered that any engineer who did not understand spiritual optical engineering principles was a barbarian.

Harvard University's Novartis Professor, Amy Edmondson, in her biography of Buckminster Fuller, *A Fuller Explanation* (1987, 2007), wrote about how Fuller had plagiarised Plato's spiritual engineering discoveries and used them to derive his life-science synergistic theories. These theories, which completely challenged the basis of the 20th-century Einsteinian world-view, are now the basis of a new medical science instigated by the three 1996 Nobel Laureates in Chemistry. This complex fullerene geometrical reasoning has brought about the rebirth of the lost ancient Greek optical science of life. This is now rewriting western technological culture, so there is a need to know why Buckminster Fuller wrote that this reunification provides a choice between Utopia or Oblivion.

After presenting complex geometrical reasoning, Professor Edmondson wrote (p. 43): "By now familiar with Fuller's underlying assumptions, we shall take time out to introduce some background material. The origins of humanity's fascination with geometry can be traced back 4,000 years, to the Babylonian and Egyptian civilizations; two millennia later, geometry flourished in ancient Greece, and its development continues today. Yet most of us know almost nothing about the accumulated findings of this long search. Familiarity with some of these geometric shapes and transformations will ease the rest of the journey into the intricacies of synergetics."

Human survival now depends upon a more general understanding that ethics is not about how science is used but about the form of the spiritual or holographic structure of science itself. There is no need for the reader to become conversant with the complex geometrical equations suggested by Professor Amy Edmondson in order to follow the journey of ethical logic from ancient Egypt to the 21st-century Renaissance. However, before undertaking that journey, we need to realise the nightmare scenario that the unbalanced

20th-century understanding of science has forced global humanity to endure and about which Buckminster Fuller warned.

In 1903, Lord Bertrand Russell's book *A Free Man's Worship* was published, containing his vision of "a Universe in Thermodynamic Ruin". This nightmare mathematical assessment of reality stated that all the most ennobling thoughts of humankind amounted to nothing at all and that all life in the Universe must be destroyed. Lord Russell wrote that humans must endure, with total despair, the hopelessness of living within a reality that is totally governed by a lifeless energy law that Einstein was to call "the premier law of all of science". This law governing 20th-century technological culture is the *second law of thermodynamics*. It is also known as the *universal heat-death law* or the *law of universal chaos*. This law demands the total extinction of all life in the Universe when all heat is dissipated into cold space. As a result of this law, all life sciences, including global economic rationalism, can only be about species moving towards this heat-death extinction.

Buckminster Fuller's life-science energy does not obey the heat-death law. It is based instead upon fractal logic, which exists forever. Einstein's governing death-science law is the correct basis of modern chemistry, but this chemistry is balanced by Plato's spiritual engineering principles or the functioning of fullerene holographic "chemistry". While mainstream science does indeed accept that fractal logic extends to infinity, no life science within the western technological culture can possibly be part of its workings. That mindset can be a serious distraction to biologists who seek to associate rain-cloud fractal logic with the effects of climate change upon human evolution.

In 1996, within an Open Letter to the Secretariat of the United Nations on behalf of the Science–Art Research Centre of Australia (Australian National Library, Canberra, Australian Citation Record 2645463), a complaint was made that the Australian government was unintentionally committing a major crime against humanity by endorsing a totally entropic educational system governed by the second law of thermodynamics. At the United Nations University in Washington state, USA, the complaint was handed to the UN University Millennium Project, Australasian Node, for investigation. Seven years of peer-reviewed research ensued, with the conclusion that the complaint was justified. In 2006, a formal Decree of Recognition was issued by the Project's Australasian division, attesting to the urgent global importance of this issue.

Lessons from Ancient Egypt and Classical Greece

Having contrasted the 21st-century rebirth of Classical Greek fractal logic life-science—the New Renaissance—with the 20th-century nightmare, we can follow Professor Amy Edmondson's advice to begin our journey of ethical understanding with ancient Egypt. (George Sarton's *Introduction to the History of Science* [1927–1948] argues that ancient Kemetic theories of Egypt were scientific and established the foundations of later Hellenistic science.)

The ability of the ancient Egyptian Old Kingdom to reason that two geometries existed to balance the workings of the Universe was praised by the Greek philosopher Plato, whose fundamental idea was that "All is Geometry". Old Kingdom wall paintings depicted that evil thoughts prevented evolutionary access to a spiritual reality. The geometry used to survey farm boundaries lost each year when the River Nile flooded was quite

different from the sacred geometry basic to Egyptian religious ceremonies.

The BBC television program about the collapse of the Egyptian Old Kingdom, presented by Professor Fekri Hassan of the Institute of Archaeology, University College, London, explained that some 4,000 years ago a prolonged drought caused the collapse of the First Kingdom soon after the death of King Pepi II. Professor

Hassan explained that 100 years after the collapse, hieroglyphs recorded that the Egyptian government was restored when the people insisted that the ethics of social justice, mercy and compassion be fused into the fabric of political law. It is rather important to realise that, at that time in history, ethics associated with fractal geometrical logic had been fused into a political structure.

During the sixth century BCE, the Greek scholar Thales went to Egypt to study the ethics of life science at the Egyptian Mystery Schools and he advised Pythagoras to do the same. Pythagoras learned that evolutionary wisdom was generated by the movement of celestial bodies, which the ancient Greeks called the Music of the Spheres. It was thought that this harmonic music could transfer its wisdom to the atomic movement of the soul through the forces of harmonic resonance, such as when a high note shatters a wine glass.

The Platonic tradition of Greek philosophy was to fuse ethics into a model of reality called the *nous*, postulated by the scientific thinker Anaxagoras. The *nous* was a whirling force that acted upon primordial particles in space to form the worlds and to evolve intelligence. The ancient Greeks invented science by fusing ethics into the fractal logic structure of the *nous*. The harmonic movement of the Moon was thought to influence the

It is rather important to realise that, at that time in history, ethics associated with fractal geometrical logic had been fused into a political structure.

female fertility cycle, and this science could explain a mother's love and compassion for her children. This science, involving both celestial and atomic movement, became associated with the Science of Universal Love taught in Greece during the third century BCE. Julius Caesar's colleague, the historian Cicero, recorded during the first century BCE that this science was being taught throughout Italy and across to Turkey by teachers called "saviours". He considered that such teaching challenged Roman political stability.

The Classical Greek science was about how humans might establish an ethical life-science to guide the ennobling of political government. The idea was that by existing for the health of the Universe, human civilisation would avoid extinction.

The Classical Greek life science was constructed upon the concepts of good and evil. Good was for the health of the Universe. Evil, as defined in Plato's *Timaues*, was a destructive property of unformed matter within the physical atom. The ancient Greek atom was considered to be physically indivisible, and it can be considered that the anti-life properties of nuclear radiation are evil. Modern chemistry is constructed upon the logic of universal atomic decay, which is governed by the second law of thermodynamics. The Egyptian concept of evil thought-processes leading to oblivion echoes Plato's and Buckminster Fuller's concepts of an oblivion brought about through an obsession with an unbalanced geometrical world-view.

The argument that St Augustine's banishment of fractal life-science logic in the fifth century was responsible for western life-science becoming obsessed with the second law of thermodynamics can be validated.

Attack on Fractal Life-Science

Max Planck Institute astrophysicist Professor Peter Kafka, in his "Six Essays on the Principle of Creation and the Global Acceleration Crisis" (1976–1994), predicted the current global financial collapse being brought about by "scientists, technologists and politicians" who have an unbalanced understanding of the second law of thermodynamics. Kafka wrote in the fourth essay, "Ethics from Science?" (1990), that the second law of thermodynamics had been known for centuries. Kafka realised that it had various other names throughout history, such as *Diabolos*, the Destroyer of Worlds and the evil god of Plato's Physics of Chaos, now the god of modern Chaos Physics.

In the fifth century, some 1,000 years of fractal-logic scrolls held in the Great Library of Alexandria were burned. The custodian of the library, the mathematician

Hypatia, was brutally murdered by a Christian mob during the rule of Pope Cyril I of Alexandria. Hypatia's fractal logic life-science was condemned by St Augustine as the work of the Devil. Edward Gibbon, in his *History of the Decline and Fall of the Roman Empire*, marked Hypatia's murder as the beginning of the Dark Ages.

Encyclopaedia Britannica lists St Augustine as the mind that mostly completely fused the Platonic tradition of Greek philosophy with the religion of the New Testament, influencing both Catholic and Protestant religious beliefs in modern times. His translation of Plato's atomic evil as female sexuality influenced the 13th-century Angel Physics of St Thomas Aquinas, known as history's Doctor of Science or Angelic Doctor. During the mid-14th century until the mid-17th century, Angel Physics was used to legalise the imprisonment, ritualistic torture and burning alive of countless women and children. The argument that St Augustine's banishment of fractal life-science logic in the fifth century was responsible for western life-science becoming obsessed with the second law of thermodynamics can be validated.

The Reverend Thomas Malthus derived his famous "Essay on the Principle of Population" from the writings of St Thomas Aquinas and used it to establish the economic and political policies of the East India Company. Charles Darwin, employed by that company, cited Malthus's essay as the basis of his survival-of-the-fittest life-science. Darwin, in the 18th century, held the essay as synonymous with the second law of thermodynamics.

Rediscovery of the Golden Age

In 529, Plato's Academy was closed by the Christian Roman Emperor Justinian I for being a pagan institution. Banished Greek scholars fled to Islamic Spain, where their theories were tolerated. The Golden Age of Islamic science, from which western science emerged, included the Translation School in Toledo. Islamic, Christian and Jewish scholars worked together to translate the lost Greek ideas into Latin.

The Franciscan monk Roger Bacon, during the 13th century, studied work from Jewish scholars familiar with the research undertaken at the Toledo School. Pope Clement IV encouraged Bacon to write his pagan ideas in secret; but after Clement's death, Bacon was imprisoned by the Franciscans.

Roger Bacon developed ideas about flying machines,

horseless carriages, submarines and self-propelling ships from the same Islamic source that later inspired Leonardo da Vinci. He studied the optics of Plato and the upgrading of Plato's optics by Islamic scholars. Unlike da Vinci, Roger Bacon agreed with Al-Haytham, history's Father of Optics, that the eye could *not* be the source of all knowledge—an erroneous idea of reality that René Descartes and Sir Francis Bacon, the Renaissance author and Father of Inductive Reasoning, used to usher in the age of industrial entropic materialism. In America, Thomas Jefferson, inspired by Sir Francis Bacon's vision of a great Empire of Liberty based upon all knowledge originating from the eye, depicted the concept on the Great Seal of the United States.

Cosimo de' Medici, with the help of Sultan Mehmed II, re-established Plato's Academy in Florence during the 15th century. Medici appointed Marsilio Ficino as its manager. Ficino wrote about the Platonic love associated with the Music of the Spheres influencing the atoms of the soul. He carefully avoided serious charges of heresy by placing eminent Christian figures into his writings and paintings associated with the new Platonic Academy. Two famous paintings commissioned by the Medici that survived the Great Burning, instigated by the Christian monk Savarola, illustrated Ficino's cunning.

In 1480, Botticelli was commissioned to paint the portrait *St Augustine in His Study*, in which a book is depicted opened at a page displaying Pythagorean mathematics. Alongside the written formulae is an instrument for observing celestial movement.

St Augustine is shown gazing directly at an armillary sphere, used to calculate data relevant to Pythagoras' Music of the Spheres. The saint's halo, accepted at that time as representing the consciousness of the soul, upon close examination has a spherical bookstud within its orbit, depicting Ficino's atom of the soul responding to the Music of the Spheres.

At the same time that Botticelli was commissioned to paint St Augustine's portrait, Ghirlandaio was commissioned to paint a portrait of Augustine's close colleague, St Jerome. Again, with careful examination, Jerome's halo in *St Jerome in His Study* can be seen to have a spherical bookstud placed into its orbit, demonstrating that Botticelli's depiction of the atom of the soul associated with the Music of the Spheres was not coincidental.

Both Botticelli and Ghirlandaio were mentors to Leonardo da Vinci.

By realising that Roger Bacon's knowledge of Platonic optics was generally superior to Leonardo's, the Science–Art Research Centre, in collaboration with a cancer research team at the University of Sydney in 1986, succeeded in modifying the optical key to Leonardo da Vinci's Theory of Knowledge. This discovery also corrected the optics understanding of René Descartes, Sir Francis Bacon, Lord Russell, Immanuel Kant, Albert Einstein and other scientists who considered Al-Haytham's optics as being industrially impractical. The Science–Art Research Centre's correction to the crucial

optics key was published in a Science–Art book launched in Los Angeles in 1989 under the auspices of The Thaliens Mental Health Center in Hollywood, California.

In 1991, the Nobel Prize in Physics was awarded to Pierre-Gilles de Gennes for his theories about liquid crystal optics. In the following year, the vast new science and technology predicted by the Science–Art Centre's correction of da Vinci's work was discovered. The principal discoverer, Professor Barry Ninham of the

Australian National University, later appointed to Italy's National Chair of Chemistry in Florence, wrote that the Centre's work encompassed a revolution of thought as important to science and society as the Copernican and Newtonian revolutions.

Conflicting Life-Science Ideas

Leonardo da Vinci was certainly a great genius, but he was not really the Man of the Renaissance at all because he was unable to

comprehend the life-energy basis of Plato's spiritual optical engineering principles. He had attempted to develop the relevant optics for several years, then reverted to what Plato had referred to as the engineering practices of a barbarian.

On the other hand, Sir Isaac Newton was a genuine Renaissance Man—as his unpublished papers, discovered last century, reveal. His certain conviction that "a more profound natural philosophy exists to balance the mechanical description of the Universe" is based upon the same physics principles that upheld the lost Classical Greek era's science of life—and they are now at the cutting edge of fractal logic quantum biology.

The early years of the 20th century were marked by the aforesaid Bertrand Russell's horrific acquiescence in 1903 to enslavement by the second law of thermodynamics,

followed in 1905 by Einstein's unbalanced $E = mc^2$ equation. *Time* magazine's "A Century of Science" lists Maria Montessori as the greatest scientist of 1907. Montessori, in her association with Woodrow Wilson, Alexander Graham Bell and Thomas Edison (all of whom provided funding for her research), demonstrated how an unbalanced electromagnetic understanding of the second law, which she called the "energy greed law", embraces Plato's definition of evil. On the other hand, Montessori's and Teilhard de Chardin's electromagnetic life-science key to open the Golden Gates to the future was derived from concepts based upon the spiritualisation of matter and humanity's evolving with the Cosmos. That was in direct contrast to Bell's electromagnetic understanding.

President Wilson was genuinely troubled by the loss of life during World War I. He and Bell chose Darwin's entropic life-science, rather than Montessori's life science, as the electromagnetic key to the future of America. After World War II, Nazi High Command prisoners at the Nuremberg war crimes tribunal protested that Adolf Hitler had based the policies of the Third Reich upon the Darwinian eugenics with which Wilson and Bell had been involved.

Scientist Matti Pitkanen can be considered to have upgraded Teilhard de Chardin's ethical electromagnetic key to open Montessori's Golden Gates to the future. Teilhard de Chardin insisted that the Gates would only open for all people at the same time, and not for any chosen race or privileged few. Pitkanen noted that the Earth's regular deflection of potentially lethal radiation from the Sun fulfills the criterion of an act of consciousness protecting all life on Earth at the same time.

Albert Szent-Györgyi, the winner of the Nobel Prize in Medicine or Physiology for 1937, wrote a book about scientists who do not recognise that their understanding of the second law of thermodynamics is balanced by the evolution of consciousness. The title of the book is *The Crazy Ape* (1970).

In his 1959 Rede Lecture at the University of Cambridge, the molecular biologist C. P. Snow argued that the inadequate understanding by his fellow scientists about the nature and functioning of the second law of thermodynamics was scientifically irresponsible. He referred to their thinking as belonging to their Neolithic cave-dwelling ancestors. Snow's lecture was published as *The Two Cultures and the Scientific Revolution*. It was listed by the *Times Literary Supplement* as one of 100 books most influencing western public thinking since World War II, and it has been systematically denounced ever since.

During the past 15 years, science has developed so rapidly that it has given the humanities no time to grasp the significance of the social ramifications of the rebirth of Fuller's Platonic spiritual, or holographic, engineering principles from ancient Greece.

Organised religious opposition to criticism of the understanding of the second law of thermodynamics from Christian schools, colleges and universities has been extremely thorough throughout the world. Take, for example, Professor F. M. Cornford, who was educated at St Paul's School and Trinity College, Cambridge, was made a Fellow in 1899, became the Laurence Professor of Ancient Philosophy in 1931, and was elected a Fellow of the British Academy in 1937. His grasp of the ancient Greek fractal science of life can be shown to be completely illogical, yet it is the foundation for well-organised international academic study courses at the present time. Since 1932, Cambridge University has published 11 editions of Cornford's book *Before and After*

Socrates. Cornford states in this book that Plato can be considered one of the greatest fathers of the Christian religion. Such pious academic reasoning flies in the face of Plato's spiritual engineering principles being observed operating within the DNA as a function of a fractal life-science evolutionary process and is therefore ludicrous. Plato defined that reasoning as being ignorant and barbaric and the

Plato defined that reasoning as being ignorant and barbaric and the language of engineers, not fit to be considered that of philosophers.

language of engineers, not fit to be considered that of philosophers.

The Harvard-Smithsonian/NASA High Energy Astrophysics library has published papers by Professor Petar Grujic, scientific adviser to the Institute of Physics in Belgrade, arguing that the Classical Greek life science was based upon fractal logic, a totally incomprehensible concept within the much-lauded ancient Greek study courses currently set for postgraduate studies.

Seashell Patterning and Fractal Logic

Having arrived at the destination of Professor Amy Edmondson's journey from ancient Egypt to modern times, in order to be educated about the importance of Buckminster Fuller's geometrical understanding, we are able to grasp the stark reality of the title of Fuller's book *Utopia or Oblivion*. The objective of this essay, to construct the foundations of the Social Cradle to nurture the Florentine New Measurement of Humanity Renaissance, was derived from that book. The following explains the Science-Art Research Centre's long and arduous struggle to help contribute towards the vital human survival research now being carried out under the auspices of the New Florentine Renaissance.

In 1979, the Science Unit of Australia's ABC television documented the work of the Science–Art Research Centre within its eight-part series *The Scientists: Profiles of Discovery*. During that year, at the International Centre for Theoretical Physics in Trieste, Italy, China's most highly awarded physicist, Kun Huang, proposed a research plan that was put into operation by the Centre. Professor Huang was angry that Einstein and the framers of the 20th-century world-view were unable to discuss the Classical Greek life sciences in infinite biological energy terms. He proposed that by observing the evolutionary patterning changes to species designed upon ancient Greek Golden Mean geometry, it should be possible to deduce the nature of the life-force governing their evolution through space-time. He suggested that the world's seashell fossil record would provide the necessary patterning-change information. The research was assisted by the communities of the six towns comprising the Riverland region of South Australia.

During the 1980s, the Centre's several seashell life-energy papers, written by the Centre's mathematician Chris Illert, were published by Italy's leading scientific journal, *Il Nuovo Cimento*. In 1990, two of the papers were selected as representing important discoveries of the 20th century and were reprinted by the world's leading technological research institute, the Institute of Electrical and Electronics Engineers in Washington, DC.

By deriving an art–master optics formula from the Italian Renaissance which can be considered to be associated with fractal logic, a simulation of a living seashell creature was generated. By lowering the musical harmonics, a simulation of the creature's fossil ancestor was obtained. By lowering the musical order by a different amount, the simulation of a strange, grotesque creature was generated. The Smithsonian Institution identified the fossil as being the famous *Nipponites mirabilis* that drifted along the coast of Japan 20 million years ago. It was designed to drift along upright in water in order to ensnare its prey. Chris Illert became the first scientist to link its evolution to a living seashell.

In 1995, the discovery won an internationally peer-reviewed biology prize from the Institute for Basic Research in the USA. Kun Huang was greatly honoured. The work was acclaimed for the discovery of new physics laws governing optimum biological growth and development through space-time. The Research Institute's president, Professor Ruggero Santilli, in collaboration with the Centre's mathematician, made a most important observation: that the accepted scientific world-view could not be used to generate such futuristic

simulations; instead, it generated cancer-like biological distortions through space-time.

The Centre's bio-aesthetics researcher, the late Dr George Robert Cockburn, London Fellow of the Royal College of Medicine who had worked with the Centre's mathematician, became concerned by the scientific community's refusal to challenge its obsolete understanding of the second law of thermodynamics. He published several books about creative consciousness based upon the ancient Greek fractal logic life-science. His correction to Immanuel Kant's aesthetics was later found to be validated by the 19th-century mathematician Bernard Bolzano and his Theory of Science. Bolzano's own correction to Kant's aesthetics had been assessed by Edmund Husserl in his *Logical Investigations*, vol. 1, *Prolegomena to Pure Logic* (sn 61, Appendix) (1900) as being the work of one of the greatest logicians of all time.

The work was acclaimed for the discovery of new physics laws governing optimum biological growth and development through space-time.

We know that Bolzano corrected the aesthetic logic of Immanuel Kant by using aspects of fractal logic, as the famous Bolzano–Weierstrass theorem of 1817 is now synonymous with the pioneering of modern fractal logic. The aesthetics associated with Kant, belonging to the destructive entropic world-view, is hailed as being of global importance during the 21st century when in fact it is known to be obsolete. J. Alberto Coffa's

book *The Semantic Tradition from Kant to Carnap: To the Vienna Station* (1991) contains the statement (p. 23): "Kant had not even seen these problems; Bolzano solved them. And his solutions were made possible by, and were the source of, a new approach to the content and character of *a priori* knowledge." The famous Bolzano–Weierstrass theorem was based upon fractal logic concepts.

In the book *The Beauty of Fractals: Images of Complex Dynamical Systems* (eds H.-O. Peitgen and P. H. Richter, Springer-Verlag, 1986) is a chapter entitled "Freedom, Science, and Aesthetics" by Professor Gert Eilenberger, who also corrected an aspect of Kantian Aesthetics in order to upgrade quantum mechanics into quantum biology. Professor Eilenberger wrote about the excitement surrounding pictures of fractal computer art as demonstrating that "out of research an inner connection, a bridge, can be made between rational scientific insight and emotional aesthetic appeal; these two modes of cognition of the human species are now beginning to concur in their estimation of what constitutes nature".

The Science–Art Centre had discovered that by using special 3D optical glasses, holographic images emerged

Beyond Belief

by James F. Coyle

THE ULTIMATE MIND-POWER MANUAL

If you were told that you could use your mind to influence a slot machine or dice fall ...would you find this beyond belief?

- Influence others in a win-win situation
- Influence Slot Machines or Dice fall
- Produce specific dreams to solve problems
- Use same dream technique to solve medical problems
- Determine luck cycle in advance for financial windfalls
- Enhance your intuition for spectacular lifestyle enhancement
- Learn techniques for automatically attracting good luck
- Use Remote Viewing to ascertain advantageous future situations
- Learn mental pendulum to ascertain winning situations secretly
- Plus many other secret techniques to give you the lifestyle you want

If you were told that you could use your mind in a telepathic manner to influence the thinking pattern of another individual or group of people ...would you believe it?

Would you find it somewhat amazing if you learnt that while in the alpha/theta state you can communicate quite easily with dolphins?

And if you were further told that you could instruct your subconscious mind to produce a specific dream to help you solve a problem ... and use an unusual intuitional mechanism to decode this dream ... would you find this a helpful ability?

And if you discovered that you can use this same dream control to solve your personal medical problems would this make life easier?

But what if you were told that you could determine your luck cycle in advance so that you could use it for dollar windfall situations ...would this give you a sense of personal satisfaction?

But even better still, what if you were informed that you could use an easy-to-learn mental trigger that will tell you which slot machine to play, which scratch-it ticket to buy, which colour to bet on at roulette and which likely numbers to enter in the lotto....with a possible 70-80% chance of being correct? Then would you find all this "beyond belief?"

Well, you may be somewhat stunned to learn that all of this is now possible.....plus more!!

A handful of individuals in Australia and New Zealand are using combinations of the above mind-power techniques to improve their personal lifestyle dramatically. Without a shadow of doubt this material will drastically improve the lives of a significant percentage of readers!

UFO DISCLOSURE

DISCLOSURE

by
Steven M. Greer MD

For the first time ever, over five dozen top-secret military, government, intelligence and corporate witnesses to secret projects tell their true stories which disclose the greatest covert program in world history. This explosive testimony by actual government insiders proves that UFOs are real, that some are of extraterrestrial origin and that super-secret programs have energy and propulsion technologies that will enable humanity to begin a new era.

THE CHRONICLE OF AKAKOR

by Karl Brugger © 1976

In 1972, Karl Brugger, a German journalist and radio and TV correspondent, met Tatanca Nara, the white-skinned son of an Indian chieftain and, at the time, the chief of the Ugha Mongulala, Dacca and Haisha Indians. Brugger, a sceptic and a conscientious researcher, listened to the truly incredible story that the *mestizo* told him. After having checked it thoroughly, he decided to publish the chronicle that he had recorded on tape.

Following is an edited extract from Karl Brugger's book *The Chronicle of Akakor*, with a focus on The Book of the Jaguar. – Ed.

INTRODUCTION

The real Rio Amazonas starts at the confluence of the Rio Solimões and the Rio Negro. It takes 20 minutes by boat to reach Manaus, which is without any road connection to the shore. This is where I met Tatanca Nara. The date was 3 March 1972.

Tatanca Nara told of the tribe of the Ugha Mongulala, a people who were "chosen by the Gods" 15,000 years

ago. He described two great catastrophes that had devastated the Earth and spoke of the ruler Lhasa, a son of the Gods, who governed the South American continent, and of his relation to the Egyptians, the origin of the Incas, the arrival of the Goths, and an alliance of the Indians with 2,000 German soldiers. He spoke of giant stone cities and subterranean settlements of the divine ancestors. And he said that all these events had been written down in a document called The Chronicle of Akakor.

The longest part of his story was about the Indians' struggle against the whites, against Spaniards and Portuguese, rubber planters, settlers, adventurers and Peruvian soldiers. They drove the Ugha Mongulala, whose prince he claimed to be, further and further into the Andes, even into the subterranean settlements. He was now appealing to his bitterest enemies, the white men, for help because of the imminent extinction of his people.

Tatanca Nara's story only began to seem plausible when I met my friend, the Brazilian officer M. He was part of

the Second Department, a member of the secret service. M. had known Tatanca Nara for four years and confirmed that the chieftain had saved the lives of twelve Brazilian officers whose aeroplane had crashed in the province of Acre and led them back to civilisation. The Indian tribes of the Yaminawa and Kaxinawa revered Tatanca Nara as a chieftain, even though he was not of their tribe. These facts were documented in the archives of the Brazilian secret service.

After reviewing Tatanca Nara's tape recordings, I decided to write his story down "in good words and in clear script", as the Indians specify. This book, *The Chronicle of Akakor*, is in five parts. The Book of the Jaguar deals with the colonisation of the Earth by the Gods and the period up to the second world catastrophe. The Book of the Eagle comprises the time between 6,000 and 11,000 years (of their own calendar) and describes the arrival of the Goths. The third book, The Book of the Ant, tells about the struggle against the Spanish and Portuguese colonists after their landing in Peru and Brazil. The fourth

book, *The Book of the Water Serpent*, describes the arrival of 2,000 German soldiers in Akakor and their integration with the Ugha Mongulala people; it also predicts a third Great Catastrophe. In the fifth part, the Appendix, I have summarised the results of my research in Brazilian and German archives. – KB

1. THE REALM OF THE GODS 600,000 BC to 10,481 BC Foreign Masters from Schwerta

The Chronicle of Akakor, the written history of my people, starts at the hour zero, when the Gods left us. At that time, Ina, the first prince of the Ugha Mongulala, resolved to have everything that was going to happen written down in good words and in clear script.

And thus The Chronicle of Akakor bears witness to the history of the oldest people of the world, from the beginning, the hour zero, when the Former Masters left us, until the present time, when the White Barbarians are attempting to destroy our people. It explains the testament of the Ancient Fathers, their knowledge and their wisdom. And it describes the origin of time, when my people were the only ones on the continent and the Great River still flowed on either side, when the country was still flat and soft like a lamb's back. All this is written down in the chronicle, the history of my people since the departure of the Gods, the hour zero, which corresponds to the year 10,481 BC according to the calendar of the White Barbarians:

"This is the story. This is the history of the Chosen Servants. In the beginning, all was chaos. Men lived like animals, without reason and without knowledge, without laws, and without tilling the soil, without clothing themselves or even covering their nakedness. They knew nothing of the secrets of nature. They lived in groups of two or three, as accident

had brought them together, in caves or rock crevasses. They walked on all fours until the Gods arrived. The Gods brought the light."

We do not know when all this happened. Where the strangers came from is only dimly known. A dense mystery lies over the origin of our Former Masters which even the priests' knowledge cannot disperse. According to tradition, the time must have been 3,000 years before the hour zero—13,000 BC according to the

calendar of the White Barbarians.

Suddenly, glimmering golden ships appeared in the sky. Enormous blasts of fire illuminated the plain. The Earth shook, and thunder echoed over the hills. Man bowed down in veneration before the powerful strangers who came to take possession of the Earth.

The strangers said their home was called Schwerta, a world far distant in the depths of the universe where their ancestors lived and from where they had come to bring their knowledge to other worlds. Our priests say that it was a powerful empire made up of many planets, as numerous as grains of dust on the road. And they also say

that both worlds, that of our Former Masters and the Earth itself, meet one another every 6,000 years. Then the Gods return.

With the arrival of the strange visitors to our world, the Golden Age began. One hundred and thirty families of the Ancient Fathers came to the Earth to free man from darkness. And the Gods recognised them as their own brothers. They settled the wandering tribes; they gave them fair shares of all things edible. They worked diligently to teach man their laws, even though their teaching was met by opposition. For all this labour, and for the sake of everything they suffered for mankind and for what they brought and showed us, we venerate them as the bringers of our light. And our cleverest artisans have fashioned images of the Gods that bear witness throughout all eternity to their true greatness and wonderful power. Thus the image of the Former Masters has remained known to this day.

In appearance, the strangers from Schwerta hardly differed from man. They had graceful bodies and white skin. Their noble faces were framed with bluish-black hair. A thick beard covered the upper lip and the chin. Like man, they were vulnerable creatures of flesh and blood. But the decisive sign that distinguished the Ancient Fathers from men were the six fingers on each of their hands and the six toes on each of their feet, the characteristic of their divine origin.

The Chosen Tribes

From the chosen families, the Gods founded a new tribe and gave it the name of Ugha Mongulala, which in the language of the White Barbarians means the Allied Chosen Tribes. And as a token of their eternal covenant, they mated with their servants. Therefore the Ugha Mongulala resemble their divine forefathers to the present day. They are tall; their faces are characterised by protruding cheekbones, a sharply delineated

nose and almond-shaped eyes. Men and women have the same thick bluish-black hair. The only difference from the Gods were the mortals' five fingers and five toes. The Ugha Mongulala are the only white-skinned people on the continent.

Although the Former Masters withheld many secrets, the history of my people nevertheless also explains the Gods' history. The strangers from Schwerta founded a powerful empire. With their knowledge, their superior wisdom and their mysterious tools, it was easy for them to change the Earth according to their own ideas. They divided the country, and built roads and canals. They sowed new plants previously unknown to man. They taught our forefathers that an animal is not only prey but can also be a valuable possession and indispensable against hunger. They patiently imparted the knowledge necessary so that man could grasp the secrets of nature.

The Stone Empire

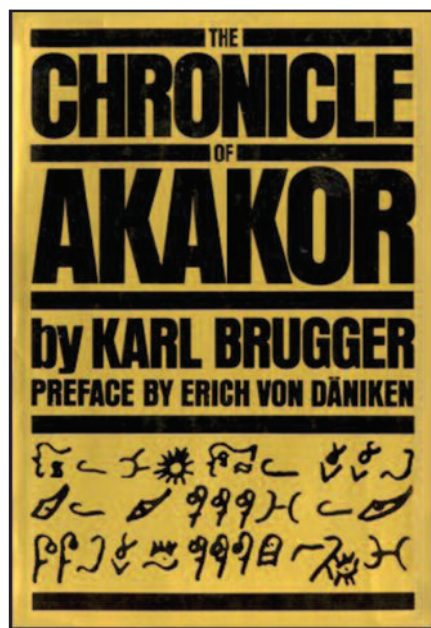

The Chronicle of Akakor, the written history of the people of the Ugha Mongulala, only begins after the departure of the Former Masters in the year zero. But the history of the Chosen Servants reaches back further, into the Golden Age, when the Ancient Fathers were still ruling the Empire. Very few testimonies of this period have been preserved.

The Gods must have established a mighty empire where all the tribes fulfilled allotted tasks. The Ugha Mongulala ranked highest. They were granted a greater wisdom that made them superior to all other peoples. In the year zero, the Gods bequeathed their cities and temples to the Chosen Tribes. They have lasted 12,000 years.

Few White Barbarians have ever seen these monuments or the city of Akakor, my people's capital. Some Spanish soldiers who had been captured by the Ugha Mongulala succeeded in escaping through the subterranean passages. White

adventurers and settlers who discovered our capital have been imprisoned by my people.

Akakor, the capital of the realm, was built 14,000 years ago by our forefathers under the guidance of the Former Masters. The name comes from them as well: *Aka* means "fortress" and *kor* means "two". Akakor is the second fortress. Our priests also tell of the first fortress, Akanis. It was situated on a narrow isthmus in the country that is called Mexico, at

the place where the two oceans touch. Akahim, the third fortress, is not mentioned in the chronicle before the year 7315 BC. Its history is closely linked to that of Akakor.

At the time of our Former Masters' reign, another twenty-six stone cities surrounded Akakor, and they are all mentioned in the chronicle. The largest were Humbaya and Patite in the country that is called Bolivia, Emin on the lower reaches of the Great River, and Cadira in the mountains of the country called Venezuela. But all these were completely destroyed in the first Great Catastrophe thirteen years after the departure of the Gods.

Apart from these mighty cities, the

Ancient Fathers also erected three sacred temple complexes: Salazere on the upper reaches of the Great River, Tiahuanaco on the Great Lake, and Manoa on the high plain in the south. These were the terrestrial residences of the Former Masters and forbidden ground to the Ugha Mongulala. A giant pyramid was erected in their centre, and a broad staircase led to the platform where the Gods celebrated ceremonies unknown to us. The main building was surrounded by smaller pyramids interconnected by columns, and further away, on artificially created hills, stood other buildings decorated with glittering plates. In the light of the rising Sun, the priests relate, the cities of the Gods seemed to be aflame. They radiated a mysterious light, shining in the snowy mountains.

The temple precincts have also remained a mystery to my people. Their buildings are testimonies to a higher knowledge, incomprehensible to humans. For the Gods, the pyramids were not only dwelling-places but also symbols of life and death. They were a sign of the Sun, of light, of life. The Former Masters taught us that there is a place between life and death, between life and nothingness, which is subject to a different time. For them, the pyramids were a link with the second life.

The Subterranean Dwellings

"Great was the knowledge of the Former Masters; great their wisdom. Their vision reached to the hills, the plains, the forests, the seas and the valley. They were miraculous creatures. They knew the future. Truth had been revealed to them. Farsighted they were and of high resolve. They erected Akanis and Akakor and Akahim. Truly, their works were mighty, as were the methods they used to create them: the way they determined the four corners of the universe and the four sides. The lords

CHRONOLOGICAL TABLE

Calendar of the Ugha Mongulala	Our Calendar	Events in the Tribe of the Ugha Mongulala
ca. 3,000 before the hour zero	ca. 13,000 BC	Arrival of the Gods and the choosing of the tribes
0, hour zero	10,481 BC	Departure of the Gods

11,051-12,012	AD 570-1531	Thousand years of peace
12,013	AD 1532	Arrival of the Spanish in Peru

The largest building is the Great Temple of the Sun, which towers above the dwellings of the priests and their servants, the prince's palace, the lodgings of the warriors and the modest houses of the people. In the interior of the temple are twelve entrances to the tunnels that link lower Akakor with other underground cities. They have sloping walls and a flat roof. The tunnels are large enough for five men walking upright. Many days are needed to reach one of the other cities from Akakor.

Twelve of the cities—Akakor, Budo, Kish, Boda, Gudi, Tanum, Sanga, Rino, Kos, Aman, Tata and Sikon—are artificially lit. The light changes in accordance with the Sun. Only Mu, the thirteenth and smallest of the cities, has high shafts reaching the surface. An enormous silver mirror disperses sunlight over the whole city. All subterranean cities are crossed by canals carrying water from the mountains. Small tributaries supply individual buildings and houses. The entrances on the surface are carefully

of the cosmos, the creatures of the heavens and the Earth, created four corners and four sides of the universe."

Akakor now lies in ruins. The great stone gate is broken. Lianas grow in the Great Temple of the Sun. On my command, and in agreement with the Supreme Council and the priests, the warriors of the Ugha Mongulala destroyed our capital three years ago. The city would have betrayed our presence to the White Barbarians, and so we relinquished Akakor. My people have fled into the underground dwellings, the last gift of the Gods.

We have thirteen cities, deeply hidden inside the mountains that are called the Andes. Their plan corresponds to the constellation of Schwerta, the home of the Ancient Fathers. Lower Akakor is the centre. The city lies in a giant man-made cave. The houses, arranged in a circle and ringed by a decorative wall, surround the Great Temple of the Sun in the centre. Just like upper Akakor, the city is divided by two intersecting streets, corresponding to the four corners and the four sides of the universe. All roads run parallel to them.

camouflaged. In emergencies, the subterranean dwellings can be sealed off from the exterior world by large mobile rock gates.

Nothing is known to us about the construction of lower Akakor. Its history is lost in the darkness of the most remote past. Even the German soldiers who settled with my people were not able to unveil this mystery. For years, they measured the subterranean installations of the Gods, explored the tunnel system and searched for the origin of the air for breathing, but without success.

Our Former Masters constructed the

underground dwellings according to their own plans and laws that remained unknown to us. From here they ruled over their vast empire, an empire of 362 million people, as written in The Chronicle of Akakor:

"And the Gods ruled from Akakor. They ruled over men and the Earth. They had ships faster than birds' flight, ships that reached their goal without sails or oars and by night as well as by day. They had magic stones to look into the distance so that they could see cities, rivers, hills and lakes. Whatever happened on Earth or in the sky was reflected in the stones. But the underground dwellings were the most wonderful of all. And the Gods gave them to their Chosen Servants as their last gift. For the Former Masters are of the same blood and have the same father."

2. THE HOUR ZERO 10,481 BC – 10,468 BC

Departure of the Former Masters and Ominous Signs in the Sky

I know only a few details about the period following the departure of the Former Masters in the hour zero (10,481 BC according to the calendar of the White Barbarians).

The first Great Catastrophe lies like a pall over the events of the first thirteen years in the history of my people. It changed the life of my people and the face of the world. Nobody can imagine what happened at that time, thirteen years after the departure of the Former Masters. The catastrophe was enormous, and our chronicle reports it with terror:

"The Chosen Servants were fearful and terrified. They no longer saw the Sun, the Moon or the stars. Confusion and darkness erupted everywhere. Strange images passed above their heads. Resin dripped from the sky and, by twilight, men were desperate for food. They killed their own brothers. They forgot the testament of the Gods. The era of blood had started."

What happened at that time when the Gods left us? Who was responsible for the catastrophe that threw my people back into darkness for 6,000 years? Once again our priests can interpret the devastating events. They say that in the period before the hour zero, there also existed another nation of Gods that was hostile to our Former Masters. According to the images in the Great Temple of the Sun in Akakor, the strange creatures resembled men. They were very hairy and had reddish skin. Like men, they had five fingers and five toes. But out of their shoulders grew the heads of serpents,

They say that in the period before the hour zero, there also existed another nation of Gods that was hostile to our Former Masters.

tigers, falcons and other animals. Our priests say that these Gods also ruled over an enormous empire. They, too, possessed knowledge which made them superior to men and equals of our Former Masters.

The two races of Gods began to quarrel. They burned the world with solar heat, and each tried to wrest power from the other. A tremendous war between planets started, which drove my people to perdition.

Yet, for the first time, the providence of the Gods saved the Ugha Mongulala. Recalling the last words of our Former Masters announcing the catastrophe, Ina commanded the withdrawal into the underground dwellings. Here they remained until the Earth had quieted, like a bird hiding behind a rock when a storm approaches. The Ugha Mongulala were saved from the catastrophe because they trusted in the Ancient Fathers.

The First Great Catastrophe

The year 13 (10,468 BC according to the calendar of the White Barbarians) is a fateful year in the history of my people. After they had withdrawn into the underground dwellings, the Earth was visited by the greatest catastrophe in memory. It even exceeded the second Great Catastrophe, 6,000 years later, when the waters of the Great River flowed upstream. The first Great Catastrophe destroyed the empire of our Former Masters and brought death to millions of people.

The first Great Catastrophe gave the surface of the Earth a different shape. The course of the rivers was altered, and the height of the mountains and the strength of the Sun changed. Continents were flooded. The waters of the Great Lake flowed back into the oceans. The Great River was rent by a new mountain range, and now it flowed swiftly toward the East. Enormous forests grew on its banks. A humid heat spread over the easterly regions of the empire. In the West, where giant mountains had surged up, people froze in the bitter cold of the high altitudes. The Great Catastrophe caused terrible devastation, as had been predicted by our Former Masters.

And the same thing will happen in the future catastrophe which our priests have calculated from the course of the stars. For men's history runs in preordained paths: everything is repeated, everything returns in a circle lasting 6,000 years. Our Former Masters taught us this law. Again, 6,000 years have gone by since the last Great Catastrophe, and it is 6,000 years since our Former Masters left us for the second time.

Once again, ominous signs appear in the sky. Animals flee in panic. Wars have broken out. Laws are disregarded and held in contempt. While the White Barbarians, out of

NEXUS CONFERENCE

July 24th to 26th

DVDs available now through **E&E Productions**

2010

Voted best Conference yet! Entire 14 DVD set: \$350

AUSTRALIA

or \$35 for each presentation on DVD includes postage within Australia

- 1 • **Dirty Electricity, EMFs & Health** - Donna Fisher (Australia) Author and investigator of the links between ill health and the invisible plague. *Simple solutions for homes, schools & at work.*
- 2 • **The Trillion Dollar Conspiracy & the NWO** - Jim Marrs (USA) Award-winning author and investigative journalist in the fields of UFOs, JFK, 9/11, remote viewing and secret control groups.
- 3 • **Amazing Ancient Archaeological Artefacts** - Klaus Dona (Austria) Art exhibition curator who travels the world in search of unusual artefacts. *Extraordinary evidence of mankind's true heritage.*
- 4 • **The Electric Universe (2010)** - Wal Thornhill (Australia) Key researcher on the electric nature of the cosmos helps us understand the solar system, ancient cataclysms and solar changes. *Includes unique predictions.*
- 5 • **Frequency Healing Technology** - Dr Kathy Forti (USA) Came back from a near-death experience with the blueprint for a new technology. (approx. 70 min) *Experience some beautiful fractal visuals.*
- 6 • **Hidden History** - Jim Marrs (USA) Secrets that connect the Bible, the Knights Templar, Freemasons, The Trilateral Commission & 9/11. *Don't miss either of Jim's popular witty & fascinating presentations.*
- 7 • **Language & Social Control** - David-Wynn: Miller (USA) How our language has been used to enslave the masses for thousands of years; and what we can do about it. *New insights on 'takeovers'.*
- 8 • **The Expanding Earth & 2012** - Dr James Maxlow (Australia) Geologist and leading advocate of the Expanding Earth hypothesis and what we can expect in the future. *Includes animated models of shifting Poles.*
- 9 • **UFOs, Exopolitics and Disclosure** - Stephen Bassett (USA) Leading advocate for ending government secrecy about an extraterrestrial presence engaging the human race. *Antigravitic technology solutions.*
- 10 • **HCG Hormones, Body Fat & Health** - Sherrill Sellman (USA) Discovers an unusual and effective way of losing weight without the usual side effects of traditional diets. *See the rejuvenating results.*
- 11 • **Sacred Geometry & Unified Fields** - Nassim Hamein (USA) Physicist presents new concepts explaining how we are all interconnected & can access infinite knowledge. **Plus** NEXUS Magazine Editor:
 - **Duncan Roads - A Part of the 'Big Picture'?** (30 minutes) *A shocking yet empowering exposé.*
- 12 • **They Lied to Us in Sunday School** - Ian Ross Vayro Noah & biblical intrigues. *Back by popular demand*
- 13 • **Communicating with Animals** - Trisha McCagh (Australia) Animal Whisperer explains 5 levels of communication with the animal kingdom. Interacts with pets & in the wild. *Incredible tales not to be missed!*
- 14 • **SUMMARY HIGHLIGHTS** of the 3 day conference on a special 2 hour DVD or VHS only \$45

PORPHYRIA: The Ultimate Cause of Common, Chronic & Environmental Illnesses

by Steven Rochlitz, PhD

Steven Rochlitz, PhD, Cottonwood, Arizona, USA © 2009, 2010

ISBN 978-0-945262-59-6 (170pp sp/b)

Available: www.wellatlast.com

The missing link with chronic and/or environmental illnesses may be porphyria, a set of genetic metabolic disorders whereby the body cannot make the haem protein properly. Instead, it produces porphyrins which are toxins that then build up in the cells and organs, creating conditions exacerbated by exposure to toxins, drugs, stress or micro-organism overgrowth. Last edition we ran Dr Steven Rochlitz's porphyria article and pointed out his book—the first of its kind with an holistic/integrative approach to treating this disorder with diet, supplements and energy balancing.

Most people know next to nothing about porphyria and may dismiss it as having no relevance for them; but when 20 per cent of the population has this genetic defect, it's advisable to check whether your own chronic

health conditions or allergic tendencies are caused by porphyria. Medical practitioners should also take note: they owe it to their patients, whose illnesses they may have misdiagnosed and incorrectly treated without this vital clue.

Whether you have issues with food allergies, anxiety, multiple chemical sensitivities, *Candida* outbreaks, chronic fatigue, thyroid disease, mercury poisoning, addictions, hypertension or Alzheimer's disease, the information in Dr Rochlitz's guidebook may answer your prayers.

ENERGIZING WATER

by Jochen Schwuchow, John Wilkes, Iain Trousdell

Sophia Books, Forest Row, UK, 2010

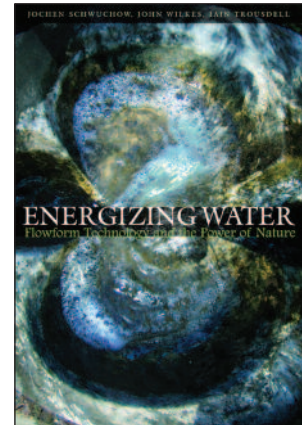

ISBN 978-1-85584-240-3 (117pp tpb)

Available: www.rudolfsteinerpress.com

Since the 1950s, pioneers such as John Wilkes have been researching the energetic and life-supporting qualities of water. Inspired by the biodynamics principles espoused by Rudolf Steiner and the vortex phenomena identified by Viktor Schauberg, Wilkes, a co-author of this marvellous book *Energizing Water*, invented the Flowform® eco-technology system based on nature's subtle metamorphic and rhythmic processes. Wilkes co-founded the

Healing Water Institute in Sussex, England, in 1975, with the purpose of researching and developing ways to rejuvenate water with its natural vitality and spreading the message.

Flowform designs incorporate figure-of-eight patterns that mimic the natural rhythmic movements of water as it cascades through its natural surroundings. The Institute's research should silence the sceptics, as it shows that seedling and root growth is enhanced with Flowform-treated water as compared with controls using untreated tap water. Additional improvements have been observed when cosmic influences such as lunar phases are taken into account. This book shows how we can restore water's natural, life-giving function under its own terms.

BEYOND BELIEF

by James F. Coyle

Vivid Publishing, Fremantle, Aust, 2010
ISBN 978-1921787-17-1 (325pp pb)

Avail: www.vividpublishing.com.au;
www.nexusmagazine.com

Billed as "the ultimate mind-power instructional manual", James Coyle's book *Beyond Belief* does not disappoint. For over 20 years, Coyle, whose background is in hypnosis and electronic design, has been researching the latest scientific findings about the power of the mind and has been applying these to real-life situations. Morphogenetic fields, the holographic mind and synchronicity are part of the big picture, and Coyle divulges methods for tapping into all these and more.

Have you ever known that something is about to happen and are proved right? This "mental gut feeling" is what Coyle calls Mind Surge, and he's developed programs to develop this keen intuitive sense: alpha personal mind control, subjective communication, the mental pendulum, remote viewing, psychokinetic problem-solving and dream control being among them.

Years ago Coyle identified the phenomenon of luck cycles, and here he expands on the idea by adding psychokinetics to the equation.

Amazingly, he says, we can program our mind to attract good luck, be it in money or love, and he provides exercises to help develop this higher sense. He also cautions about some pitfalls of the law of attraction, but encourages us to aim for the stars. This book could well change your life for the better in exciting ways.

EARTHING

by Clinton Ober, Stephen T. Sinatra, MD, and Martin Zucker

Basic Health Publications, CA, 2010
ISBN 978-1-59120-283-7 (258pp tpb)

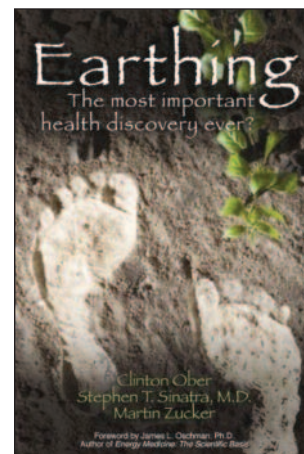

Available: www.basicealthpub.com

As you'll find out in this surprising book, all life forms, humans included, need to connect with the ground, whether grass, dirt, sand or even concrete, to draw in the Earth's electrical energy in the form of free electrons that fluctuate at various frequencies. This "grounding" resets the body's natural grounded state, equalising it with the Earth's electrical energy level or potential. It also combats myriad conditions that are related to an electron deficiency in the body's systems: inflammation (which itself can be responsible for scores of illnesses), ageing, immune dysfunction and more.

While knowledge of this Earth energy connection is common in

traditional cultures, it took a cable TV entrepreneur, Clint Ober, to rediscover it, research its scientific basis and develop products that can keep us electrically grounded, whether in bed or at work. Ober is joined here by cardiologist Stephen Sinatra, MD, who is helping his patients reverse heart disease, and by Martin Zucker, a veteran writer in the alternative medicine field. The foreword is by biophysicist Dr James L. Oschman, who is researching this promising energy medicine. The scientific/technical discussion is easy to follow, and the testimonials from people who've benefited from Earthing are amazing (see www.earthinginstitute.net for more info).

So, go outside and get grounded!

REVIEWS

HOMO SERPIENS

by Aeolus Kephias

Adventures Unlimited Press, 2009
ISBN 978-1-935487-00-5 (244pp tpb)
Avail: www.nexusmagazine.com or
adventuresunlimitedpress.com

History gives only part of the picture of the past; to understand it more deeply, we need to look below the layers into occultism and beyond. Aeolus Kephias who's devoted much of his life to studying philosophy and folklore, explains that a thread of occult worship, or "sorcerous knowledge", including of archetypes, beliefs and magical practices, runs from the Egyptian religion into Judaism, Gnosticism and Christianity. These socio-religious systems have shaped our progress over the millennia. In recent times, we see them expressed in UFO contact cults and abduction rituals.

To go deeper, to find the abstract core, Kephias says we need to immerse ourselves in myth. In *Homo Serpiens*, he creates a myth about the way myths shape our existence. Myth is the common ground where scientist and priest can "bury their respective hatchets", he says. It's the burial ground of old worlds and the birthing place of the new.

But to immerse oneself means at least to confront the reality of occult

conspiracies peopled by rather nasty humans harnessing energy from the lower dimensions, the Nazi occultists being one example. Yet it also means exploring even deeper processes of DNA and kundalini activation, mutating and spiralling from personal to galactic consciousness to become "*Homo serpiens*", Cosmic Man, the fusion of all opposites. If we become conscious of our own divine nature, it might just stick. A profound journey.

WHAT LURKS BEYOND

by Jason Offutt

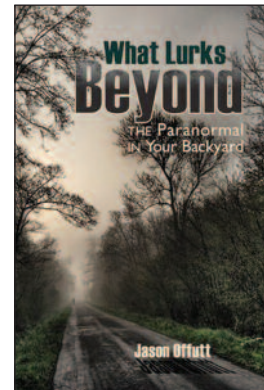

Truman State University Press, 2010
ISBN 978-1-935503-03-3 (180pp tpb)
Available: <http://tsup.truman.edu>

What Jason Offutt sets out to demonstrate in *What Lurks Beyond* is that unexplained phenomena can occur in your own backyard, wherever you live. Offutt (see "Black-Eyed Children", 17/02) lives in Maryville, Missouri, and he has assembled records of 32 paranormal events (some with supporting photos) that have taken place within 100 miles of his home.

The reports include sightings of ghosts in college dormitories, the "Jacob's ladder" time machine of Mike Marcum which allegedly transported him hundreds of years into the

future, 1960s-era séances featuring conversations with Mark Twain, and the Black Angel statue in an Iowa cemetery which "comes alive" at night. In addition, there are numerous reports of UFO sightings, encounters with spectral beings, near-death experiences involving angelic entities, eyewitness accounts of Bigfoot, ghostly footprints photographed in carpet, and the story of Jim the Wonder Dog who could read words as well as minds.

In his quest, Offutt travelled through four states, so he has some important tips for anyone wanting to do the same: ask for permission to enter private property, and remember that ghosts and UFOs don't have time schedules. The paranormal can be frightening, he warns, but fun as long as you keep an eye on safety.

REVIEWS

THE ART OF CLOSE ENCOUNTERS

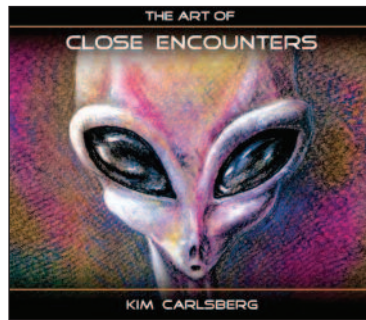

by Kim Carlsberg

Close Encounters Publishing, CA, 2010

ISBN 978-1-4507-3268-0 (349pp hc)

Avail: www.nexusmagazine.com or

CloseEncountersPublishing.com

Following a series of alien close encounters that began in 1988, Kim Carlsberg wrote *Beyond My Wildest Dreams*, a landmark book in the genre at that time (with amazing images by illustrator/channeller Darryl Anka).

Now, to Kim, her new book is an extension of her record. It hums with her own contributions as well as those from numerous sources about experiences with UFO sightings and interactions with alien entities by direct contact/abduction as well as via dreaming and psychic states.

A noted photographic artist, Carlsberg has applied her creative talents, along with those of other contributors (including Kesara, David W. Chace, Bryan DeFlores and Corey Wolfe), to interpreting these experiences visually. The result is a handsomely produced book: white reversed-out type on black pages with text on the left and mostly full-colour images on the right. These include captivating illustrations of many types of ETs (Grey and reptilian, Nordic, Tall White and shapeshifting) as well as angels and fairies, plus images of visits to alien spaceships and records of famous UFO events like the Phoenix Lights. While the pictures are enthralling enough, the accompanying text is too fascinating to gloss over; it requires immersion.

Carlsberg reminds us to let go of fear to participate consciously in the

multidimensional cosmos. This is a fascinating presentation of a phenomenon that has many guises.

GEORGE ADAMSKI: A Herald for the Space Brothers

by Gerard Aartsen

BGA Publications, Amsterdam, 2010

(www.biblioteca-ga.info)

ISBN 978-90-815495-1-6 (145pp tpb)

Available: www.amazon.com

Probably the most famous of the early "contactees" in the modern era of the UFO phenomenon was George Adamski (1891–1965), but he was also the most maligned and ostracised for his claims of having photographed UFOs and met with their occupants—at a time when science was beginning to show that our solar system is not conducive to life as we know it on Earth. Now, student of esotericism Gerard Aartsen rehabilitates Adamski's reputation in the light of the Ageless Wisdom teachings which Adamski was exploring long before he was contacted by the Space Brothers. Indeed, Adamski's spiritual bent may well have made him an ideal vehicle for this interplanetary brotherhood to choose to get their message across.

According to Aartsen, Adamski was not "the crackpot from California" that the media made him out to be, but a visionary teacher ahead of his time. Not only did he have a pressing message to impart about our spiritual nature, but an urgent call for us to protect our environment and prevent social and economic injustice in the world. At the dawn of the Aquarian Age, Adamski still has a message to teach us about the universality of life and the individual responsibility required to make our world a better place. As well as archival photos, including Adamski's 1952 Venusian scout ship photo, Aartsen includes selected writings from Adamski on cosmic philosophy and the Space People to help us understand the broader scope of this contactee's mission.

REVIEWS

THE COSMIC CONSPIRACY

by Stan Deyo

Deyo Enterprises, Colorado, USA, 2010
(first pub. 1978; updated 1992, 1998)

ISBN 978-0-9727688-7-0 (300pp tpb)

Available: www.standeyo.com

Stan Deyo's era-defining book *The Cosmic Conspiracy* has gone through several incarnations since its first release. This 2010 edition is declared to be the final, and it includes a new section, reprints of the 1992 and 1998 revisions (which have been out of print for years), the 1978 edition's 200 pages and a larger index.

The adventure starts with Deyo being alerted to the case of missing Cessna pilot Frederick Valentich, who was abducted, aircraft and all, in October 1978 near Tasmania after he reported four very bright lights moving at vast speed over his craft. Deyo had enough connections in intelligence to know that there was indeed a conspiracy afoot to hide information about visiting UFOs and suppressed super-technology being developed on Earth.

So Deyo set to work to enlighten readers on electrogravitic propulsion, Tesla technology, weather warfare, Kabbalist mysticism and numerology, the Elohim, the Illuminati, America's "Great Seal of Deception", and extraterrestrial beings in cahoots with members of a secret cabal.

The updates cover UFOs, the energy crisis and free-energy devices, the New World Order and the farce over the Face on Mars. The final

update is prefaced by Deyo's take on the growing evil and deception surrounding "the end of this age". He cautions us to brace for global food shortages, the collapse of the world economy and cataclysmic Earth changes. The "great global deception" is still going strong, and Deyo reveals his decodings from the Book of Daniel that point to the arrival of aliens posing as gods before the return of the Messiah. We have been warned, again.

THE NASA CONSPIRACIES

by Nick Redfern

New Page Books, NJ, USA, 2011

ISBN 978-1-60163-149-7 (237pp tpb)

Available: www.newpagebooks.com

The US National Aeronautics and Space Administration, NASA, was created in 1958 at the height of the Cold War to counter the Soviets' lead in the new race for space. As well as documenting key aspects of NASA's history, Nick Redfern (*Strange Secrets*, 11/01; *Contactees*, 17/03) delves into the hidden world of the space agency in *The NASA Conspiracies*. Inevitably, space exploration raises questions about the existence of UFOs and ETs, and alien interest in NASA's space ventures was only to be expected. Details are now emerging of UFO sightings by astronauts from the earliest days of the program—reports that their superiors kept in check.

Other areas of interest include the Apollo Moon-landing controversy, "Andromeda strain" speculation involving an alien virus arriving on Earth, the Face on Mars conspiracy and possible sabotage of the *Challenger* space shuttle. Redfern revisits the 1947 Roswell and 1965 Kecksburg UFO crashes and outlines NASA's interest in the alien abduction phenomenon and cooperation with the Vatican. He also documents attempts made to hack into NASA's computers, most recently by Gary McKinnon. Redfern doesn't claim to have the answers but is convinced that NASA's hiding something big from the public.

THE MYSTERY OF U-33

by Nigel Graddon

Adventures Unlimited Press, USA, 2010
ISBN 978-1-935487-10-4 (341pp tpb)

Avail: www.nexusmagazine.com or
adventuresunlimitedpress.com

There's enormous interest in German U-boat history, and the exploits of one particular submarine, U-33, which sank 11 ships and boats off the Irish and western Scottish coasts between November 1939 and February 1940, are no exception. But there's more to be uncovered that's not in the official records.

Nigel Graddon stumbled upon the legends surrounding U-33 during his research into German treasure-hunter and esotericist Otto Rahn (see 15/06). Certainly, Graddon looked into the official histories but he also tracked down disparate information from eyewitnesses, maritime museums, researchers and family of surviving crew members. The U-33, sunk in February 1940 near the Isle of Arran, had on board a top-secret Enigma encoding device, several rotors of which were retrieved. Among the deceased were at least two unknown men (possibly even Rahn); indeed, they may have been involved in an attempt to contact high-level British sympathisers to seek an early political solution to the war, and it's also possible that they were on a mission to unearth secret Templar artefacts housed in Scotland.

Also touched on in Graddon's fascinating speculative history are the

U-boat missions to South America and Antarctica, secret German bases, cargoes of liquid mercury, the mystery of the Holy Lance and the search for the Holy Grail.

THE FORBIDDEN ARCHEOLOGIST by Michael A. Cremo

Bhaktivedanta Book Publishing, 2010
ISBN 978-0-89213-337-6 (244pp hc)
Available: www.torchlight.com; UK
NEXUS Office, tel (0)1342 322854

The ancient wisdom traditions tell us that mankind has existed on Earth for many millions of years, says researcher Michael A. Cremo (*Forbidden Archeology*, 5/06; *Human Devolution*, (11/01)). Since 2001, Cremo has been writing a regular column for *Atlantis Rising* magazine, and *The Forbidden Archeologist* is a compilation of these columns through into 2009.

Cremo discusses the evidence for extreme human antiquity as well as his experiences in presenting his findings at international scientific meetings and at alternative science and new age conferences. He also examines the "filtration process" that keeps knowledge that conflicts with the mainstream version of human history out of the picture. Further, he adds to his theory of human devolution: that as beings consisting of matter, mind and consciousness, we "devolved" or came down from pure consciousness.

Having a particular interest in the Vedic traditions, Cremo dispels the myth that archaeology was introduced to India by 16th-century European travellers; instead, it's a tradition that goes back thousands of years. He cites the example of the sunken city found in the Gulf of Cambay, northwestern India, that could be at least 9,500 years old and may revolutionise our knowledge of Indian history in line with the ancient Puranas. It's a troublesome notion for European scholars who insist that Aryan migration into India commenced around 3,500 years ago.

Cremo's groundbreaking research ensures a compelling read.

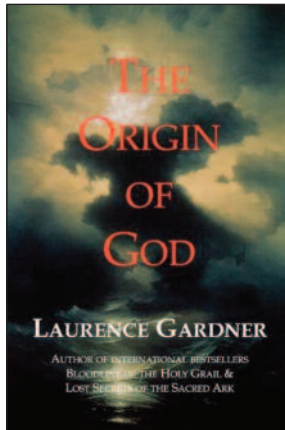

REVIEWS

THE ORIGIN OF GOD

by Laurence Gardner

Dash House, Brockenhurst, UK, 2010
ISBN 978-0-9567357-0-6 (414pp tpb)
Available: dashhousepublishing.co.uk;
UK NEXUS Office, tel (0)1342 322854

In his posthumously published eighth book, Laurence Gardner muses on the origin of the idea of God which is at the core of the monotheistic religions. To find the source of this male "one and only" God figure, Gardner examines written and archaeological evidence going back well beyond the sixth century BC Genesis narrative. He discovered that there's a difference between the way the Old Testament scriptures were written and how they've come to be taught and understood.

Gardner takes us back to Mesopotamia where, despite the pantheon of the ancient Sumerians and the overlords of the Anannage, there are obvious parallels between their stories of Shining Ones, creation and deluge, and those of Genesis. The figure of Adam seems to emerge around the same time as the Sumerian city-states c. 3900 BC.

The earlier polytheistic traditions were supplanted by the Abrahamic Hebrew belief that this God, called El Elyon or El Shaddai, was the most senior judge among the gods, but this was replaced by the Yahweh of the Mosaic Israelites, influenced by the monotheistic Sun-god worship espoused by the Egyptian pharaoh Akhenaten. The Moses "burning

bush" imagery may have sparked the change from a corporeal to a spiritual perception of God, wrapped up in supernatural trappings. That shift may have happened c. 1400 BC.

After exhaustive analysis, Gardner concludes that there is no proof for the existence of the monotheistic God; he can only be said to exist today as "an optional concept based on individual choice". It's a fitting legacy for Gardner who, sadly, died in August 2010. No doubt his final book, *The Revelation of the Devil*, due out this year, will complete the circle.

CHALLENGES OF CHANGE

by Stanley A. Fulham

Amisk Enterprises Ltd, Winnipeg, Canada, 2010 (3rd ed.)
ISBN 978-0-9687321-2-0 (360pp tpb)
Available: email dfulham@mts.net;
www.amazon.com

Stanley Fulham retired in 1971 as a Captain in the Royal Canadian Air Force, having also served at NORAD where he saw evidence of UFO activity on radar. His book, *Challenges of Change*, is a record of 12 years of dialogues with the Transcendor Group—members of a galactic governance council—conducted via a psychic medium. The information from these sessions covers warnings concerning environmental pollution, catastrophic Earth changes, terrorism threats and financial meltdowns, and also shows the need to bring a new spiritual consciousness to mankind. It seems that many galactic civilisations have an interest in our fate here on planet Earth.

In September 2010, Fulham passed on a prediction that UFOs would be seen over key cities on 13 October. His sources were right: there were sightings over New York City that day. In early December, just weeks before his death, he issued predictions for sightings over Moscow in early January (correct) and over London a week later (too soon to tell as we go to press). Perhaps his prediction about a stepped-up ET "intervention process" in 2011 is on the mark.

DVDs

Compiled by Duncan Roads

NEXUS CONFERENCE 2010

14 DVDs in either PAL or NTSC format (90mins each)

Available: E&E Productions, PO Box 444, Oaklands Park, SA 5046, Australia, tel/fax +61 (0)8 8387 9949, www.eande.va.com.au;

www.nexusmagazine.com

In July 2010, hundreds gathered for our regular NEXUS Conference, on the beautiful Sunshine Coast of Queensland, Australia, for three days and two nights of informative talks and presentations. As usual, the wonderful team from E&E Productions made the journey from South Australia to record the event and produce a DVD of each talk. See E&E's website for details of a special deal on a complete boxed set.

1. Dirty Electricity, EMFs and Health, with Donna Fisher.

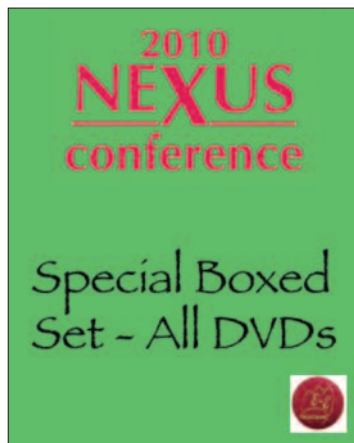

Researcher into the links between ill health and the invisible EMF plague.

2. The Trillion-Dollar Conspiracy and the New World Order, with Jim Marrs. Award-winning author in the fields of UFOs, JFK, 9/11, remote viewing and secret control groups.

3. Ancient Archaeological Artefacts, with Klaus Dona. Art

exhibition curator who travels the world in search of unusual artefacts and evidence of our ancient heritage.

4. The Electric Universe, with Wal Thornhill. This key researcher into the electric nature of the cosmos helps us understand solar changes and ancient cataclysms. Includes predictions for our solar system.

5. Frequency Healing Technology, with Dr Kathy Forti. A near-death experience survivor was given blueprints for a new technology.

6. Hidden History, with Jim Marrs. Secrets connecting the Bible, the Knights Templar, Freemasons, Trilateral Commission and 9/11.

7. Language and Social Control, with David-Wynn: Miller. How our

language has been used to enslave the masses for thousands of years, and what we can do about it.

8. The Expanding Earth and 2012, with Dr James Maxlow. Geologist and international expert on the expanding Earth hypothesis.

9. UFOs, Exopolitics and Disclosure, with Stephen Bassett. Leading advocate for ending government secrecy about an ET presence engaging the human race.

10. HCG, Hormones, Body Fat and Health, with Sherrill Sellman. A new and effective way of losing weight without the usual side effects of traditional weight-loss diets.

11. Sacred Geometry and Unified Fields, with Nassim Hameiri. Acclaimed researcher into quantum physics and consciousness. Includes highlights from my talk on The Big Picture.

12. They Lied To Us In Sunday School, with Ian Ross Vayro. Back by popular demand with more on Noah and biblical intrigues.

13. Communicating with Animals, with Trisha McCagh. World-renowned animal whisperer who explains how everyone can learn to communicate with animals.

14. Summary Highlights of the three-day conference on a special two-hour DVD or video.

REVIEWS

MUSIC

Reviewed by Richard Giles

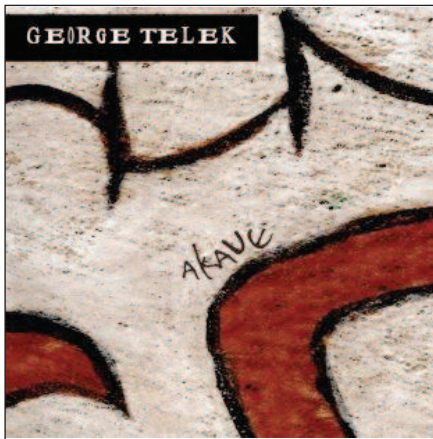

AKAVE

by George Telek

Wantok Musik Foundation, Australia, 2010 (42mins)

Distributors: **Australia**—The Planet Company, tel (02) 9283 8250, www.theplanetcompany.com; www.wantokmusik.org

Papua New Guinea's George Telek has just released *Akave*, his fifth album and his first since 2004. It mixes traditional PNG string band music with modern styles in a great musical collaboration that's already produced a number-one hit in Melanesia with "West Papua (Merdeka Mix)". He's with the Wantok Musik label, dedicated to showcasing indigenous Australian and Melanesian music. Telek sings in English, Kuanuan and Tok Pisin, with styles ranging from traditional acoustic sounds to boppy reggae grooves. Highly recommended.

TIBET: AWAKENED HEART

by Tenzin Choegyal & Taro Terahara

Tenzin Choegyal Music, 2010 (57mins)

Distributors: **Australia**—Perfect Potion, tel (07) 3256 8500; Tenzin Choegyal Music, www.tenzinchoegyal.com

Tenzin Choegyal is Australia's most popular Tibetan musician, playing and performing at festivals around the country. He's renowned for his prowess with flute and voice. Here,

he combines his traditional Tibetan sounds with those of Japanese bansuri flute master Taro Terahara, and together they create songs of happiness, simplicity and tranquillity. The extended flute solos are quite something, and each musician floats his music seamlessly into the other's sounds. A sensitive and beguiling collection with great power and expressiveness. Highly commended.

SHAKUHACHI WATER MEDITATIONS

by Riley Lee

Sounds True, USA, 2010 (64mins)

Distributors: **Australia**—Brumby Books & Music, tel (03) 9761 5535; **USA**—Sounds True, tel 800 333 9185, www.soundstrue.com

In the Zen bamboo flute tradition, "a master does not seek to imitate the sounds of nature; instead, he creates music that speaks to us in the same voice as the natural world". Riley Lee, a Grand Master of the shakuhachi flute, is globally acclaimed for his ability to express the meditative mind in music (see NEXUS 11/06). Here he captures the essence of water with the serenity we feel when gazing out over a mirror-surfaced lake. A quieting album, perfect for healing, meditation and deep relaxation.

THIS IS THE STORY

by Miriam Lieberman

Miriam Lieberman Music, Australia, 2010 (45mins)

Distributors: **Australia**—Brumby Books & Music, tel (03) 9761 5535; www.miriamlieberman.com.au

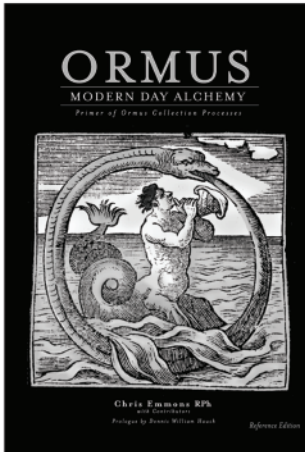

Miriam Lieberman has spent much time in West Africa, especially in Mali, moving between the world of Australian music and the influences of Malian kora master Toumani Diabaté and his Symmetric Orchestra (NEXUS 13/06) and other great Malian musicians. With her powerful vocals and upbeat African rhythms, Miriam tells of her travels. Recorded in both Mali and Sydney, this album is her third and the best yet.

ORMUS: MODERN DAY ALCHEMY

is one book that no Esoteric library should be without. Do not miss an opportunity to own the book that finally explains the time-honoured Ormus collection processes.

What is Ormus?

A group of essential minerals previously unknown to modern science.

Why were they unknown?

Because they did not show up in common scientific tests.

What kind of minerals?

Minerals like gold, silver and platinum - but they are in a different form; and in this other form, they are not toxic. We are discovering they are very common in plants, animals, air, soil and water.

How is it beneficial?

It appears to assist communication between cells in the body and between the body and spirit.

Let us imagine, for a moment, that you have not heard of Ormus: While attending a festival, you overhear conversation between four friends. Excitement is in their voices as they talk about something called Ormus. They talk about having more energy and clarity of thought.

"What is this?" When one asks another, "Have you begun collecting Ormus?" you listen, intent on learning more. They talk about where Ormus can be found and about a book that explains how to collect it.

The friends stop at a food court leaving you with a curiosity and the knowledge of "A Book." That book is Ormus: Modern Day Alchemy.

Here in one book are clear, detailed explanations of time-honoured Ormus collection processes. Included are chapters on the history of Ormus, information about the Ormus material and descriptions of miscellaneous Ormus collection processes.

**Ormus: Modern Day Alchemy.
Primer of Ormus Collection Processes.**

The 21st-Century Renaissance of Science

Continued from page 60

from within computer-generated fractal artwork. The excitement within the artwork itself extends to the realisation that, over the centuries, certain paintings reveal the same phenomenon, created unconsciously by the artist, indicating the existence of an aspect of evolving creative consciousness associated with Plato's spiritual optical engineering principles now linked to the new Fullerene life-science chemistry.

The electromagnetic evolutionary information properties generated into existence by the liquid crystal optical functioning of the fertilised ovum are transmitted to the first bone created within the human embryo. From the humanoid fossil record, each time that bone changes its Golden Mean patterning design a new humanoid species emerges.

It is currently altering its shape under the influence of the same physics forces responsible for seashell evolution, as was discovered by the Science–Art Research Centre during the 1980s. The sphenoid bone is in vibrational contact with the seashell design of the human cochlea. The design of *Nipponites mirabilis* was meant to keep its owner upright in water; the cochlea design is meant to enable humans to balance so as to keep upright on land.

Human Survival Blueprints

The cerebral electromagnetic functioning of creative human consciousness as a Grand Music of the Spheres composition has been adequately charted by Dr Richard Merrick in his book *Interference* (2009).

The work of Dr Diego Lucio Rapoport—a Telesio–Galilei Academy of Science, UK, Gold Medal Laureate in 2010—has incorporated the arts by developing a fractal logic stemming from semiotics associated with self-organising biology principles.

The fullerene life-science of the three 1996 Nobel Laureates in Chemistry has found expression within the medical company C Sixty Inc.

The Science–Art Research Centre considers that Buckminster Fuller's crucial Social Cradle within the Arts, under the auspices of the Florentine New Renaissance Project, might be able to bring to the public an understanding for the global betterment of the human condition.

Kun Huang's research can now be upgraded to generate healthy, sustainable, futuristic human simulations through millions of space-time years, and

from those human survival blueprints the technologies needed for overpopulated Earth to utilise ethically the universal holographic environment are becoming obvious.

The 20th-century adage that ethics is how one uses science is as barbaric as Plato's spiritual engineering classified it. Ethical consciousness has quantum biological properties beyond Einstein's world-view, as has been proven by medical research conducted under the auspices of the Florentine New Measurement of Humanity Renaissance.

Dr Candace Pert's "molecules of emotion", discovered in 1972 and referred to in the films *What the Bleep Do We Know!?* (2004) and *What the Bleep!?: Down the Rabbit Hole* (2006), have been experimentally extended into further realms of holographic life-science reality. Dr Pert's molecules of emotions are the same in humans as in

primitive cells, but have evolved by increasing the speed of their molecular movement. Associated with this emotional evolution is the functioning of endocrine fluids necessary to maintain cellular health. The Florentine life-energy research has established that endocrine fluids evolve within the Earth's holographic electromagnetic environment, affecting health in a manner beyond the

From the humanoid fossil record, each time that bone changes its Golden Mean patterning design a new humanoid species emerges.

understanding of an unbalanced 20th-century world-view.

On 24 September 2010, on behalf of the President of the Italian Republic, Dr Giovanna Ferri awarded the Giorgio Napolitano Medal to Professor Massimo Pregalato and Dr Paolo Manzelli for research conducted in QuantumBioNet/EgoCreaNet by their Florentine New Renaissance Project.

This essay has explained the primary obstacle that has prevented Sir Isaac Newton's "more profound natural philosophy to balance the mechanical description of the Universe" from being brought about. The knowledge of how to correct this situation has become central to the objectives of the Florentine New Measurement of Humanity Renaissance of the 21st Century. This essay is the Birth Registration Certificate of the New Renaissance.

∞

About the Author:

Professor Robert Pope is founder and director of the Science–Art Research Centre of Australia Inc., and is a Science–Art artist and philosopher. In 2008, he co-founded the Florentine New Measurement of Humanity Project, run by Dr Paolo Manzelli of Florence University. For more details, visit <http://www.science-art.com.au>.

The Future of Thought Communication

Continued from page 38

"But if it were as common here among men, as it is doubtless common in the intercourse of the spiritual world, what a change would be wrought!

"If we were involuntarily sharers in one another's pleasures and pains, the brotherhood of the race would not be a pious aspiration or a strenuous effort, but the reality of all others most vividly before us; *the* factor in our lives which would dominate all our conduct.

"What would be the use of a luxurious mansion at the West End and Parisian cooks if all the time the misery and starvation of our fellow creatures at the East End were telepathically part and parcel of our daily lives? On the other hand what bright visions and joyous emotions would enter into many dreary and loveless lives if this state of human responsiveness were granted to the race!"⁸ ∞

*NEW: 2012 & THE SHIFT OF AGES

2012 AND THE SHIFT OF AGES

A Guide to the End of the World

by Alexander Price

Many people in the ancient world saw human life as deeply connected with the great cycles of nature: the rising and setting of the sun, the changing of the seasons, the death and rebirth of vegetation. In the same way that other patterns in nature repeat at regular intervals, they believed that human history also goes through cycles in which significant events repeat, and are likely to happen again in the future at predictable times. A penetrating study into the history of astrology, ancient religion, secret societies and the evolution of consciousness, *2012 and the Shift of Ages: A Guide to the End of the World* is sure to be an invaluable resource in navigating a time of difficult transitions.

You don't believe that such a future is possible? You don't believe that such advanced technology may even exist today but is kept away from the general public?

Consider these two statements with respect to our so-called modern world:

1) We have gone from the horse and buggy to the Internet in 100 years.

2) However, in these 100 years we have thought of no better way to get around than by using the internal combustion engine.

The two statements are not consistent. How can we have such a major advancement of technology in one, yet such an utter failure in the other? The answer is that there *are* other ways to get around. They exist today and we aren't allowed to use them.

The Gridpoint Atlas software will not solve the world's problems.

Only *we* can do that. But, the software will allow avid researchers to gain an understanding of what has come before them, so that they may dream of and demand a better world for ourselves tomorrow.

If we do not demand it from our leaders, they will surely never give it to us. *Ever.* ∞

About the Authors:

- **Captain Bruce L. Cathie (Ret.)** is a former airline pilot who, in 1952 with several witnesses, sighted a UFO in the evening sky at Mangere, Auckland, New Zealand. This led him to discover and plot the World Grid system.

He is the author of six books: *Harmonic 33*, *Harmonic 695*, *Harmonic 288*, *The Bridge to Infinity*, *The Energy Grid* and *The Harmonic Conquest of Space* (reviewed in NEXUS 2/25).

He has contributed several articles to NEXUS, including "The Energy Grid" (2/09), "The Pyramids of China" (2/10), "The Harmonic Conquest of

Space" (2/22), "The Harmonics of Coral Castle" (8/06) and "Volcanic Activity, Nuclear Tests and the Unified Field" (9/02). Bruce Cathie can be emailed at bruce@cathie.co.nz.

- **Rod Maupin** grew up in Oklahoma, USA, and graduated from Oklahoma State University in 1983 with an Architectural Design degree and a minor in Art. For the last 27 years he has worked as a software developer.

He learned about Bruce Cathie in 1988 and began working with him in late 1989. His 21-year collaboration with Cathie has resulted in the development of the Gridpoint Atlas software.

He currently lives in Rainier, Washington, USA. He can be emailed at gridman@worldgrid.net.

- For more information about the Gridpoint Atlas and World Grid software, and to order, go to the website <http://www.worldgrid.net>.

Continued from page 67

sheer arrogance, destroy the link between nature and man, fate approaches fulfilment.

The Ugha Mongulala know that the end is near. They know it and are expecting it in resignation. For they believe in the bequest of their Former Masters. With the image of the Gods in their hearts, they follow in their footsteps. They follow those who are of the same blood and have the same father.

3. THE ERA OF DARKNESS 10,468 BC – 3166 BC

The Collapse of the Empire

Truly, the White Barbarians are a mighty people. They rule the sky and the Earth and are at the same time bird, worm and horse.

They think they are seeing the light, but nevertheless they live in darkness and are evil. And the worst part is that they deny their own God and themselves strive to be God and to

make us believe that they are the rulers of the world.

But the Gods are still greater and more powerful than all the White Barbarians together. They still decide who of us should die and when. Still, Sun, water and fire serve them first. For the Gods do not allow their secrets to be taken from them. Our priests say they will send a judgement that will free the White Barbarians from the burden of their errors. Long and continuous rain will fall and wash away the darkness in their hearts. The waters will rise higher and higher and carry away their wickedness and their lust for power and wealth. ∞

About the Author:

Karl Brugger (1941–1984) was a German foreign correspondent for the ARD network as well as an author, best known for his book *The Chronicle of Akakor* (*Die Chronik von Akakor*, Econ Publishers, Dusseldorf, Vienna, 1976; published in English by Delacorte Press, New York, 1977).

Born in Munich, he studied journalism and contemporary history there and in Paris. Brugger worked as a freelance journalist until 1974 when he became a correspondent for ARD.

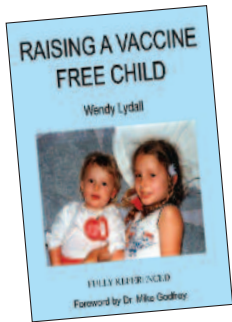

Brugger was shot down in Rio de Janeiro on 3 January 1984 while walking with his friend Ulrich Eucke at Ipanema beach. Neither his killer nor the motive for his killing is known.

Editor's Notes:

- We are well aware of the German documentary which, based upon the book by Rüdiger Nehberg, purports to prove that Tatumca Nara was a fraudulent German worker named Hans Günther Hauck. However, I remain of the belief that the Tatumca Nara exposed in that documentary is not the same person described by Karl Brugger.

- *The Chronicle of Akakor* is out of print, but we are making available a pdf that can be downloaded for a fee from the NEXUS Magazine website, <http://www.nexusmagazine.com>.

RAISING A VACCINE FREE CHILD

RAISING A VACCINE FREE CHILD

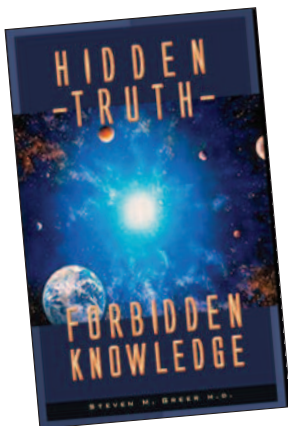

by Wendy Lydall

A well-referenced book which dispels many myths about vaccinations, including that the benefits are worth the risks, that without vaccinations there would be epidemics, and that vaccines are scientifically and clinically tested for their safety and effectiveness. Lydall exposes the sham studies designed to cover up the vaccine connection to SIDS (cot death); and shows that homoeopathic vaccines are bringing an alien vibration into the body, and are not necessarily safe.

Lydall also has information about the denial and/or dishonesty of some health care providers, medical bureaucrats, vaccine manufacturers and high-level officials on vaccine safety issues. Highly recommended!

CONTACT: Countdown to Transformation

by Steven M. Greer, MD

This book goes far beyond the usual accounting of objects seen in the sky and takes the reader into a universe of higher states of consciousness, remote viewing and direct Contact with civilizations that interface with thought and awareness as easily as we talk on cell phones. Journey with the CSETI team as they go beyond the veil of light and the resonant frequency of matter and enter into close contact with numerous ET civilizations who eagerly await the coming Transformation on Earth. The accompanying DVD shows the images, sights and sounds of Contact, as it has evolved over the past 17 years. You will learn how this Contact has been made - and how you, too, can become an Ambassador to the Universe!

Reconnecting to Nature Through Spiritual Permaculture by Leonid Sharashkin

The Ringing Cedars editor reveals worldwide potential for Russia's permaculture garden movement.

The School: Humanity's New Future

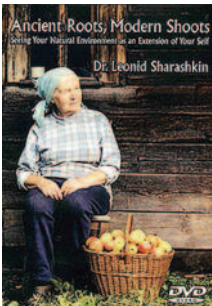

At this Russian school, the children have designed, built and decorated their own campus.

Creating Your Space of Love: The Road Home

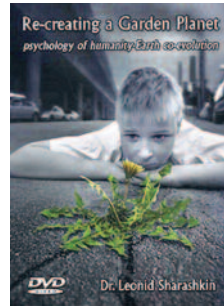

Family domain and eco-village planning, presented by Leonid Sharashkin in Byron Bay.

Ancient Roots, Modern Shoots

"Seeing Your Natural Environment as an Extension of Your Self" by Leonid Sharashkin.

Recreating A Garden Planet

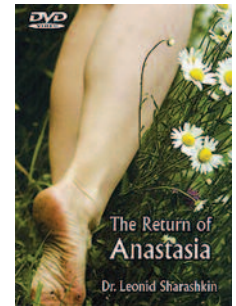

Psychology of Humanity-Earth Co-evolution. Presented by Leonid Sharashkin.

The Eternal Cycle

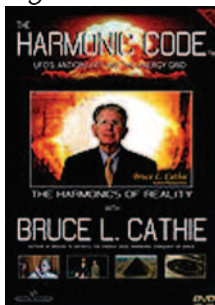

Fertility and Birth in Nature and Human Experience. Presented by Leonid Sharashkin.

The Return of Anastasia

Leo Sharashkin explains the significance of the Russian *dacha* gardening movement.

The Harmonic Code by Bruce Cathie

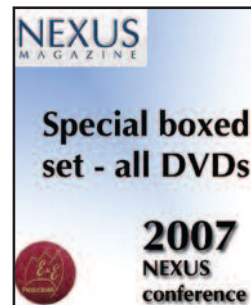

"UFOs, Antigravity and the Energy Grid". Matter, antimatter, time travel, harmonic mathematics etc.

Vaccination: The Hidden Truth

Their ineffectiveness, the manipulated statistics and what vaccines contain exposed in this DVD.

NEXUS Conference DVDs - 2007

Harry Oldfield, George Wiseman, Sherrill Sellman, Meryl Dorey, Dr Ted Loder and more.

NEXUS Conference DVDs - 2008

Books available via NEXUS on Ancient Mysteries and Travel Archaeology/Mysteries

The Giza Death Star

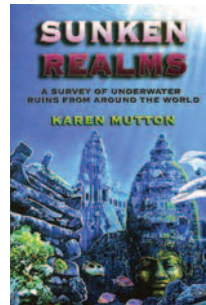

This is physicist Joseph Farrell's amazing book on the secrets of the Great Pyramid of Giza.

2012 and the Shift of Ages

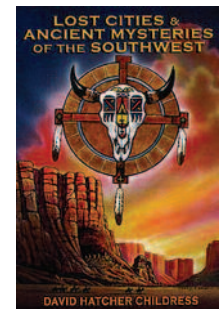

A Guide to the End of the World by Alexander Price. Investigates the cycles of human history and nature.

Sunken Realms

A Survey of Underwater Ruins From Around the World. Includes discussion on causes of sunken cities.

Lost Cities & Ancient Mysteries of the Southwest

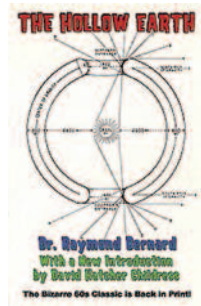

David Hatcher Childress traverses the American Southwest investigating archaeological mysteries.

Axis of the World

A Multi-disciplinary approach across the Americas in search of the oldest American civilisation.

The Hollow Earth

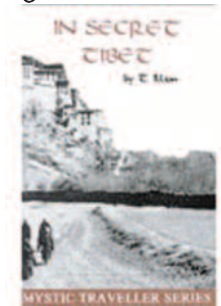

Dr Raymond Bernard's bizarre 60s classic is back in print! New intro by David Hatcher Childress.

The Lost Continent of Mu

James Churchward's classic on the theory of a lost continent in the Pacific. First published in 1931.

In Secret Tibet

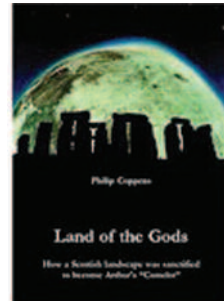

Reprint of a rare 1930s travel book by a German traveller who travelled through forbidden Tibet.

Danger My Ally

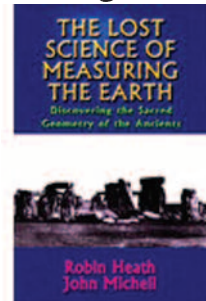

The true life adventure of F.A. Mitchell-Hedges including his discovery of the famous Crystal Skull.

Land of the Gods

How a Scottish Landscape was Sanctified to Become Arthur's Camelot by Philip Coppens.

The Lost Science of Measuring the Earth

Discovering the Sacred Geometry of the Ancients by Robin Heath and John Michell.

Maps of the Ancient Sea Kings

Charles Hapgood's classic 1966 book on ancient maps and world civilisation before Ancient Egypt.
