PO Box 30, Mapleton Qld 4560, Australia

DECEMBER 2011 – JANUARY 2012
Website: <http://www.nexusmagazine.com>

CONTENTS

- LETTERS TO THE EDITOR.....4**
Readers comment on Australia's carbon tax legislation, Britain's health disgrace, thallium poisoning, a simple treatment for burns, climate geo-engineering, the rejection of thermography for mammography, and more.
- GLOBAL NEWS.....6**
We report on a proton-based transistor interface, German bishops caught in a pornography publishing scandal, the US-led bid to overturn the ban on cluster bombs, militant opposition in Syria, and more.
- AL JAZEERA: THE TRIUMPH OF TV PROPAGANDA....11**
By Thierry Meyssan. The Qatari-based Al Jazeera television news network has played a key role in propagating the "Arab spring" myth and in legitimising Arab regimes aligned with the United States and Israel.
- AMERICA'S CONQUEST OF AFRICA.....17**
By Mahdi Darius Nazemroaya and Julien Teil. America and its European and Israeli allies are cooperating to disrupt China's newfound influence in Africa while manipulating insurgencies to fit their hidden agendas.
- PROJECT CENSORED'S TOP 25 NEWS STORIES.....23**
By Project Censored. The editorial team from Sonoma State University has undergone the exhaustive process of evaluating the most important American and global news stories of 2010–2011 that received scant media attention.
- HUMAN MILK: THE TRUE WHITE GOLD.....33**
By Patricia Hatherly. Human breastmilk provides essential nourishment for the infant, but the skin-to-skin contact of breastfeeding imparts a psychological benefit in helping the child develop to full potential.
- THE HIDDEN CAUSE OF CANCER.....41**
By Walter Last. Blood contamination by pleomorphic microbes is the real killer in cancer, AIDS and many autoimmune diseases. Natural remedies that clean the blood and restore immune system vitality offer a solution.
- SCIENCE NEWS.....49**
This edition we publish Patrick Huyghe's tribute to William R. Corliss—physicist, writer and investigator of scientific anomalies—who died in July 2011, leaving a vast body of work including his famous Sourcebook Project.
- INFLUENZA AND THE TB CONNECTION—Part 2.....53**
By Dr Lawrence Broxmeyer. If the microbe that causes influenza is a form of cell-wall-deficient mycobacterium, such as the one responsible for tuberculosis, then we could end up with no defences against another pandemic.
- THE DEEP SECRETS OF A UFO THINK-TANK.....61**
By Anthony Braglia. Since 1946, RAND has been closely involved in the highly classified study of UFOs for the US government, as confirmed by once-secret reports and exposés by members of the military-industrial complex.
- THE TWILIGHT ZONE.....67**
We feature an item about Native American trackers and the power of their hair, and Google Earth images of a remote area of China showing secret facilities, strange geometric features and evidence of violent explosions.
- REVIEWS—Books.....71**
*"Overthrowing the Temple" by Martin J. Walker
"The Chief Sea Lion's Inheritance" by Tom Blaney
"The Hidden Geometry of Flowers" by Keith Critchlow
"The Whale Whisperer" by Madeleine Walker
"The Lost Empire of Atlantis" by Gavin Menzies
"The Master Game" by Graham Hancock and Robert Bauval
"Sunscreens – Biohazard" by Elizabeth Plourde, PhD
"The Bond" by Lynne McTaggart
"Deep Truth" by Gregg Braden
"Big Cats of the Australian Wilderness" by Rex and Heather Gilroy
"The Return of the Rebel Angels" by Timothy Wyllie
"How Wall Street Fleeces America" by Stephen Lendman
"Countdown to Coherence" by Hazel Courteney
"The Kahuna Kit" by Joe Potts*
- REVIEWS—DVDs.....78**
*"The Complete National Geographic – 2010 Edition" from NGS
"Ancient Aliens" from Prometheus Entertainment*
- REVIEWS—Music.....79**
*"Two Voices" by Wouter Kellerman
"Stranger Music" by Suns of Arqa
"...and Love Rages On!" by AOMusic
"Earthsong & Stardance" by Gandalf*
- NEXUS BOOKS, DVDs, ADS, SUBSCRIPTIONS.....87–96**

STATEMENT OF PURPOSE

NEXUS recognises that humanity is undergoing a massive transformation. With this in mind, NEXUS seeks to provide 'hard-to-get' information so as to assist people through these changes. NEXUS is not linked to any religious, philosophical or political ideology or organisation.

PERMISSION-TO-REPRODUCE POLICY

While reproduction and dissemination of the information in NEXUS is actively encouraged, anyone caught making a buck out of it, without our express permission, will be in trouble when we catch them!

Editorial

Two issues ago, in NEXUS volume 18, number 5 (August–September 2011), I spent the entire editorial alerting readers to what I consider to be the true hidden agenda for bringing about a new world order. I was highlighting the points raised in the article titled "Technocracy, Carbon Currency and Smart Grids", written by Patrick Wood. This is our description of the article: "An economic system based on energy production and consumption instead of price, and a global electrical network using interconnected smart technologies, may fulfil Technocracy's ideological plan to exert centralised control over the world's population."

Well, in the last few months we've seen rapid moves towards exactly what was said in that article. The economic crisis in Europe has already resulted in unelected technocrats being installed in both Greece and Italy, and this trend is likely to continue in more countries. On top of this, Australia has taken a major step towards the implementation of the new economic order by adopting a carbon tax. More and more money in both developed and developing countries is being spent on infrastructure that will be part of this new energy order. Do you know that in Greece, the extra money being dragged out of its citizens as part of the "austerity measures" program is paid via the electricity and utility bills? I say forget all the conspiracy theories you have read or heard about: this new global order based on energy currency is being put into place right under our noses.

Okay, on to the articles in this issue. Once again, I would like to reiterate how the gap between the reality you see reported on the news and what is actually going on has become so big that even many NEXUS readers have trouble comprehending the scale of the deception. One example of this is the covert conquest of Africa by the usual suspects, using so-called independent media organisations like Al Jazeera as credible sources. If you live in Australia and watch SBS or ABC TV news, you now see Al Jazeera's logo on nearly every news item dealing with Syria, Libya, Egypt, Pakistan and any of the other "hotspots" where your opinions need massaging. We have two short articles which go a long way towards explaining how the deceptions have been organised.

Another topic that I feel strongly about, and wish more people would understand, is pleomorphism. This is the transformation of one organism into another as a result of changed conditions in the blood. To comprehend this better, it helps if you view blood as akin to soil. We all know that some seeds will not germinate in some soils until conditions change. It is roughly the same with your blood and your health. You can "catch" all sorts of pathogens which might lie dormant forever in your blood; but if your blood chemistry and pH change enough, then many dormant pathogens can "germinate" and flourish. Not only that, but many of these organisms, such as *E. coli*, have been observed to "change" into other more undesirable forms, but only when the blood has become more "toxic". *E. coli* bacteria have been observed to change into other microbes that then change into tuberculosis bacteria and then into *Candida* fungi. We have two articles dealing with this most important subject from different angles. If I were to summarise them, I'd say to you to keep your blood as clean and healthy as possible. It is from toxic blood that *all* illness stems!

Well, 2011 is drawing to a close and the much-anticipated 2012 is just around the corner. I don't believe in sudden doom for 2012, but I *do* believe that change is the only constant in this universe. On that note, I wish all readers everywhere a safe and rewarding journey.

Duncan

Republished plus new information - available now!

CoEvolution

One Monday in mid-February 1989, Alec Newald set off on what should have been a three-hour drive from Rotorua to Auckland in New Zealand.

He arrived in Auckland feeling tired and confused, but was even more confused to learn that Monday was now Thursday ten days later, and that he had no idea of what had happened in the meantime!

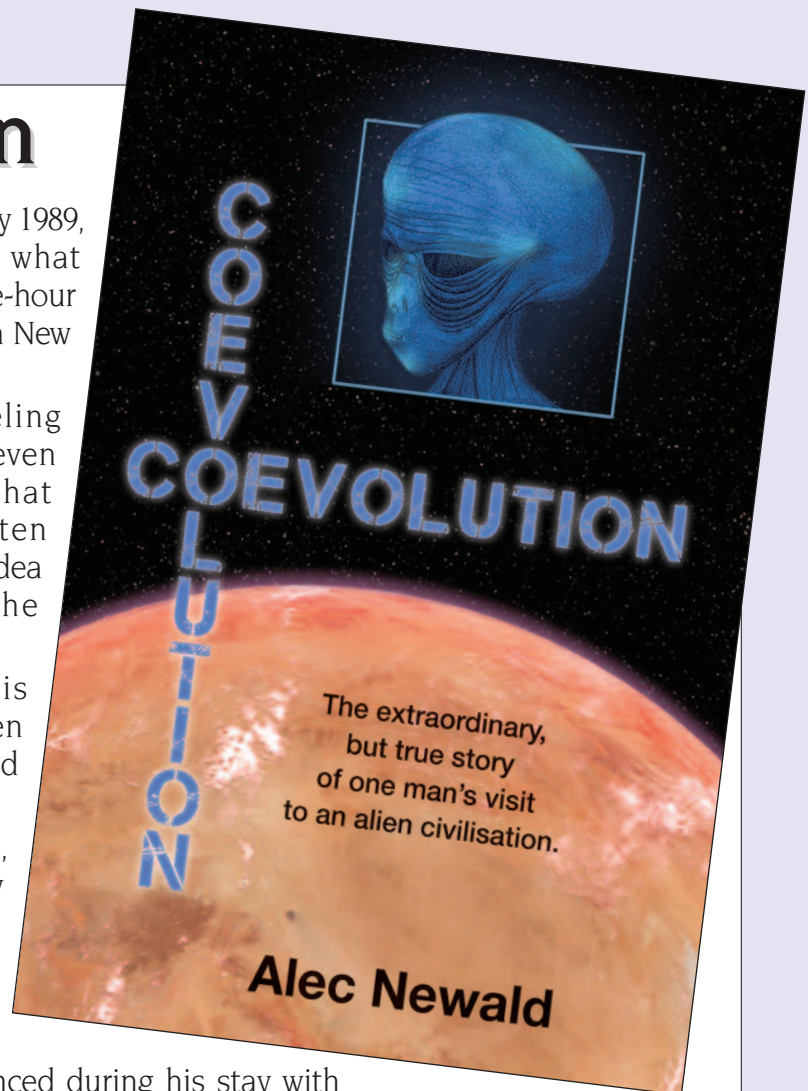

When Alec did retrieve his memories of those missing ten days, he realised his life had changed forever.

Early on in that fateful trip, while driving through a foggy mountain pass, Alec was whisked from the road by beings from an extraterrestrial civilisation.

What he learned and experienced during his stay with these friendly beings has profound implications for all of us here on Earth.

Soon after his 'return', Alec received strange visits from 'government scientists' wanting to know about his experience. Among other things, they were keen to learn what he had noticed about the capabilities of this alien race. Alec was uncooperative and soon found himself in 'hot water'.

It was obvious that these 'scientists' knew all about Alec's 'abductors' and expected they would return to Earth one day—soon.

Letters to the Editor ...

Priceless Information

Dear Editor: A salute to your informative and remarkable magazine.

Thank you for publishing Dr Steven Rochlitz's series of articles [18/06, 18/04, 18/03, 18/01]. All of these presented exceptionally well researched, unique and priceless information.

Barbara, Chicago, USA

Carbon Tax Madness

Dear Duncan: Australia has recently passed a law introducing a carbon tax, to go into effect in July 2012. Other places around the world that already have a carbon tax include Ireland, Norway, Sweden and some states of the USA.

The strange thing about this carbon tax in Australia is that it only taxes *one* of the greenhouse gases (GHG). There are many other GHGs that escape into the atmosphere that will *not* be taxed. A significant one is methane, which has a global warming potential compared to CO₂ at a staggering 105 and 33 more on a mass-to-mass basis for 20 and 100 years respectively.

Shale gas mining and coal seam gas mining are now much more economically viable, even though their GHG footprint, considering the entire extraction and production processes and all the greenhouse gases that are released, is at least as great as or a fair bit higher than that of coal.

The carbon tax is only on the amount of CO₂ released when the fuel is burned at the end use of the product.

In Ireland, full relief from the carbon tax is granted for natural gas if it is shown to

be supplied for use in electricity generation, for chemical reduction or for electrolytic or metallurgical processes. In the USA, the comparison between coal and natural gas is that coal is between \$1.40 and \$1.47 per million btu of fuel and natural gas is only \$0.80.

In Australia, many new liquid natural gas (LNG) production facilities and shipping ports have been approved inside the World Heritage-listed Great Barrier Reef. The construction phase is already causing environmental damage. The fish in these harbours have a strange disease. The large ships that will frequent these harbours cannot slow down quickly and may kill many animals that cannot get out of the way, including the endangered dugong and rare species of dolphin.

It costs even more in fuel to compress this gas, and venting occurs in the process, so the greenhouse gas footprint will be even higher for LNG. Exported gas will not have any Australian carbon tax placed on it, making LNG even more viable for these companies to export.

When you think about it, if the carbon tax is supposed to help the environment, why don't we have a radiation tax? After all, the release of radiation into the atmosphere is causing unprecedented environmental damage around the world. Instead, nuclear power has been touted as a clean fuel because it doesn't release carbon dioxide. Great logic!

Regards,

Catherine S., Queensland

Health Disgrace in the UK

Dear NEXUS: I came away with a copy of your magazine that I saw at Martin Walker's book signing in March and have been trying ever since to pluck up the courage to contact you regarding the National Health Service (NHS) hamster wheel of shame: the lack of any real support for people like my husband, who has an environmentally induced illness, and all the many, many thousands of people like him with multi-organ, multi-symptom conditions.

It is a real disgrace that the money spent on trying to hide this problem could well be used over and over again not only to support these people (and many more) but probably to kick-start the whole UK economy by getting the majority back on the road to recovery and into the workforce again.

As a carer with over 30 years of dealing with my husband's illness, I have now got to the stage where enough is enough. My voice and the voices of others like me just need to be heard, and the real truth in medical and social care in the UK must be confronted.

With respect,

Kate B., UK

Microwave Targeting

Dear NEXUS: I discovered that you've published several articles on covert military weapons that emit microwaves.

I thought I was a normal, average, single mum until I started having problems with a vindictive ex-partner four years ago. Things escalated to the point where

I became aware that I was being targeted by an invisible means that burned my skin and left me with catastrophic side effects.

I was poisoned with thallium last December-January, and miraculously I survived. The only way I discovered that I'd been poisoned is because an American pathology lab could detect the substance. Thallium has been banned since the 1950s.

What countermeasures are there for silent, scared victims like myself? Can you offer help or advice? I've been trying to compile as much evidence as possible regarding electromagnetic radiation.

Kind regards,

Pippa

[Dear Pippa: Sorry, I have no space to reply in detail but there's info out there on the Net. Ed.]

Simple Treatment for Burns

Dear Duncan: Thanks for the best magazine on the planet. I have attached my paper on the Fiji/Schelker Burn Treatment in the hope that you would put it into one of your future issues.

I am attempting to get this information out there so that every person on the planet is aware of this simple and universally available treatment for burns. I have a graphic artist doing a pictorial depiction for the world so that even children can see how to treat the burn.

For the past 15 years, I have been living and practising chiropractic naturopathic medicine in Fiji. Your magazine has been an important part of my life since I discovered it

... more Letters to the Editor

in 1993 when I read your article on the "Chiropractic Cover-up" [see NEXUS 2/16].

I have been compiling everything your magazine has printed on the issues related to vaccinations and will be distributing this to the public for free or for the cost of copying.

Sincerely,

Byron Cragun, DC, Fiji

• The Fiji/Schelker Burn Treatment:

1. Immediately after being burned, get a raw egg and separate the white from the yolk.

2. Apply a generous amount of egg white to the burn with your fingers.

3. Have a fan of some type direct air, or blow with the mouth, onto the egg white to get it to dry.

4. Repeat several times a day, including once before bed, and maybe the next day if necessary.

5. Next day, gently wash off the dried egg white from the skin. Apply fresh egg white if necessary.

The sooner the egg white is applied to the burn, the less chance there is for blistering, infection and scarring. After application, you may choose to go to a health care provider.

[Thanks, Byron. This sounds most interesting. I've also read your more detailed explanation at <http://tinyurl.com/5t7lgyv>. I'd like to add that raw ripe tomato wiped onto burns, especially sunburn, is also a miracle burn treatment. Ed.]

Climate Geo-engineering

Hello Duncan: I have two pieces of information that I would like to share with you.

The first is some news regarding wind turbines.

Near the village where I live, here in France, there turns France's prototype wind turbine with five others that were erected soon after (in the year 2000). They are regularly repaired, at least once a year. Soon they will be past their "sell by" date, and this new invention might save them.

I walk my dogs up around the wind turbines (called *éoliennes* in French) practically every day; wonderful views from the hilltop, but lots of wind!

Please have a look at this news item regarding reducing the cost of wind turbines in California; it's at <http://tinyurl.com/6lzvsg8>.

The second piece of information that I would like to draw to your attention is regarding "chemtrails". Jonathan Benson reported on 21 September 2011: "[T]he Stratospheric Particle Injection for Climate Change Engineering (SPICE) program (yes, this is a real program that confirms the existence of 'chemtrails') has been given \$30,000 to build a giant pipe that spews water and sulfates a [kilometre] up into the stratosphere. Supported at the end by a giant 'stadium-size hydrogen balloon', the pipe will allegedly mimic the effects of a volcanic eruption, which the team building it insists will help to 'cool' the Earth."

This plan to pump toxic sulphate particles into the sky is supposedly designed to send natural sunlight back into space and ultimately prevent the Earth from warming, says a 14 September 2011 *Scientific American* online article

highlighting this new geo-engineering endeavour being undertaken by UK scientists.

Benson goes on to say: "Besides the strangeness of the project itself, the *Scientific American* report's admission that airplanes have already been used as one of the delivery modes for sulfate particles in the past also confirms the existence of chemtrails, or the deliberate aerosol seeding of the sky by planes with unknown particles."

Read the full article at <http://tinyurl.com/3l3odz9>.

I am getting withdrawal symptoms waiting for the next issue of NEXUS. I've re-read lots in the last three issues because there's so much info that I let slip from my mind.

Regards,

Susan G., France

[Thanks, Susan, for your news. It's always nice to hear from our overseas readers. Ed.]

Shag Harbour UFOs

Dear Editor: It was good reading the article on Shag Harbour [18/06]. I always wonder whether there is a connection between that incident and the mystery of Oak Island, which is only 10 miles from Shag Harbour.

Oak Island is said to be the work of Francis Bacon, with connection to the Knights Templar and maybe even to the Holy Grail/Ark of the Covenant. This link at <http://tinyurl.com/236da6g> mentions ancient advanced technology and so, in turn, leads us back to UFOs.

A similar and more recent true or fictitious story is about the finding of an ancient Stargate technology

in the Gulf of Aden, with UFOs and international navy warships in the area.

Regards,
Chan, UK

TGA versus Thermography

Dear Editor: I'm deeply concerned about the continuing actions of the TGA [Therapeutic Goods Administration] in taking away our choices of natural health care in Australia. I sometimes wonder whom the TGA is representing: the public or the sickness-industry vested interests.

If I choose to have a painless, non-invasive, digital thermal breast check, rather than painful, breast-crushing, potentially lymph-drainage-channel-damaging mammography, then that is my decision.

Thermography is an accurate modality that is widely used overseas, and Australian women should have the right to access it. The clinics that have outlaid substantial sums on these machines should be allowed to operate without having their businesses undermined by the TGA.

Mammography gives a cumulative dose of radiation, and research has shown that it can set off a pre-cancerous condition. It is also not infallible.

In addition, I'd like to know why the TGA still allows the use of toxic chemicals and some prescription drugs in Australia which have been banned overseas.

It's time for the Federal government to have an investigation into this supposed regulatory body and its activities.

Alex H., South Australia

DUTCH PROFESSOR FAKED DATA FOR YEARS

A prominent Dutch social psychologist, who once claimed to have shown that the very act of thinking about eating meat makes people behave more selfishly, has been found to have faked data throughout most of his career.

In one of the worst cases of scientific fraud on record in the Netherlands, a review committee made up of some of the country's top scientists has found that Professor Diederik Stapel, of the University of Tilburg, systematically falsified data to achieve the results he wanted.

The university has fired the 45-year-old Stapel and plans to file fraud charges against him, said spokesman Walther Verhoeven.

This year, Stapel co-authored a paper published in *Science* magazine which said that white people are more prone to discriminate against black people when they encounter them in a messy environment, such as one containing litter, abandoned bicycles and broken sidewalks.

Although the paper that linked

thoughts of eating meat with antisocial behaviour was met with scorn and disbelief when it was publicised in August, it took several doctoral candidates whom Stapel was mentoring to unmask him.

The review panel noted that Stapel had enjoyed a position of prestige as a professor and head of his department and that he'd had access to subsidies and funding for his projects as a result of the fraud.

FILLING WITHOUT DRILLING

Researchers at the University of Leeds have discovered a pain-free way of tackling dental decay that reverses the damage of acid attack and rebuilds teeth as new.

Their solution is to arm dentists with a peptide-based fluid that is literally painted onto the tooth's surface. The peptide technology is founded on knowledge of how the tooth forms in the first place, and it stimulates regeneration of the tooth defect.

"This may sound too good to be true, but we are essentially helping acid-damaged teeth to regenerate themselves. It is a totally natural non-surgical repair process and is entirely pain-free, too," said Professor Jennifer Kirkham, from the University of Leeds Dental Institute, who has led development of the new technique.

The study is being funded by credentis AG, which has licensed the technology and is preparing to introduce the P11-4 peptide fluid to dentists worldwide.

(Source: *ScienceDaily.com*, 23 August 2011, <http://tinyurl.com/3oohym8>)

ONE YEAR OF PRISON COSTS MORE THAN ONE YEAR AT PRINCETON

One year at Princeton University: US\$37,000. One year at a New Jersey state prison: US\$44,000.

Prison and college "are the two most divergent paths one can take in life", says infographic researcher Joseph Staten.

Whereas one is a positive experience that increases lifetime earning potential, the other is a near dead-end, which is why Staten found it striking that the lion's share of government funding goes towards incarceration.

We've just arrived. If you want to follow our progress, use the hashtag '#decimatingHumanRace'.

... GLOBAL NEWS ...

America has the highest incarceration rate by population, but is only sixth in the world when it comes to college degrees.

(Source: The Atlantic, 1 November 2011, <http://tinyurl.com/3dhatxn>)

PROTON-BASED TRANSISTOR MAY LET MACHINES INTERFACE WITH LIVING THINGS

Human-made devices, from light bulbs to iPods, send information using electrons. Human bodies and all other living things, on the other hand, send signals and perform work using ions or protons.

Now, scientists at the University of Washington have built a transistor that uses protons, creating a key piece for devices that can communicate directly with living things.

Devices that connect with the human body's processes are being explored for biological sensing and for prosthetics, but they typically communicate using electrons, which are negatively charged particles, rather than protons, which are positively charged hydrogen atoms, or ions, which are atoms with positive or negative charge.

"So there's always this issue, a challenge, at the interface: how does an electronic signal translate into an ionic signal, or vice versa?" asked lead author Marco Rolandi, a UW assistant professor of materials science and engineering.

"We found a biomaterial that is very good at conducting protons, and allows the potential to interface with living systems.

"In our device, large bio-inspired molecules can move protons, and a proton current can be switched on and off in a way that's completely analogous to an electronic current in any other field-effect transistor," Rolandi said.

The device uses a modified form of the compound chitosan, originally extracted from squid pen, a structure that has survived from

when squid had shells. The material is compatible with living things, is easily manufactured, and can be recycled from crab shells and squid pen discarded by the food industry.

CIA HAS RELATIONS WITH MANY TERRORIST GROUPS

Pakistan's Foreign Minister Hina Rabbani Khar claims that the Haqqani network was established by the USA, adding that the CIA also has relations with many other terrorist groups.

In interviews with Arab and American TV networks, she said that the USA itself established the Haqqani network and then accused Pakistan of having ties with it.

She said that the USA should take care of the interests of Pakistan in the war against terrorism, and noted that Pakistan is facing terrorism on a daily basis. No country is able to control terrorism alone, she added.

The Foreign Minister pointed out that Pakistan has sacrificed more people than any other country in the war against terrorism, and that the nation is asking what Pakistan has achieved in this war.

BRITISH MINISTER MISLED MPs OVER DEPLETED URANIUM

The UK Armed Forces Minister, Nick Harvey, has been forced to apologise over misleading statements he made regarding the legality and dangers of depleted uranium (DU) weapons.

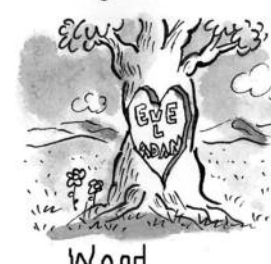

The revelations come as a cross-party campaign is launched to pile pressure on the Ministry of Defence to phase out the use of depleted uranium. In 2013, the tank shells that depend on it have to be renewed.

Depleted uranium is a chemically toxic and radioactive heavy metal produced as waste by the nuclear power industry. DU is included in weaponry because it is an extremely hard material capable of piercing armour. Once the frontline has moved on, however, it can contaminate the environment, and it has been linked to health problems in civilian populations.

The British Army fired shells containing 2.3 tonnes of DU during the 1990-91 and 2003 Gulf wars. DU is used to harden CHARM 3 armour-piercing shells carried by British Challenger tanks.

Data Storage: SIX FORMS

... GLOBAL NEWS ...

UK BACKS BID TO OVERTURN BAN ON CLUSTER BOMBS

Britain is backing a US-led plan to overturn the global ban on cluster bombs, in what MPs and arms campaigners fear is an attempt to legitimise the use of weapons that are widely deemed to be inherently indiscriminate.

In recent years, the UK has played a leading role in trying to rid the world of cluster bombs. It is one of 111 countries that have signed up to the Convention on Cluster Munitions, is on target to destroy its own stockpile, and has ordered the US military to remove any submunitions it holds on British soil.

The world's major cluster-bomb manufacturers—which include the USA, Israel, Russia, China, South Korea, India and Pakistan—have all refused to sign up to the Convention on Cluster Munitions.

Arms campaigners say that the draft proposal would effectively legalise most cluster bombs and be a nail in the coffin of the hard-won cluster bomb ban, which is all but two years old. Austria, Norway and Mexico are leading opposition to the American-led proposal.

GERMAN BISHOPS CAUGHT IN MASSIVE PORN SCANDAL

After 10 years of being warned by faithful Catholics, including in a 70-page dossier sent to all of Germany's main bishops, the scandal of the German bishops' ownership of a publishing company that sells a large volume of pornography has hit the mainstream media.

The German bishops are the owners of one of the most profitable book companies in Germany. The huge company, in addition to offering many religious and other ethical books and items, peddles 2,500 porn titles and additional books highly offensive to Christians.

Weltbild, Germany's second largest bookselling company, is wholly owned by the German bishops and has a US\$1.7 billion annual turnover. Its 2,500 porn titles include every type of perverse sexual fantasy. Weltbild also sells books promoting Satanism, the occult, esoterism and anti-Christian atheist propaganda.

In addition, the bishops own 50 per cent of another company, Verlagsgruppe Droemer Knaur, which produces pornographic novels.

(Source: LifeSiteNews.com, 31 October 2011, <http://tinyurl.com/3pwles4>)

SYRIA'S OPPOSITION PROTESTERS ARE ARMED

The Free Syria Army is literally an Army of militant extremists, many drawn not from Syria's military ranks but from the Muslim Brotherhood, carrying heavy weapons back and forth over the Turkish and Lebanese borders, funded, supported and armed by the United States, Israel and Turkey.

The latest evidence confirming this comes in the form of a report of 15 November 2011 out of the International Institute for Strategic Studies (IISS) in which Emile Hokayem, Senior Fellow for Regional Security, IISS–Middle East, admits that Syria's opposition is armed and prepared to drag the violence into even bloodier depths.

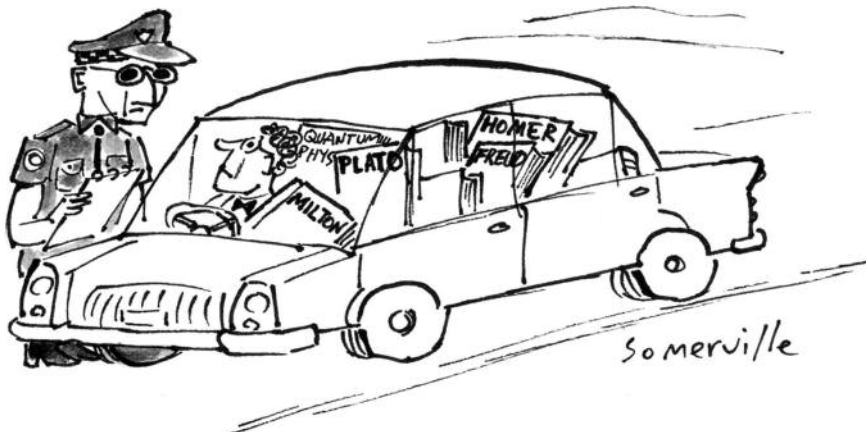

This report comes in sharp contrast to the propaganda fed via the corporate media and the West's foreign ministers on a daily basis, where the violence is portrayed as one-sided with Syria's President Bashar al-Assad "gunning down" throngs of peaceful, placard-waving protesters.

Just as in Libya, where these so-called "peaceful protesters" turned out to be hordes of genocidal racist Al Qaeda mercenaries led by big-oil representatives fighting their cause upon a verified pack of lies, so too is Syria's "pro-democracy" movement slowly being revealed as yet another militant brand of extremists long cultivated by Anglo-American intelligence agencies.

The unrest in Syria from the beginning was entirely backed by western corporate-financier interests and is part of a long-planned agenda for region-wide regime change.

Syria has been slated for regime change since as early as 1991, and in 2002 John Bolton, the then US Under Secretary of State, added Syria to the growing "Axis of Evil".

Later it would be revealed that Bolton's threats against Syria manifested themselves as covert

Four-hundredth motorist arrested for think driving.

... GLOBAL NEWS ...

funding and support for opposition groups inside Syria, spanning both the George W. Bush and Barack Obama administrations.

In an 18 April 2011 CNN article, acting State Department spokesman Mark Toner stated: "We're not working to undermine that [Syrian] government. What we are trying to do in Syria, through our civil society support, is to build the kind of democratic institutions, frankly, that we're trying to do in countries around the globe. What's different, I think, in this situation, is that the Syrian government perceives this kind of assistance as a threat to its control over the Syrian people."

Toner's remarks came after the *Washington Post* released cables indicating that the US has been funding Syrian opposition groups since at least 2005 and has continued to do so to this day.

In an 8 April 2011 AFP report, Michael Posner, the Assistant Secretary of State for Democracy, Human Rights and Labor, stated that the US government "has budgeted \$50 million in the last two years to develop new technologies to help activists protect themselves from arrest and prosecution by authoritarian governments".

The report went on to explain that the United States "...has organized training sessions for 5,000 activists in different parts of the world. A session held in the Middle East about six weeks ago gathered activists from Tunisia, Egypt, Syria and Lebanon who returned to their countries with the aim of training their colleagues there."

Posner added: "They went back and there's a ripple effect."

That ripple effect of course is the "Arab spring", and in Syria's case is the impetus for the current unrest threatening to unhinge the nation and invite foreign intervention.

PROMINENT DENTISTS SAY FLUORIDATED WATER IS HARMFUL

Breaking away from dental school dogma, more dentists are speaking out against fluoridation because fluoride chemicals, added to the water supply to reduce tooth decay, are actually a money-wasting health risk, reports the New York State Coalition Opposed to Fluoridation (NYSCOF). Hydrofluosilicic acid, a lead- and arsenic-laced chemical left over from making phosphate fertiliser, is New York City's fluoride chemical of choice. In 2008, fluoridation cost NYC approximately US\$25 million.

Dr Caree Alexander, a former Royal Australian Navy practitioner and a private-practice dentist for 20 years, says that fluoridation is "totally ineffective and actually damaging as well". Dr Alexander says: "[W]hen I graduated from university, we weren't given any information about where [fluoride] came from. We all assumed it was [pharmaceutical-grade] calcium fluoride."

Prominent New York City dentist Dr Thomas Connelly writes: "I do not see the good in fluoridating our drinking water... To me, the 'bad' it can do outweighs the good."

Dr Andrew Harms, former president of the Australian Dental Association, who once supported fluoridation, says in the video documentary *Fire Water*: "I deeply regret this... [W]hen I did read the science about 10 years ago, I started to get serious concerns." He adds: "[T]o my amazement, when I tried to raise the issue with the [Australian] Dental Association, whom I thought were interested in the science and... integrity, there was no interest. In fact, there was a lot of pressure against me to say anything at all. There was a great concern about upsetting our principal sponsors, the toothpaste manufacturers, who heavily compromise our university."

Dr Hardy Limeback, professor of preventive dentistry at the University of Toronto, apologised for promoting fluoridation because toxicology research shows that the purported benefits no longer outweigh the risks.

Dr Bill Osmunson, spokesperson for the Fluoride Action Network, promoted fluoridation for 25 years until his patients persuaded him to read the science. "It [was] like a knee in the gut," he says. "Science has turned against fluoridation and we must stop adding fluoride to water."

Dr David Kennedy, International Academy of Oral Medicine and Toxicology (IAOMT) past president and fluoride information officer, says: "Water fluoridation delivers a drug to infants at a level which would be gross malpractice if prescribed by a physician or dentist."

Over 3,790 professionals, including 324 dentists, have signed a statement opposing water fluoridation (see <http://tinyurl.com/86mkhad>).

Attorney Paul Beeber, NYSCOF president, says: "The National Research Council reported that fluoride, even at levels used for fluoridation, can damage bones and teeth, disrupt thyroid function and be harmful to kidney patients, and that studies linking fluoride to lowered IQ and cancer are plausible." He adds: "All New York State communities should stop fluoridation as soon as possible."

Dr Jennifer Luke says: "My [published] work showed that fluoride accumulates in the human pineal gland and lowers melatonin production in animals. I find it extraordinary that no government promoting fluoridation has chosen to pursue these worrying findings."

Dr Elise Bassin published unrefuted scientific evidence showing that fluoride can increase the risk of osteosarcoma (a type of bone cancer) in boys and young men.

About 250 communities have stopped fluoridation in recent years. (Source: PRNewswire, 5 October 2011, <http://tinyurl.com/6swcjjc>)

AL JAZEERA AND THE TRIUMPH OF TELEVISED PROPAGANDA

The Qatari-based Al Jazeera television network has played a key role in propagating the “Arab spring” myth, by broadcasting lies and staged images, and in legitimising Arab regimes aligned with the United States and Israel.

The Qatari news channel Al Jazeera, which in the space of 15 years established itself in the Arab world as an innovative news outlet, suddenly embarked on a vast intoxication campaign to overthrow the regimes of Libya and Syria through any means. This was not a conjunctural shift but one that was planned long in advance by individuals who shrewdly concealed their personal interests from the public.

On 20 September 2011, Al Jazeera announced the resignation of its Director General, Wadah Khanfar, and his replacement by a member of the royal family, Sheikh Hamad bin Jassim Al Thani. Sheikh Hamad is a Qatargas executive and spent a year at the head office of Total in Paris. He is the former Chairman of Al Jazeera's Board of Directors.

This development is portrayed by the Atlanticist media in three different ways: as a forced resignation and a takeover of the channel by the State; as revenge on the part of the Palestinian Authority following the release of the Palestine Papers (<http://tinyurl.com/3scyvo4>); and, finally, as the result of the WikiLeaks leak that exposed some of the connections between Khanfar and the United States.

While these interpretations may contain some truth, they nevertheless obscure the overriding factor: the role of Qatar in the war against Libya. At this point, a flash backwards is needed.

Al Jazeera's Origins: A Desire for Dialogue

Al Jazeera was conceived by two French-Israeli personalities, the David and Jean Frydman brothers, after the assassination of their friend Yitzhak Rabin. According to David Frydman, the goal was to create a medium where Israelis and Arabs could discuss freely, exchange arguments and get to know each other, considering that this was prevented by the war situation and thereby frustrated any peace prospect.¹

For the creation of the channel, the Frydman brothers benefited from a combination of circumstances: the Saudi Orbit company had reached an agreement with the BBC to set up a news broadcast in Arabic. But the political demands posed by the absolutist Saudi monarchy quickly proved incompatible with the professional independence of British journalists. The agreement was terminated and the majority of Arabic BBC journalists found themselves out on the street. They were then recruited to launch Al Jazeera.

The Frydman brothers were eager to have their television station perceived as an Arabic channel. They managed to enlist the new Emir of Qatar, Sheikh Hamad bin Khalifa Al Thani, who with the help of London and Washington had just overthrown his father, who was accused of pro-Iranian sentiments. Sheikh Hamad bin Khalifa soon realised the potential advantages of being at the centre of the Arab-Israeli discussions, which had already lasted for more than half a century and were likely to drag on even longer. At the same time, he authorised the Israeli Ministry of Commerce to open an office in Doha, as

Israel was unable to open an embassy there. Above all, he saw the opportunity for Qatar to compete with the wealthy pan-Arab Saudi media and to own media that could criticise everyone except himself.

The initial financing package included both a down-payment from the Frydman brothers and a loan from the Emir of US\$150 million over five years. A boycott by the advertisers, organised by Saudi Arabia, and the ensuing scantness of advertising revenues finally led to the modification of the initial plan. Ultimately, the Emir became the channel's donor and hence its sponsor.

Exemplary Journalists

For years, Al Jazeera's audience was captivated by its internal pluralism. The channel took pride in giving free rein to opposing viewpoints. The idea was not to tell the truth, but to have it spring from the debate. Its flagship program—the talk show, hosted by the iconoclastic Faisal al-Qassem, entitled *The Contrary View*—took delight in shaking up prejudices. Everyone could find reason to eulogise certain programs and to deplore others. Regardless, this effervescence prevailed over the monolithism of its competitors and changed the Arab audiovisual landscape.

The heroic role of its reporters in Afghanistan and in the 2003 Gulf War, as well as their exemplary work in contrast to the propaganda of the pro-US satellite

channels, catapulted Al Jazeera from a controversial channel to an acclaimed media outlet. Its journalists paid a high price for their courage: George W. Bush stopped short of bombing the studios in Doha, Qatar, but had Tareq Ayyoub assassinated,² Tayseer Alouni arrested³ and Sami al-Hajj imprisoned at Guantánamo Bay.⁴

The 2005 Reorganisation

However, all good things come to an end. In 2004–05, after the death of David Frydman, the Emir decided to overhaul Al Jazeera completely and create new channels, including Al Jazeera English, at a time when the global market was changing and all major states were equipping themselves with news satellite channels. The moment had come to leave the excitement and impudence of the early period behind in order to capitalise on an audience now

reaching 50 million viewers and to position itself as a player in the globalised world.

Sheikh Hamad bin Khalifa called on an international firm that had already provided him with personal training in communication skills. JTrack had especially targeted Arab and Southeast Asian leaders to train them in the language of Davos: how to project an image that the West wants to see. From Morocco to Singapore, JTrack has trained most of the political leaders, often mere hereditary puppets backed by the United States and Israel, turning them into respectable media personalities. The important thing is not whether they have something to say, but their aptness to impart the globalised rhetoric.

However, having been assigned to high government positions in North Africa, the CEO of JTrack had to withdraw before completing the transformation of the Al Jazeera Group. He handed over the rest of the operations to a former Voice of America journalist who had been working for the Qatari channel for several years and who belonged to the same Muslim congregation as he did: Wadah Khanfar.

Both professionally competent and politically safe, Khanfar strove to give Al Jazeera an ideological tinge. While giving a voice to Egyptian journalist Mohamed Hassanein Heikal, President Gamal Nasser's

Both professionally competent and politically safe, Khanfar strove to give Al Jazeera an ideological tinge.

Wadah Khanfar, former Director General of the Al Jazeera network

former spokesman, Khanfar appointed Sheikh Yusuf al-Qaradawi—whom Nasser had stripped of his Egyptian nationality—as the channel's "spiritual counsellor".

The 2011 Shift

With the revolutions in North Africa and the Arabian Peninsula, Wadah Khanfar dramatically changed Al Jazeera's editorial policy. The Group played a central role in lending credence to the "Arab spring" myth, according to which the people—eager to live in a western-style society—had risen to overthrow their dictatorial regimes and switch to parliamentary democracies. No distinction was made between the events in Tunisia and Egypt and those in Libya and Syria. As for the popular movements in Yemen and Bahrain, they did not draw enough viewers!

In reality, the Anglo-Saxons tried to take advantage of the popular revolts to replay the same "Arab spring" scenario that they had staged in the 1920s to take possession of the former Ottoman provinces and install puppet parliamentary democracies under western tutelage.

Al Jazeera's coverage of the Tunisian and Egyptian revolts was designed to dampen the flames of revolution and legitimise the governments aligned with the United States and Israel. In Egypt, the uprising was harnessed in the interest of a single element of the opposition: the Muslim Brotherhood, embodied by the channel's star preacher, Sheikh Yusuf al-Qaradawi.

Outraged by the new editorial policy and the increasingly frequent recourse to lies,⁵ a number of journalists, including Ghassan Ben Jeddou, walked out, slamming the door behind them.

Who's Pulling the Information Strings?

Nevertheless, it wasn't until the Libyan episode that the masks started to fall. In fact, the boss of JTrack and mentor of Wadah Kanfar is none other than Mahmoud Jibril (the "J" in "JTrack" stands for "Jibril"). This friendly, brilliant, yet shallow manager had been recommended to Muammar al-Gaddafi by his new American friends to pilot the economic opening of Libya after the normalisation of its diplomatic ties. Under Saif al-Islam Gaddafi's control, he was appointed both Minister of Planning and Director of the National Economic Development Board, thus becoming *de facto* the number-two man in the government, having authority over other ministers. At breakneck speed, he forged ahead with the

deregulation of Libya's socialist economy and the privatisation of its public enterprises.

Through his JTrack training activities, Mahmoud Jibril established personal relationships with almost all the Arab and Southeast Asian leaders. He had offices in Bahrain and Singapore. In addition, Jibril created trading companies, including one dealing with Malaysian and Australian timber in partnership with his French friend, Bernard-Henri Lévy.

Mahmoud Jibril started his university studies in Cairo, where he met and married the daughter of one of Nasser's ministers. He later continued his studies in the United States, where he assimilated the libertarian views that he tried to inject into Gaddafi's anarchist ideology. But, more importantly, Jibril joined the Muslim Brotherhood in Libya. It was in this capacity that he placed his co-religionists, Brothers Wadah Kanfar and Yusuf al-Qaradawi, in Al Jazeera.

During the first half of 2011, the Qatari channel became the preferred instrument for pro-western propaganda. It went to great lengths to obscure the anti-imperialist and anti-Zionist aspect of the Arab revolutions, and in each country it picked the actors it intended to support and those it decided to deprecate. Not surprisingly, it supported the King of Bahrain (a student of Mahmoud Jibril), who had his own people gunned down, while Al Jazeera's spiritual counsellor, Sheikh al-Qaradawi, was calling over the air for a *jihad* against al-

Gaddafi and Syria's al-Assad, falsely accusing them of murdering their own people.

With Jibril as Prime Minister of the rebel government of Libya, the height of duplicity was reached when a replica of Tripoli's Green Square and Bab al-Azizia was built in the studios of Al Jazeera in Doha, where footage of false images was shot, portraying pro-US "insurgents" entering Tripoli. Need I mention the insults I received when I denounced this manipulation in the columns of Voltairenet.org? Yet Al Jazeera and Sky News broadcast these false images on the second day of the Battle of Tripoli, sowing confusion among the Libyan people. It was actually only three days later that the "rebels"—almost exclusively from Misrata—entered Tripoli, devastated by NATO's bombs.

The same goes for the announcement by Al Jazeera of Saif al-Islam Gaddafi's arrest and the confirmation of his capture by the Prosecutor of the International Criminal

...a replica of Tripoli's Green Square and Bab al-Azizia was built in the studios of Al Jazeera in Doha, where footage of false images was shot, portraying pro-US "insurgents" entering Tripoli.

Court, Luis Moreno Ocampo. I was the first, through Russia Today (RT), to warn against the manipulation. And again I was ridiculed by some newspapers, until Saif al-Islam Gaddafi turned up in person to wake up the journalists holed up at the Rixos Hotel and lead them to the *real* Bab al-Azizia square.

Questioned in Arabic about such lies by channel France 24, the President of the National Transitional Council of Libya, Mustafa Abdul Jalil, chalked it up to a war stratagem and said that he was delighted to have thus accelerated the fall of Gaddafi's Jamahiriya.

What Future for Al Jazeera?

The conversion of Al Jazeera into a propaganda tool for the recolonisation of Libya was not achieved without the knowledge of the Emir of Qatar but, indeed, under his leadership. The Gulf Cooperation Council was the first to call for an armed intervention in Libya, and Qatar was the first Arab country to join the Contact Group. The Emir funnelled weapons to the Libyan "rebels" before sending in his own ground troops, especially during the Battle of Tripoli. In exchange, he obtained the privilege of controlling all the oil trade on behalf of the National Transitional Council.

It is too early to say whether the resignation of Wadah Khanfar marks the end of his mission in Qatar, or if it

heralds the channel's desire to recover the credibility that took 15 years to build and only six months to lose.

THE STATE OF QATAR

Qatar has been ruled as an absolute monarchy by the Al Thani family since the mid-19th century. Formerly a British protectorate noted mainly for pearling, it became independent in 1971 and has become one of the region's wealthiest states due to its enormous oil and natural gas revenues.

The most important positions in Qatar are held by members of the Al Thani family or close confidants of the family. Since 1992, Qatar has built intimate military ties with the United States and is now the location of the US Central Command's Forward Headquarters and its Combined Air Operations Center.

Qatari Law and Human Rights

In common with other Arab countries of the Persian Gulf, sponsorship laws exist in Qatar. These laws have been widely described as akin to modern-day slavery. The sponsorship system means that a worker may not enter the country without having a *kafeel*, or sponsor, and cannot leave without the *kafeel*'s permission (an exit permit must first be awarded by the *kafeel*). The sponsor has the right to ban the employee from entering Qatar within two to five years of his first departure.

Various governmental sponsors have recently exercised their right to prevent employees from leaving the country, effectively holding them against their will for no good reason. Some individuals after re-signing have not been issued with their exit permits, denying them their basic right to leave the country. Many sponsors do not allow the transfer of one employee to another sponsor.

Qatar is a destination for men and women from South Asia and Southeast Asia who migrate willingly but are subsequently trafficked into involuntary servitude as domestic workers and labourers and, to a lesser extent, into commercial sexual exploitation. The most common offence is forcing workers to accept worse contract terms than those under which they were recruited. Other offences include bonded labour, withholding of pay, restrictions on movement, arbitrary detention, and physical, mental and sexual abuse.

According to the "Trafficking in Persons Report" by the US Department of State, men and women who are lured into Qatar by promises of high wages are often forced into underpaid labour. The report states that Qatari laws against forced labour are rarely enforced and that labour laws often result in the detention of victims in deportation centres, pending the completion of legal proceedings. The report places Qatar at Tier 3, as one of the countries that neither satisfies the minimum standards nor demonstrates significant efforts to come into compliance.

THE ART OF CLOSE ENCOUNTERS - HAS ARRIVED

After a 1988 close encounter in Malibu, California, Kim Carlsberg found herself in a shocking and inexplicable relationship with non-human entities. Carlsberg's journals became *Beyond My Wildest Dreams*, a book which still stands unique in the literature of alien abduction. The private response to her writings was intense in nature and vivid in detail.

Carlsberg's inspired invitation to participate in an encounter anthology gave others the opportunity to share their experiences. The result is a new milestone in the discourse of contact: *The Art of Close Encounters*.

THE COVERT CONQUEST OF AFRICA BY THE USA, FRANCE AND ISRAEL

The United States and its European and Israeli allies are cooperating to disrupt China's newfound influence in Africa and exert economic and military control while manipulating insurgencies to fit their hidden agendas.

by Mahdi Darius Nazemroaya
and Julien Teil ©

Article posted at:
<http://tinyurl.com/6ywdemv>

Order from Chaos?

A repeat of the disorder and pandemonium generated inside Afghanistan is in the works for the continent of Africa. The United States, with the help of Britain, Pakistan and Saudi Arabia, created the brutal Taliban and then eventually waged war on its Taliban allies. Similarly, across Africa, the United States and its allies are creating a new series of future enemies to fight, but after initially working with them or using them to sow the seeds of chaos in Africa.

Washington has literally been helping fund insurgencies and regime-change projects in Africa. "Human rights" and "democratisation" are also being used as a smokescreen for colonialism and war. So-called human rights and humanitarian organisations are now partners in this imperialist project directed against Africa.

France and Israel: Is Washington Outsourcing its Dirty Work in Africa?

Africa is just one international front for an expanding system of empire. The mechanisms of a real global system of empire are at work in this regard. Washington is acting through NATO and its allies in Africa. Each one of Washington's allies and satellites has a specific role to play in this global system of empire.

Tel Aviv has played a very active role on the African continent. Israel was a major supporter of South Africa under the apartheid regime. Tel Aviv also helped smuggle arms into Sudan and East Africa to Balkanise that sizeable African nation while contributing to the destabilisation of East Africa. The Israelis have been very active in Kenya and Uganda. Israel has been present wherever there were conflicts, including ones pertaining to blood diamonds.

Israel is now working with Washington to establish total hegemony over the African continent. Tel Aviv is actively involved—through its business ties and intelligence operations—in securing the contacts and agreements required by Washington for the extension of its interests in Africa. One of Washington's major objectives is to disrupt the development of Chinese influence in Africa. Israel and Israeli think-tanks have also played a major role in shaping the US geo-stratagem in Africa.

France, as a former colonial master and a declining power, on the other hand has traditionally been a rival and competitor of Washington on the African continent. With the rise of the influence of non-traditional powers in Africa, such as the People's Republic of China, both Washington and Paris envisaged ways of cooperating. On the broader global stage, this is also evident. Both the US and several of the major powers in the European Union consider China and other emerging global powers as a threat. They have decided to end their rivalries and work together. Thus, a consensus between Washington and the EU has unfolded, leading to some forms of political integration. This consensus also may have been manufactured by

growing US influence in EU capitals. Whatever the case, it has been boosted since 2007 with the beginning of Nicolas Sarkozy's presidency in France.

Sarkozy wasted no time in pushing for the reintegration of the French military command structure within NATO. The consequence of this action has led to the subordination of the French military to the Pentagon. In 1966, President Charles de Gaulle had pulled French forces out of NATO and removed France from NATO's military command structures as a means of maintaining French independence. Sarkozy has reversed all of this. In 2009, he ordered that France rejoin the integrated military command structure of NATO. In 2010, he also signed an accord to start amalgamating the British and French militaries.

On the African continent, Paris has a special place or niche in the US system of global empire. This role is that of a regional *gendarme* in North Africa, West Africa, Central Africa and all the countries that are former French colonies. France's special role, in other words, is due to its history and its existing, albeit declining, position in Africa, specifically through "Françafrique". The Union of the Mediterranean, which Sarkozy officially launched, is one example of these French interests in North Africa.

The US-based National Endowment for Democracy (NED) has also been working through France's International Federation of Human Rights (Fédération Internationale des Ligues des Droits de l'Homme, FIDH). The FIDH is well established in Africa. The NED has essentially outsourced its work to manipulate and control African governments, movements, societies and states to the FIDH. It was the FIDH and the affiliated Libyan League for Human Rights (LLHR) that helped orchestrate the various pretexts for the NATO war against Libya, endorsed by the United Nations Security Council through unsubstantiated and false claims.

Following Sarkozy's election in 2007, the FIDH started to develop a real partnership with the NED. Both organisations are also partners within the World Movement for Democracy. Carl Gershman, the NED President, even went to France in December 2009 to meet with the FIDH to deepen collaboration between the two organisations and to discuss Africa.¹ Gershman also met individuals considered to be pro-Israeli lobbyists in France.

The partnerships between the FIDH and the NED are mostly based in Africa and the intersecting Arab world. These partnerships operate in a zone that covers countries like Côte d'Ivoire (Ivory Coast), Niger and the

Democratic Republic of Congo. North Africa, which includes Libya and Algeria, has been a specific area of focus for the FIDH, where Washington, Paris and NATO clearly have major ambitions.

The FIDH, which is directly implicated in launching the war on Libya, has also received direct funding in the form of grants from the NED for its programs in Africa. In 2010, an NED grant of US\$140,186 was one of the latest amounts given to the FIDH for its work in Africa.² The NED was also one of the first signatories, along with the LLHR and UN Watch, demanding international intervention against the Libyan Arab Jamahiriya.³

AFRICOM: The Road Towards Conquering Africa

In 2002, the Pentagon started major operations aimed at controlling Africa militarily. They were under the guise of the Pan-Sahel Initiative, which was launched by the US European Command (EUCOM) and the US Central Command (CENTCOM). Under the banner of this project, the US military would train troops from Mali, Chad, Mauritania and Niger. The plans to establish the Pan-Sahel Initiative, however, date back to 2001: the initiative for Africa was actually launched after the tragic events of 11 September 2001 (9/11).

Washington was clearly planning military action in

Africa, which already included at least three countries (Libya, Somalia and Sudan) identified as enemy targets to be attacked by the Pentagon and the White House, according to General Wesley Clark.

Jacques Chirac, the President of France at the time, tried to offer resistance to the US push into Africa by reinvigorating Germany's role in Africa as a means of supporting France. In 2007, the Franco-African summit even opened its doors to German participation for the first time.⁴ Yet Angela Merkel, the Chancellor of Germany, had different ideas about the direction and position that the Franco-German partnership should take in regard to Washington.

In 2001, momentum towards creating the US Africa Command (AFRICOM) had started to build. However, AFRICOM was not officially authorised until December 2006, and it took until February 2007 for the decision to create it to be announced and until September 2007 for AFRICOM to be established. It is important to note that this momentum also received Israeli encouragement because of Israeli interests in Africa. The Institute for Advanced Strategic and Political Studies (IASPS), for example, was one of the Israeli organisations supporting the creation of AFRICOM.

On the basis of the Pan-Sahel Initiative, the Trans-Saharan Counterterrorism Initiative (TSCTI) was

Washington was clearly planning military action in Africa, which already included at least three countries...identified as enemy targets...

launched by the Pentagon in 2005 under the command of CENTCOM. Mali, Chad, Mauritania and Niger were now joined by Algeria, Morocco, Senegal, Nigeria and Tunisia in the ring of African military cooperation with the Pentagon. Later, the TSCTI would be transferred to the command of AFRICOM on 1 October 2008, which is when AFRICOM was activated.

Sahel and Sahara: France's Old Colonial Projects

"Fighting terrorism" and executing "humanitarian missions" are just façades or smokescreens for Washington and its allies. While the stated goals of the Pentagon are to fight terrorism in Africa, the real aims of Washington are to restructure Africa and to establish a neocolonial order. In this regard, Washington has actually adopted the old colonial projects of France in Africa. This move also includes the American, British, Italian and French initiative to divide Libya after 1943, as well as the unilateral French initiative to redraw North Africa. In this scheme, the US and its cohorts planned on creating ethnic wars and sectarian hatred among the Berbers, the Arabs and others in North Africa.

The map used by Washington for combatting terrorism under the Pan-Sahel Initiative says a lot. The range or area of activity for the terrorists, within the borders of Algeria, Libya, Niger, Chad, Mali and Mauritania according to Washington's designation, is very similar to the boundaries or borders of the colonial territorial entity which France, from 1957, attempted to sustain in Africa.

Paris had planned to prop up this African entity in the western central Sahara as a French department (province) directly tied to France, along with coastal Algeria. This French colonial entity in the Sahara was named the Common Organisation of the Saharan Regions (Organisation Commune des Régions Sahariennes, OCRS). It comprised the inner boundaries of the Sahel and Sahara countries of Mali, Niger, Chad and Algeria.

The French goal was to collect and bind all the resource-rich territories of these countries into this one central entity, the OCRS, for French control and extraction. The resources in this area include oil, gas and uranium. Yet, the resistance movements in Africa, and specifically the Algerian struggle for independence, dealt Paris a hard blow. France had to give up its quest and finally dissolve the OCRS in 1962 because of

Algerian independence and the anticolonial stance in Africa. Because of the push towards independence in Africa, France was finally cut off from the inland area in the Sahara that it wished to control.

Washington clearly had this energy-rich and resource-rich area in mind when it drew the areas of Africa that needed to be cleansed of alleged terrorist cells and gangs. The French Institute of Foreign Relations (Institut Français des Relations Internationales, IFRI) even openly discussed this tie between the terrorists and energy-rich areas in a March 2011 report.⁵

It is also in this context that the amalgamation of Franco-German and Anglo-American interests and companies has allowed France to become an integral part of the US system of global empire with common interests.

Regime Change in Libya

Since 2001, the US has falsely presented itself as a champion against terrorism. The TSCTI, which opened the doors for AFRICOM in Africa, was justified as necessary by Washington to fight organisations like the Salafist Group for Preaching and Combat (GSPC) in Algeria and the Libyan Islamic Fighting Group (LIFG). Yet Washington is cooperating with and using these very same groups in Libya, along with the National Front for the Salvation of Libya (NFSL) and the Muslim Brotherhood, as foot soldiers and proxies.

Moreover, many of the key Libyan individuals who are members of the National Endowment for Democracy are members of these groups and also have been part of

conferences and long-standing plans pushing for regime change in Libya.

One of the key meetings for establishing what would become the current National Transitional Council of Libya took place in 1994 when the US-based Center for Strategic and International Studies (CSIS) organised a conference with activists Ashur Shamis and Aly Abuzaakouk. The conference's title was "Post-Qaddafi Libya: The Prospect and the Promise". In 2005, another conference with Ashur Shamis was held in London that would build on the idea of regime change in Libya.⁶

So who are these Libyan opposition figures? A series of questions must be asked. Are their ties to Washington new or old? With whom do they associate? Have they had long-standing support or not?

Ashur Shamis is one of the founding members of the

The French goal was to collect and bind all the resource-rich territories of these countries into this one central entity, the OCRS, for French control and extraction. The resources in this area include oil, gas and uranium.

NFSL, which was founded in 1981 in Sudan. He has been wanted by Interpol and the Libyan police for years.⁷ Shamis is listed as someone who has been a director of the National Endowment for Democracy in the Libya Human and Political Development Forum. He is also the editor of the Akhbar Libya web page, which was registered under Akhbar Libya Cultural Limited and tied to the NED. He has participated in recent key conferences for regime change in Tripoli, including the 2011 London conference held by Chatham House, which discussed NATO's plans for the invasion of Tripoli.⁸

Like Shamis, Aly Abuzaakouk is also a member of the National Front for the Salvation of Libya and tied to the NED. He was a key participant and attendee at the round table held by the NED for the 2011 Democracy Awards.⁹ Like Ashur Shamis, he is also wanted by Interpol and serves as a director of the Libya Human and Political Development Forum.¹⁰

There is also Noman Benotman, a former leader and founder of the LIFG and a wanted terrorist. He is presented as a *former* terrorist. Benotman conveniently left the LIFG on the basis of the 9/11 attacks in the United States. An NED director in the Libya Human and Political Development Forum, he is also tied to the Al Jazeera news network.

Not only have these three men lived in Britain without any problems while being wanted by Interpol and sought because of their ties to terrorism or, in the case of Abuzaakouk, drug-related crimes and forgery, they have also received grants from the United States. These grants formalised their NED organisations, which have been integral to the regime change agenda against the Libyan Arab Jamahiriya. This regime change agenda has also been facilitated with the help of Britain's MI6 and America's CIA.

Moreover, the legal documents that have been filed for the NED organisations of these men have been deliberately and illegally tampered with, and one key individual's identity has been hidden in the list of NED directors. Thus, legal documents have been fraudulently filled out to hide a certain identity under the alias of "Beata Wozniak". Even Wozniak's birthday is invalid, appearing as 1 January 1 (01/01/0001). She is an individual who is present on the boards of all these NED organisations. She is listed as a Director and Secretary of Akhbar, Transparency Libya Limited and several British companies.

The "Long War" Enters Africa

The fanning of terrorism in Africa is part of a deliberate strategy used by the US and its allies, including NATO, for opening the door into the African continent by expanding the so-called Global War on Terror. This will give purpose to the US objective of expanding its military presence in the African continent, and also will justify the creation of the Pentagon's AFRICOM, which is meant to manage Africa by creating an African version of NATO as a means of occupying Africa for Washington. In this regard, the US and its allies have already put budgets aside to fight the very terrorist organisations that they have cooperated with, encouraged, nurtured, armed and proliferated across the map of Africa from Somalia, Sudan, Libya and Mali to Mauritania, Niger, Algeria and Nigeria.

The terrorists not only fight for Washington on the ground, but they also interact with Washington and act as front men through so-called human rights organisations that promote democracy. On the ground, these individuals and organisations destabilise their countries, while they are given forums by Washington to work actively for regime change and military intervention in the name of human rights and democracy. Libya is a clear case of this. ∞

About the Authors:

- Mahdi Darius Nazemroaya is a sociologist and a research associate with the Centre for Research on Globalization in Montreal, Canada (<http://www.globalresearch.ca>). He specialises in the Middle East

and Central Asia. He was on the ground in Libya for over two months and was also a special correspondent for *Flashpoints*, a program based in Berkeley, California. Nazemroaya has been releasing these articles about Libya in conjunction with discussions with former US Congresswoman Cynthia McKinney on *Freedom Now*, a show aired on KPFK, Los Angeles, California.

- Julien Teil is a videographer and investigative documentary filmmaker from France. He was also recently in Libya for about one month.

Editor's Note:

Due to space constraints, we are unable to publish the complete article with maps and endnotes. To view the original article, which includes an introduction by Cynthia McKinney, visit the GlobalResearch.ca web page <http://tinyurl.com/6ywdemv>.

PROJECT CENSORED'S TOP 25 NEWS STORIES

The Project Censored team has undergone the exhaustive process of selecting and evaluating the most important American and global news stories of 2010–2011 that received little or no attention by the mainstream media.

Compiled by
Project Censored © 2011

Each year, the Project Censored team, based at Sonoma State University, California, selects and evaluates thousands of news stories published in the national and international mainstream media as well as in the alternative press. The team ultimately decides on the top 25 most underreported but important stories. Following is an edited summary of Project Censored's 2010–11 selection. To see the full report with sources and references, visit <http://tinyurl.com/3ou5huq>. The book *Censored 2012*, edited by Mickey Huff and Project Censored, is now available. – Editor

1. More US Soldiers Committed Suicide than Died in Combat

In 2010, for the second year in a row, more US soldiers killed themselves (468) than died in combat (462). "If you think you know the one thing that causes people to commit suicide, please let us know," General Peter Chiarelli told the *Army Times*, "because we don't know what it is." Suicide is a tragic but predictable human reaction to being asked to kill—and watch your friends be killed—for a war based on lies. Perhaps being forced to bag the mangled flesh of fellow soldiers could be another reason why some are committing suicide.

Body-bagging: ever heard the term? Soldiers in the Marine Corps' Mortuary Affairs unit at Camp Al-Taqaddum, Iraq, are given this job of collecting and cataloguing the bodies of dead Marines. They sift through the soldiers' remains and put them in body bags which they then place in metal boxes and, in turn, into refrigerated units. They sort through personal effects, from lists and prom photos to suicide notes and love letters, parcel them up and send them back to the Marines' families.

One soldier, Jess Goodell, recounts the case of a Marine brought in to the unit still breathing. She frantically called to her superiors, to which they simply replied, "Wait". She watched while he died. When she returned to the US, Goodell like many others, was diagnosed with deep depression, substance abuse, post-traumatic stress disorder and anxiety.

2. US Military Manipulates the Social Media

The US military is developing software that will let it secretly manipulate social media sites by using fake online personas to influence Internet conversations and spread pro-American propaganda.

A Californian corporation has been awarded a contract with US Central Command (CENTCOM), which oversees US armed operations in the Middle East and Central Asia, to develop an "online persona management service" that will allow one US serviceman or servicewoman to control up to 10 separate identities based all over the world. The CENTCOM contract stipulates that each fake online persona must have a convincing background, history and supporting details, and that up to 50 US-based controllers could operate false identities from their workstations.

The multiple-persona contract is thought to have been awarded as part of a

program called Operation Earnest Voice (OEV), which was first developed in Iraq as a psychological warfare weapon against the online presence of al-Qaida supporters and others resisting the US military and political presence in Iraq. This effort proved successful and is now being used elsewhere in the Middle East and beyond, with assurances that none of these interventions would happen at home as it would be unlawful to "address US audiences" with such technology.

3. Obama Authorises Assassination Campaign

The Obama administration has quietly put into practice an "incomplete idea" left over from the Bush II presidency: creating a *de facto* "presidential international assassination program". Court documents, evidence offered by Human Rights Watch and a special United Nations report allege that US citizens suspected of encouraging "terror" had been put on "death lists".

Reports of the "death lists" say Obama's Director of National Intelligence told a congressional hearing that the program was within the rights of the Executive Branch of the government and did not need to be revealed.

At least two people are known to have been murdered by Central Intelligence Agency operatives under the program.

When the program was challenged in a New York City court, the judge refused to rule, saying that "there are circumstances in which the executive's unilateral decision to kill a US citizen overseas is 'constitutionally committed to the political branches' and judicially unreviewable".

4. Global Food Crisis Expands

A new worldwide spike in agricultural commodity and food prices is generating both predictable and extraordinary fallout. The search for causes once again leads to a conjuncture of flawed policies in trade, environment, finance and agriculture that is likely to produce more dangerous volatility in years to come.

Over the past year, food prices around the world shot sharply upwards, surpassing the previous price surge in 2007–2008 to set a new record, as measured by the UN's Food and Agriculture Organization.

In February 2011, the UN's food price index rose for the eighth consecutive month to the highest level since at least 1990. As a result, since 2010 began, roughly another 44 million people have quietly crossed the threshold into malnutrition, joining 925 million already suffering from lack of food.

If prices continue to rise, this food crisis will push the ranks of the hungry towards a billion people, with

another two billion suffering from the "hidden malnutrition" of inadequate diets, nearly all in the developing countries of Africa, Asia and Latin America. That deprivation will shorten lives and stunt young minds, hitting the most vulnerable populations such as the urban poor of food-importing countries in cities like Cairo, Tunis and Dhaka.

5. Private Prisons Fund Anti-Immigrant Legislation

Over the past four years, roughly a million immigrants have been incarcerated in dangerous detention facilities in the US taxpayer-financed private prison system. Children were abused, women were raped and men died from lack of basic medical attention.

Arizona's Governor Jan Brewer received substantial campaign financing from Corrections Corporation of America (CCA) and GEO Group, which are the nation's two largest companies that finance, design, build and

operate prisons. CCA, based in Nashville, Tennessee, and GEO Group, a global corporation based in Boca Raton, Florida, are the principal moving forces in the behind-the-scenes organisation of the current wave of anti-immigrant legislative efforts. Both CCA and GEO, which rely almost exclusively on revenue from tax dollars at local, state and federal levels, profited from the incarceration of immigrants apprehended by US

Immigration and Customs Enforcement.

CCA's top management in Tennessee contributed the largest block of out-of-state campaign contributions received by Governor Brewer. Brewer employs two former CCA lobbyists as aides; they assisted in signing Arizona SB 1070 into law on 23 April 2010. CCA, which already has several detention facilities in Arizona and is hoping to expand its immigrant business in that state, is expected to show a huge increase in revenues following the implementation of SB 1070.

6. Google Spying via Street View?

In 2010, the Federal Trade Commission (FTC) investigated Internet search engine giant Google for illegally collecting personal data such as passwords, emails and information from other online activities from unsecured Wi-Fi networks in homes and businesses across the United States and around the world. Google has claimed that the data were accidentally picked up by their Street View cars while driving the world's streets. Clearly, this is an invasion of the public's privacy and yet the FTC has done basically nothing about it—not even a slap on the wrist for Google.

In late October 2010, David Vladeck, Director of the FTC's Bureau of Consumer Protection, sent a two-page

At least two people are known to have been murdered by Central Intelligence Agency operatives under the program.

letter to Google attorney Albert Gidari, saying that the FTC has ended its inquiry into the matter, with little more than an assurance from Google that it will make "improvements to its internal processes" and "continue its dialogue with the FTC". Why was nothing done about it?

Less than a week before the FTC's decision to drop the inquiry, President Obama attended a \$30,000-a-person Democratic Party fundraiser at the Palo Alto, California, home of Google executive Marissa Mayer. Also, Google's former head of public policy, Andrew McLaughlin, joined the Obama administration as the deputy chief technology officer in mid-2009. Other Obama administration officials include Eric Schmidt, Google's executive chairman, who serves as a member of the President's Council of Advisors on Science and Technology. Katie Stanton joined the administration as the Director of Citizen Participation after serving as a Google project manager. The former head of Google's global development, Sonal Shah, is now the head of the White House's Office of Social Innovation. These facts suggest that the Obama administration may have a conflict of interest in its handling of the company's civil rights violations.

7. US Army and Psychology

In the January 2011 issue of *American Psychologist*, the American Psychological Association devoted 13 articles to detailing and celebrating a US\$117 million collaboration with the US Army, called Comprehensive Soldier Fitness (CSF). It's being marketed as resilience training to reduce if not prevent adverse psychological consequences to soldiers who endure combat.

Because of the CSF emphasis on "positive psychology", advocates call it "an holistic approach to warrior training".

Criticism arose shortly after the initiative was announced. It included ethical questions about whether soldiers should be trained to be desensitized to traumatic events, and methodological concerns about large-scale programs similar to this which have not worked or have had adverse effects in the past. Also problematic is that this program is adapted primarily from the Penn Resiliency Program, which had very little success with a non-military population. Now, on its first trial run, it is going to train 1.1 million soldiers. How about trying it out on small groups of soldiers first?

The CSF program measures soldiers' "resilience" in

five core areas: emotional, physical, family, social and spiritual. The spiritual component of the assessment contains questions written predominantly for soldiers who believe in God or another deity. This means that tens of thousands of non-believers will score poorly and be forced to use religious imagery exercises that are counter to their personal beliefs—and not likely to foster resilience.

8. The Fairytale of Clean and Safe Nuclear Power

Nuclear power presents a security threat of unprecedented proportions. It's capable of a catastrophic accident that can kill hundreds of thousands of people with a byproduct that is toxic for millennia. To call nuclear power "clean" is an affront to science, common sense and the English language itself, yet industry backers, inside and outside government, are attempting to establish a new Clean Energy Standard to promote nuclear power. These proposals suffer from three fundamental misconceptions, that:

1) pollutants other than carbon dioxide are irrelevant when defining a "clean energy";

2) because radiation is invisible and odourless, it is not a toxic pollutant;

3) nuclear power is carbon-free. None of these is true.

In its most recent report, released in 2005, the US National Academy of Sciences determined that *no* safe level of radiation exposure exists; every exposure to radiation increases the risk of cancer, birth defects and other disease. The US Nuclear Regulatory Commission accepts the linear no-threshold (LNT) hypothesis, which states that any

increase in the dose of radiation, no matter how small, results in an incremental increase in risk, as a conservative model for estimating radiation risk.

9. Government-Sponsored Weather Modification

Rising global temperatures, increasing population and degradation of water supplies have created broad support for the growing field of weather modification.

The US government has conducted weather modification experiments for over half a century, and the military-industrial complex stands poised to capitalise on these discoveries.

One of the latest programs is HAARP, the High-frequency Active Auroral Research Program. This technology can potentially trigger floods, droughts,

...the American Psychological Association devoted 13 articles to detailing and celebrating a US\$117 million collaboration with the US Army, called Comprehensive Soldier Fitness (CSF).

hurricanes and earthquakes. The scientific idea behind HAARP is to "excite" a specific area of the ionosphere and observe the physical processes in that excited area with the intention of modifying ecological conditions. HAARP can also be used as a weapon system, capable of selectively destabilising agricultural and ecological systems of entire regions.

Another EnMod (environmental modification) program is that of atmospheric geo-engineering or cloud seeding, which has found new life since the global warming scare. Cloud seeding involves creating cirrus clouds from aircraft contrails. Unlike regular contrails which dissolve in minutes, these artificial contrails can last for several hours or even days. Once the artificial clouds have been created, they are used to reflect solar or man-made radiation.

At an international symposium held in May 2010, scientists asserted that "manipulation of climate through modification of cirrus clouds is neither a hoax nor a conspiracy theory". The only conspiracy surrounding geoengineering is that most governments and industry refuse to admit publicly what anyone can see in the sky or discover in peer-reviewed research. The Belfort Group has been working to raise public awareness about toxic aerial spraying—popularly known as "chemtrails". However, scientists prefer the term "persistent contrails" to describe the phenomenon, to move the inquiry away from amateur conspiracy theories.

Aerospace engineer Dr Coen Vermeeren, of Delft University of Technology, presented the Belfort Group—commissioned 300-page scientific report entitled "Case Orange – Contrail Science: Its Impact on Climate and Weather Manipulation Programs Conducted by the United States and its Allies". He stated clearly: "Weather manipulation through contrail formation...is in place and fully operational." Vermeeren mentioned a 1991 patent now held by Raytheon, a private defence contractor, with "18 claims to reduce global warming through stratospheric seeding with aluminum oxide...thorium oxide...and refractory Welsbach material". Authors of the study expressed concern that Raytheon makes daily flights spraying these materials in our skies, with minimal government oversight. Raytheon is the same company that holds the HAARP contract with the US government.

Other countries are also experimenting. The Chinese government announced in April 2007 the creation of the

first-ever artificial snowfall over the city of Nagqu in Tibet. China now conducts more cloud-seeding projects than any other nation.

10. Real Unemployment: One Out of Five in USA

The corporate media want America to feel secure during a time of unemployment crisis, but people deserve to know what is really happening. The latest unemployment rate released by the US Bureau of Labor Statistics dropped in January from 9.4 per cent to 9.0 per cent, giving the illusion that the US economy is recovering. This false unemployment decrease is partly explained by a "seasonal adjustment", where many people find temporary jobs during the holidays and therefore are factored into the employment rate but don't have job security. Also, after people have been unemployed for a year, the government no longer includes them in the statistics, even though they're still unemployed.

According to Shadowstats.com, the real unemployment rate is 22.2 per cent, which is more than double that claimed by the corporate media. It seems that the government is keeping people in the dark about the real unemployment rate to make people believe that the economy is improving, so that the government is praised for its success in lowering unemployment.

11. Trafficking of Iraqi Women

Human trafficking occurs throughout the world, yet has become increasingly more prevalent due to the instability produced by the Iraq War. Many Iraqi women and girls are widowed or orphaned by wartime casualties. Currently, more than

50,000 Iraqi women have fled to Jordan and Syria and are trapped in sexual servitude with no possibility of escape. Unable to support themselves or their households due to new government restrictions, thousands of Iraqi women have been preyed upon by sex traffickers who are taking advantage of this chaotic environment.

In June 2010, the US State Department released its annual *Trafficking in Persons Report*, which laid out a picture of human trafficking across the globe and reaffirmed the US commitment to ending this scourge. These trafficked women have received scant attention from American policymakers, who have the power to alleviate these women's suffering and condemn the countries that allow it to flourish.

The only conspiracy surrounding geo-engineering is that most governments and industry refuse to admit publicly what anyone can see in the sky or discover in peer-reviewed research.

The US holds the solution: it can make trafficked Iraqi women a priority resettlement group and put greater pressure on the United Nations High Commissioner for Refugees (UNHCR) to follow suit. Doing this would finally provide Iraqi victims of trafficking with a resettlement option that is fast and effective enough to actually help them.

12. Pacific Garbage Dump of Discarded Plastic

There is a swirling mass of plastic in the middle of the Pacific Ocean that qualifies as the planet's largest garbage dump. Much of the world's trash has accumulated in part of the Pacific Ocean (roughly 135°W to 155°W and 35°N to 42°N), based on the movement of ocean currents. The 5 Gyres Project estimates that there are 315 billion pounds of plastic in the ocean right now.

Not all plastic in the recycling bin gets recycled, and people carelessly toss plastics away. Plastic litter often ends up in waterways, and currents carry it out into the ocean. These pieces of plastic have a dire effect on marine life. Turtles confuse plastic bags for jellyfish, and birds confuse bottle caps for food. They ingest them but can't digest them, so their stomachs fill with plastic and they starve to death.

At the moment there is no easy way to clean up this major trash accumulation. However, we can stop it from getting worse by following the Ocean Conservancy's list of 10 things you can do, including living by the concept of less is more: don't buy stuff you don't need, and choose items that use less packaging. Other actions are at <http://www.oceanconservancy.org>.

13. State of Emergency to Supersede Constitution?

A program dating back to the Eisenhower era, of emergency measures for an America devastated in a nuclear attack, has now been converted to bestow secret powers on the President for anything he considers to be an emergency.

The National Emergency Centers Establishment Act (HR 645), introduced into Congress in January 2009, calls for the establishment of "national emergency centers" in major regions in the USA. The stated purpose of these centres is to provide "temporary housing, medical, and humanitarian assistance to individuals and families dislocated due to an emergency, major disaster" or to "meet other appropriate needs" determined by the Secretary of Homeland Security.

Recent "Continuity of Government" planning has quietly removed time-honoured constitutional protections and increased the militarisation of civilian law enforcement.

For the first time in US history, military troops (vs local law enforcement) are allowed to do police actions in US cities. Historically this has been illegal according to longstanding Posse Comitatus statutes.

There is good reason for the constructive friction between existing law enforcement agencies so that power is distributed in a democracy, and local law enforcement is responsible to local citizens. It should concern us all that there has been a loss of local authority and that there are sustained preparations for the possibility of martial law.

14. Genital Mutilation Continues in Kenya

Girls as young as nine years old were threatened with death if they tried to escape Kamunera, in the Mount Elgon district of Kenya, where they awaited female genital mutilation. In December 2010, over 100 girls in this region were targeted for circumcision but were rescued by Maendeleo Ya Wanawake Organisation officials.

Parents and grandparents in this area tell the girls that they will never get married and that no man will want them if they don't have the procedure. Not many girls are left to pursue education beyond the standard age of eight years old.

They are told that education is not meant for girls because they are supposed to get married and take care of their

husbands. Uncircumcised women generally are looked down upon and discriminated against for not having the genital mutilation procedure. Because of this, girls agree to go through with the surgery so they can be included in the rites of passage and be accepted by their community.

15. Big Polluters Freed from Environmental Oversight

The Obama administration has distributed billions of dollars in stimulus money to some of the nation's biggest polluters and has granted exemptions from basic environmental errors. The administration's main goal, in Secretary of Energy Dr Steven Chu's words, is to "get the money out and spent as quickly as possible". It is trying to boost the economy and create more jobs for the unemployed.

The administration has awarded more than 179,000 "categorical exclusions" to stimulus projects funded by federal agencies, freeing those projects from review under the National Environmental Policy Act (NEPA). Coal-burning utilities like Westar Energy and Duke Energy, chemical manufacturer DuPont and ethanol maker Didion Milling are among the firms with histories of serious environmental violations that have won blanket NEPA exemptions.

For the first time in US history, military troops (vs local law enforcement) are allowed to do police actions in US cities.

Even a project at a Texas City, Texas, refinery owned by BP (which has the oil industry's worst safety record), and the site of a deadly 2005 explosion as well as a benzene leak in early 2010, secured a waiver for the preliminary phase of a carbon capture and sequestration experiment involving two companies with past compliance problems. The so-called "stimulus" funding came from the \$787 billion legislation officially known as the American Recovery and Reinvestment Act, passed in February 2009.

Documents obtained by the Center for Public Integrity show that the administration has devised a speedy review process that relies on voluntary disclosures by companies to determine whether stimulus projects pose environmental harm. Corporate polluters often omitted mention of health, safety and environmental violations in their applications. Administration officials told the Center that they chose to ignore companies' environmental compliance records in making grant decisions and issuing NEPA exemptions, saying that they considered such information irrelevant.

16. Apple Workers Suffer

Apple's suppliers in China, such as Foxconn, Dafu and Lian Jian Technology, routinely violate China's law on the Prevention and Control of Occupational Diseases. Several manufacturers have replaced alcohol with n-hexane, which is used to clean parts. It is a chemical that works better than alcohol, but poisons workers. In these factories, the workers, often women in their teens or 20s, were forced to work with the poison in unventilated rooms.

Due to the chemical used at Lian Jian Technology's plant, 49 employees fell ill and were admitted to Suzhou No. 5 People's Hospital. More employees were likely poisoned, but many were pushed out before they fell ill and Lian Jian forced them to sign papers saying that they would not hold the company accountable. They left with 80,000–90,000 yuan (\$12,000–\$14,000), which they received in exchange for their lives and health and is meant to cover fees and medical costs that they would have to pay for the rest of their lives.

Apple stands alone, even among other IT companies which routinely cause problems of heavy metal pollution, in its evasiveness and refusal to work with green groups.

17. Resistant Superbugs are Spreading Worldwide

Lethal superbugs are emerging that do not respond to any known drugs. The World Health Organization states that the New Delhi superbug, also known as NDM-1, was

recently found in UK patients who had medical treatment in India and has now reached a critical point. These superbugs are resistant to carbapenem antibiotics, which is a major concern to experts because these are used for hard-to-treat infections that evade other drugs.

Already, over 25,000 people in Europe die each year from superbug infections, with many bacteria now resistant to all drugs. That figure will increase unless new, more powerful antibiotics are developed.

These bacteria, which have genetic resistance to antibiotics, have contaminated Delhi's drinking water supply. This gene spread into bacteria that cause dysentery and cholera, which can be easily passed from person to person via sewage-contaminated water.

Scientists are calling for urgent action by health authorities worldwide to tackle the new strains and prevent their global spread.

Apple's suppliers in China...routinely violate China's law on the Prevention and Control of Occupational Diseases.

The overuse and misuse of antibiotics is at unprecedented levels, and a lack of development of new drugs means that we could see current treatments become useless. The problem is made worse by drug companies that put off developing new antibiotics because they are seen as not profitable enough.

18. Monsanto Targets Haiti

In May 2010, several months after the 12 January earthquake that destroyed much of Haiti, the US multinational Monsanto donated 60 tons of corn and vegetable hybrid seed to the country. The US International Development Agency (USAID) took charge of the distribution.

On 4 June 2010, around 10,000 Haitian farmers demonstrated against Monsanto's donation. "If Monsanto's seed enters Haiti, farmers' seed will disappear," said Doudou Pierre Festil, member of the Peasant Movement of Papaye and coordinator of the National Haitian Network for Food Sovereignty and Food Security.

Haitian farmers denounce Monsanto because it requires them to buy new seed for every sowing season. Moreover, the organisation Farmers' Route has warned that the entry of Monsanto's seeds could force the farmers to depend on the company, which also produces the fertilisers and herbicides designed to be used with the seeds.

"The Haitian government is using the earthquake to sell the country to multinationals," declared Chavannes Jean-Baptiste, coordinator of the Peasant Movement of Papaye.

Monsanto is the world's biggest seed company, controlling 20 per cent of the seed market and 90 per cent of agricultural biotechnology patents.

19. How Aid is Used for Political Purposes

According to its February 2010 report, Oxfam has found that billions of dollars in international aid, which could have transformed the lives of many people in some of the world's poorest countries, was spent on unsustainable, expensive and dangerous aid projects which international donor governments used to support their own short-term foreign policy and security objectives. This type of aid often bypasses the poorest people and dangerously distorts the line between civilian and military activity.

The Oxfam report also showed that even though aid flows were raised while they met wealthy donors' international aid commitments between 2001 and 2008, more than 40 per cent of this aid increase was spent in just two countries, Afghanistan and Iraq, with the remainder shared among 150 other poor countries.

The report stated that, in 2010, 225 aid workers were killed, injured or kidnapped in violent attacks, compared to 85 in 2002. The politicisation and militarisation of aid in some places has made it much harder for aid agencies to provide help to those in need.

This is especially the case in Somalia, where the US humanitarian assistance for the country's desperate populations, previously the single largest source of aid, dropped eightfold in 2008–2010 due to the US government's listing some armed groups in control of most of central southern Somalia as "terrorist" under US law and ending funding if aid groups could not guarantee that no aid would reach the proscribed groups.

20. US to Outlaw GM Labelling

There is increasing concern over the health impact of growing and eating genetically modified organisms (GMOs). The World Health Organization has identified allergenicity, antibiotic resistance, gene transfer, outcrossing, GM genes introduced into wild populations, gene stability, susceptibility of non-target organisms (insects) and loss of biodiversity as potential issues in using GM seeds.

Currently, most health studies are done by GM companies which have a natural conflict of interest that can lead to biased research or reporting. Many countries, such as Japan, Australia, China and the European Union, recognise the possible risks and

require mandatory labelling for products made with GMOs. There is a growing call for more comprehensive, independent research.

However, the official position of the US Food and Drug Administration (FDA) and the Department of Agriculture (USDA) is that there is no difference between GMOs and non-GMOs. These agencies have proposed to the Codex Alimentarius Committee that no country should be able to require mandatory GMO labelling of food items. The FDA and USDA say that mandatory labelling is "false, misleading, and deceptive" because it implies that there is a difference between GMO and non-GMO ingredients. Ultimately, the FDA and USDA want to do away with

product labelling standards overall, trusting corporations to keep to the necessary health standards.

21. Lyme Disease: An Emerging Epidemic

The epidemic of Lyme disease is one of the most political and controversial epidemics of our time. Lyme disease originates from a bacterium transmitted through the bite of a tick and can remain hidden, mimicking diseases such as multiple sclerosis, ALS, ADHD and other neurological conditions. New cases of Lyme disease occur each year at a rate 10 times higher than that of AIDS and the West Nile virus combined.

Current Lyme disease treatment guidelines were developed by the Infectious Diseases Society of America (IDSA), a group associated with pharmaceutical, insurance and university interests that are profiting from the diagnostic criteria, vaccines and

recommended treatments for Lyme disease. These guidelines, endorsed by the National Institutes of Health and the Centers for Disease Control, define the treatment of Lyme as a two-to-four-week course of antibiotic therapy.

Physicians who believe that Lyme disease is a more chronic condition needing long-term treatment risk losing their medical licence for treating patients outside IDSA guidelines. Insurance companies refuse to pay for longer treatments despite evidence that illustrates the chronic nature of the condition and the effectiveness of long-term therapies. This leaves thousands of Lyme disease patients suffering because a commercialised medical community won't acknowledge the chronic nature of their illness, and the public uneducated about a growing epidemic.

The FDA and USDA say that mandatory labelling is "false, misleading, and deceptive" because it implies that there is a difference between GMO and non-GMO ingredients.

22. Participatory Budgeting: Empowering Citizens

Participatory Budgeting (PB) is a process that allows citizens to decide directly how to allocate all or part of a public budget, typically through a series of meetings, work by community "delegates" or representatives and ultimately a final vote. It was first implemented in the city of Porto Alegre, Brazil, in 1990, and has since spread.

PB has recently taken root in Canadian and American soils. Chicago's 49th Ward, for example, uses this process to distribute \$1.3 million of annual discretionary funds. The ward's residents have praised the opportunity to make meaningful decisions, take ownership over the budget process and win concrete improvements for their neighbourhood, e.g., community gardens, sidewalk repairs, street lights and public murals. The initiative proved so popular that the ward's alderman, Joe Moore, credits PB with helping to reverse his political fortunes. The wave is not stopping in Chicago, either. Elected officials and community leaders elsewhere, such as in New York and San Francisco, are considering launching similar initiatives.

23. Movement to Ban Plastic Bags

Shoppers worldwide are using 500 billion to one trillion single-use plastic bags per year. The average use-time of a plastic bag is 12 minutes. Plastic bags pollute our waters, smother wetlands and entangle and kill animals. This eventually affects our health because larger animals eat small plastic-laden creatures, and plastics work their way up the food chain until we consume animals that have eaten some form of plastic. Plastic is non-biodegradable and is made from a non-renewable resource: oil. An estimated three million barrels of oil are needed to produce the 19 billion plastic bags used annually in California.

Now 35 countries have already banned the use of plastic bags, nine countries have passed levies and fees on their use, 12 countries are considering bans or fees, and 26 states in the USA have introduced a form of legislation concerning plastic bag use.

Most plastic contains harmful chemicals like bisphenol A and phthalates, which are unsafe for human use. These can be avoided by substituting plastic materials and products with other alternative materials like reusable cloth bags, stainless-steel water bottles and wooden, glass and metal substitutes.

24. South Dakota: The Top Anti-Abortion State

South Dakota is taking extreme action against any person who performs an abortion within the state's borders. The South Dakota House is taking up a bill to redefine "justifiable homicide" that may "make it legal to kill doctors who perform abortions", *Mother Jones* reports. The bill, which is backed by the GOP in theory, could allow a woman's father, mother, son, daughter or husband to kill anyone who tried to provide that woman with an abortion, even if she wanted the procedure.

In 1994, the state banned abortion providers inside its borders. "Planned Parenthood flies a doctor in from out-of-state once a week to see patients at a Sioux Falls clinic. Women from the more remote parts of the large, rural state drive up to six hours to reach this lone clinic" and must "receive counseling and wait 24 hours before undergoing the procedure".

GOP (Republican) lawmakers at the state and federal level have come up with four other radical abortion restrictions to marginalise women's rights and eradicate choice. Through such inflexible attachment to pro-life policies, the GOP subordinates the choices and lives of women to a narrow-minded and impracticable philosophy.

GOP state lawmakers in Arizona and Ohio have unveiled so-called "Heartbeat Bills" to "prohibit women from ending pregnancies at the first detectable fetal heartbeat". The heartbeat can be heard "within 18 to 24 days of conception" and "in almost all cases by six weeks"—a period in which "many women don't even know they're pregnant".

Texas Governor Rick Perry (R) "fast-tracked" an anti-abortion bill, mandating that "pregnant women be shown an ultrasound of the fetus at least two hours before an abortion". Physicians would have to show the foetus's dimensions, limbs or internal organs, and, if audible, the foetal heartbeat.

Arizona GOP Rep. Steve Montenegro actually introduced bills to criminalise abortions if they're sought because of race or sex. The bill would charge doctors with a Class 3 felony if they "knowingly perform abortions for these reasons".

On the federal level, House Republicans took the first two months of 2011 to marginalise the rights of women. First, they tried to exclude certain victims—including women who are drugged, women who do not physically

GOP (Republican) lawmakers at the state and federal level have come up with four other radical abortion restrictions to marginalise women's rights and eradicate choice.

HUMAN MILK

THE TRUE WHITE GOLD

Not only does human breastmilk provide essential nourishment for the infant, but the skin-to-skin contact of breastfeeding imparts a psychological benefit in helping the child develop to full potential.

Gold, particularly white gold, has historically held, and continues to hold, special significance for those committed to spiritual growth. However, the deepest truth is that it is human milk which is the most sublimating substance on the planet, as it completes the act of creation begun *in utero* and affords the individual the best chance of obtaining physical and psychological optimisation. As such, it is the white gold of the alchemist. It is intriguing that the ancient alchemical symbol for gold, the circumpunct, is a circle with a dot in the centre—a very elegant representation of a breast!

Milk is a substance that we tend to take for granted. It is a food staple enjoyed in both savoury as well as sweet forms. Yet humans are the only mammals that continue to enjoy what milk has to offer past the weaning stage—and by drinking the milk of other mammals. Why is that so? Apart from the fact that dairy foods constitute a nutritious and convenient food choice, the answer most probably lies in the fact that humans are unique among the primates in that we tend not to lactate for the standard span of six times the gestation period, i.e., in our case, 54 months. In doing so, humans seemingly display more reptilian traits when it comes to reproduction. So we then go through life playing catch-up, craving what we lacked as an infant because milk provides inner nourishment on both physical and psychological levels.

Milk is a mythical symbol of immortality that may be found in different cultural and literary traditions, including those of the Celts, Christians, Greeks, Hindus and Muslims. The Israelites searched for the Land of Milk and Honey, while Mohammed is reputed to have said that "to dream of milk is to dream of learning and knowledge". The Hindu myth on achieving immortality describes how, for 1,000 years, the Devas and Asuras churned the Ocean of Milk until the prize elixir (*amrita*) surfaced. After a struggle, it was the Devas who prevailed and, after drinking it, they obtained immortality and ruled the cosmos, thereby consigning the Asuras to rule over the bowels of the Earth and the depths of the ocean. The offspring of Zeus all needed to be suckled by Hera in order to obtain immortality. It is said that when Hera was disturbed when Zeus plotted to have her inadvertently suckle Hercules during her sleep, her let-down sprayed across the firmament, giving rise to the Milky Way—our galaxy of stars. The Greek word for milk is *gala*, and so this legend and our love affair with milk take on added meaning with the popularisation of the notion by Dr Carl Sagan that we are all "the stuff of stars"!

In dream symbology, milk signifies success or the gaining of spiritual knowledge. Actually, to dream of milk is understood to be a very positive message from one's unconscious mind. While it may suggest a need for deep and fundamental nourishment, the inference is that it is available. In particular, a dream of breast-feeding may be about nourishing the needy inner child. However, it may also be about offering spiritual inspiration to

others. In this regard, we need to acknowledge that the breasts sit over the heart chakra, and that human milk is rich in oxytocin—the hormone of love! On the other hand, to dream of asking for or drinking milk suggests a need for spiritual sustenance; and this is, perhaps, what underpins our continuing love affair with milk.

We spend our lives trying to return to the breast, which tends not to be offered for very long in the developed world as women struggle with what I call the Curse of Eve: the catch-22 situation that perpetuates in developed cultures as women struggle to balance what they give to their offspring against what they give to themselves.

Uniqueness of Species-Specific Milk

Mammals are primed to nourish their offspring *ex utero* with a substance that is designed in a species-specific way to complete the cycle of growth and development that was initially governed by the placenta.

This is how female mammals play a unique and unequivocal role in providing for the next generation. Perusal of the chart (figure 1) shows us at a glance that each mammal's milk is unique unto itself within the broader confines of being a substance that contains water, amino acids (protein), carbohydrate (lactose), fat and minerals (ash).

This situation of species specificity is Nature's way of ensuring that each mammal is initially nourished with a substance that uniquely gives it an optimum start in life. For instance, seal's milk is very high in protein and fat; this is to ensure that the calf grows quickly and is able to put down fat to protect it against its hostile environment as well as to be able to sustain itself for days at a time while the mother goes off to feed herself. Kangaroo milk is low in solids and has a very high water content, which is consistent with what's needed for survival in the harsh, dry conditions of the animal's habitat. Human milk, on the other hand, is low in protein (we grow slowly) and high in lactose, as lactose is a prime promoter of brain growth.

Although it is the milk of the ass which has the closest correspondence to human milk, there is, naturally, good correspondence between the profiles of human, baboon, monkey and orang-utan milks as all are from primates. A distinguishing feature of primate milk is the high lactose, as it is this component of milk that optimises brain growth and promotes higher-order cognitive functioning. Except for humans living in developed cultures, the general rule among primates is that they lactate for six times the gestation rate. In indigenous cultures, females tend to feed their infants for many years, and may even kill a newborn if they inadvertently reproduce again while they are still lactating.³ Harsh as this may seem, it is a definitive statement regarding the crucial role that human milk plays in sustaining an infant. When there is no way a mother can reach for a tin of formula, her options are limited.

In fact, UNICEF tells us that 1.4 million babies die each year due to lack of breastmilk.⁴ In situations where mothers think that they are choosing the sophisticated or "scientific" option, the realities of lack of clean water, poor sanitation and insufficient funds to buy formula and pay for heating soon hit home and babies die of malnutrition or infection.

This is a shame, as the milk of a mother in a personally deprived situation differs but little from that of her more well-fed sister. Milk is a universal substance with much consistency with respect to all constituents across all races and geographical areas; and while diet may affect levels of fat and some vitamins and minerals, it does not affect the whey component (which is 60 per cent of the protein in mature human milk, and 90 per

cent of colostrum). This contains a wealth of components which are never listed on the side of a tin of formula, which is usually based on bovine protein with a whey component of just 20 per cent and on a profile designed to optimise the development of the bovine species, not the human.

Apart from a comprehensive array of vitamins, minerals (including trace elements) and fatty acids (of which the short-chain ones promote gut closure and therefore help protect against allergies and *Giardia*, and the long-chain ones optimise central nervous system development), human milk is unique in that it also contains:⁵

- a range of antioxidants;
- two specialist proteins (α 1-antitrypsin and α 2-macroglobulin protein) which offer protection against influenza, parainfluenza and rotavirus;
- its very own bifidus factor which enhances proliferation of lactobacilli, thereby inhibiting some *E. coli* and Enterobacteriaceae including *Shigella* and *Salmonella*;
- bile salt-stimulated lipase which generates fatty acids and monoglycerides that inactivate *Giardia lamblia*, *Entamoeba histolytica* and *Trichomonas vaginalis*;
- complement which protects against *E. coli*;
- a range of cytokines which initiate and stimulate host defence, prevent auto-immunity, have anti-inflammatory effects on the upper respiratory and gastrointestinal tracts, and stimulate development of the digestive system;
- 20 different enzymes which perform various functions including biosynthesis and preservation of milk components in the mammary gland, and also have a transport and anti-infective role, thereby promoting

Milk is a universal substance with much consistency with respect to all constituents across all races and geographical areas; and while diet may affect levels of fat and some vitamins and minerals, it does not affect the whey component...

digestive function in the neonate;

- epidermal growth factor which promotes increased growth and maturation of the foetal pulmonary epithelium, stimulates ornithine decarboxylase activity and DNA synthesis in the digestive tract, and accelerates the healing of wounds (including the repair of abraded nipples);
- gangliosides which are thought to help protect the neonate from toxin-induced diarrhoea, especially from *E. coli* and *V. cholerae*;
- immunoglobulins of which more than 30 have been identified: 18 are from maternal serum, and the rest are found exclusively in the milk; sIgA, which is found in levels five times that of maternal serum, is the most

important of these (immunoglobulins protect mucosa and have bacterial and viral neutralising capacity; sIgA is known to protect against enteroviruses [poliovirus types 1, 2, 3; Coxsackievirus types A9, B3, B5; Echovirus types 6 and 9], herpes virus [*Cytomegalovirus*; *Herpes simplex*], Semliki Forest virus, respiratory syncytial virus, rubella, reovirus type 3 and rotavirus; IgM and IgG protect against respiratory syncytial virus and rubella);

- a range of hormones that perform a variety of functions;

- interferon which also has antiviral activity;

- interleukins which are a sub-group of cytokines which augment the newborn's immune system by

increasing antibody production (especially of IgA), enhancing phagocytosis, activating T cells and increasing α 1-antitrypsin production by mononuclear phagocytes;

- lactoferrin which binds iron and therefore inhibits host-pathogen interactions;

- lactoperoxidase which destroys streptococci and enteric bacteria;

- lymphocytes of which human milk contains both the T (thymus) and B (bursa) types; these lymphocytes transfer long-lasting maternal antibodies to the infant and synthesise sIgA antibodies in the breast;

- lysozyme which lyses bacteria through destruction of the cell wall; it is found in large quantities in the stools of breastfed babies and is thought, therefore, to affect gut flora;

- macrophages which synthesise complement, lactoferrin and lysozyme and perform a variety of other

functions including phagocytosis of fungi and bacteria;

- nucleotides which constitute 15–20 per cent of the non-protein nitrogen in human milk; they are thought to influence the immune system, iron absorption, intestinal flora, plasma lipoproteins and growth of intestinal and hepatic cells;

- oligosaccharides of which more than 80 have been identified; they inhibit the binding of enteropathogens to their host receptors.

Additionally, some of the most recent research on human milk is looking at a range of factors involved in its role as a protector against obesity in later life.⁶ Focus is also being given to the dynamic interaction between mother and infant, whereby she provides antibodies through her milk when her infant is suffering from any current bacterial or viral assault. A range of stem cells in human milk has a role to play in this, and

their discovery is very exciting.

There can therefore be no denying the facts of the matter; this is an impressive and comprehensive profile, affording the developing infant the full spectrum of what Mother Earth has to offer.

In sustaining us, human milk allows us to incarnate fully, to become entrained with the planet's vibration. To have "harmonic resonance" promotes the best of health, according to Captain Bruce Cathie.⁷ To have the best of health frees us to focus on the "higher purpose of our existence", according to Dr Samuel Hahnemann.⁸ And so it is human milk, accessed throughout the baby and toddler years, that best provides us with a framework for pursuing these options.

In sustaining us, human milk allows us to incarnate fully, to become entrained with the planet's vibration. To have "harmonic resonance" promotes the best of health, according to Captain Bruce Cathie.

Disadvantages of Substitutes

There is morbidity associated with not receiving species-specific milk. Furthermore, when assessing the role that human milk plays in optimising physical maturation, consideration also needs to be given to the range of known disadvantages that beset the infant raised on a breast milk substitute. Not only does he miss out on all the unique benefits listed above, but his gut flora are different from those of his breastfed friend and he may have to deal with:

- too much aluminium;
- too much manganese;
- too much lead;
- too much cadmium;
- too much iron;
- transgenic soy and yeast;
- traces of algae and fungi used

to manufacture the long-chain polyunsaturated fatty acids found in tins of "gold standard" formula selected by well-meaning

mothers who want what's best for their infants;

- hexane used to produce the above;

- *Enterobacter sakazakii* (found in up to 14 per cent of tins of formula, which is the reason why maternity wards stock only ready-made formulas; tins are banned from hospitals because of this bacterium).

Added to this is the fact that the lipids in formula are included according to availability and price. Perusal of a range of tins of formula will identify a variety of lipid sources, including coconut, corn, "marine oils" (i.e., genetically engineered from algae), palm olein, soy lecithin and vegetable (probably safflower). Interestingly, research published in 2003⁹ suggests that healthy, full-term infants fed a formula containing palm oil as the predominant oil in the fat blend have significantly lower bone mineral content and bone mineral density than those fed formula without palm oil

(specifically safflower, coconut and soy). Therefore, the inclusion of palm oil in infant formula at levels needed to provide a fatty acid profile similar to that of human milk leads to (apart from deforestation in some parts of Asia) lower bone mineralisation, as it has been shown to lower calcium and fat absorption.

Calcium absorption is also problematic due to the fact that cow's milk has a calcium to phosphorus ratio of 1:3, whereas the calcium to phosphorus ratio in human milk is 1:1, thereby making the calcium easily absorbable. This ratio of 1:3 binds the calcium to the phosphorus for excretion. While cow's milk is touted as a "good source of calcium", this ratio makes it not easily bio-available. The best absorbable sources of calcium are nuts and seeds, the bones of oily fish and green leafy vegetables. Cows get all their calcium from grass!

However, further on the subject of lipids, it is their role in potentiating central nervous system development that best defines their role in milk, and it's a well-established fact that breastfeeding increases intelligence. Although this comes about largely due to the high amount of lactose in human milk, it is also due to the long-chain polyunsaturated fatty acids (PUFAs) which abound in human milk when mothers simply include plenty of seafoods in their diet or consume flaxseed or hempseed oils. As early as 1929, enhanced learning ability and higher IQ scores at 7–13 years of age were described in children exclusively breastfed for four to nine months.¹⁰ However, since that time, definitive data to reinforce this understanding regarding human milk and cognitive function have been provided by research which suggests that breastmilk, generally, has a significant impact on the development of the central nervous system. Premature infants who were provided breastmilk by nasogastric tube have been compared to those of similar gestational age and birth weight who were nourished by formula. Results showed that the breastmilk-fed infants were more advanced developmentally at 18 months and that this advantage continued through to eight years of age.¹¹

Similar positive results are associated with babies born full term and breastfed,¹² and these are reinforced by the findings of an 18-year longitudinal study of 1,000 New Zealand children which demonstrated that breastfeeding for eight months or longer imparts an increase in cognitive and educational achievement. A range of measures, including standardised tests, teacher ratings and academic outcomes in high school and young adulthood, confirmed these effects.¹³ These results back up a similarly large study of 13,135 children

conducted previously in the British Isles, which found a positive correlation between the duration of breastfeeding and performance in tests of vocabulary and visuomotor coordination.¹⁴ Other studies have further supported the notion that visual acuity is enhanced by breastfeeding.^{15, 16, 17, 18}

Humans are the only mammals on the planet who habitually drink the milk of another species, and there is no research to support the notion that other milks provide the same positive effects as human milk and much to suggest otherwise. Apart from problems already mentioned, a multitude of health issues ensue when non-human milks are the staple diet of the infant. For example, it is understood in veterinary circles that feeding non-species-specific milk to an animal causes apnoeic episodes. This is what happens to the formula-fed infant. He's simply not able to breathe easily during

feeding because of aggravation from the non-species-specific protein fragments in the formula. Research has recorded that there are different suck/swallow patterns between bottle-fed and breastfed infants, and further has established that suckling at the breast optimises orofacial development resulting in benefits with respect to teeth spacing and speech development.

Additional points of consideration here are that infants who are weaned early and raised on a breastmilk substitute are at an increased risk in the long term of:¹⁹

- obesity (artificially fed infants consume 30,000 more calories than breastfed babies in the first eight months; the obesity issue, however, is complicated by the fact that research conducted in the 1970s demonstrated that the DPT vaccination interferes with insulin metabolism);

- Crohn's disease;
- ulcerative colitis;
- coeliac disease;
- cardiovascular disease;
- type 2 diabetes.

In the short term, there is an increased risk of sudden infant death syndrome (SIDS) as well as:

- necrotising enterocolitis (NEC) and late-onset sepsis in pre-term infants;
- bacterial meningitis in pre-term infants in neonatal intensive care units (homœopaths recognise that it's the tubercular miasm infants who have bleeding into the brain when they're given "human milk fortifier", i.e., cow's milk formula);
- botulism;
- diarrhoea;
- upper respiratory tract infections and otitis media;
- urinary tract infections.

...infants who are weaned early and raised on a breastmilk substitute are at an increased risk in the long term...

Added to these is an increased risk of type 1 diabetes because the majority of breastmilk substitutes are based on cow's milk, and research has long established a link between cow's milk consumption and type 1 diabetes.

Psychological Benefits Associated with Human Milk

The other aspect of this discussion, however, must concern itself with the psychological benefits that also occur when babies enjoy such an extended time with their mothers. It was Dr Niles Newton in the 1970s who was the first to suggest (in the lactation literature) that breastfeeding imparts a psychological benefit to the neonate. She noted that such children develop into more "mature, secure and assertive" individuals.²⁰

This is consistent with earlier observations made by Erik Erikson who, as a psychologist, identified two distinct stages in a child's development.²¹ Stage 1 lasts from birth to 18 months and is labelled *Trust vs Mistrust*. During this developmental stage, the infant who has his needs met and feels physically safe grows in confidence and comes to trust his environment. As he begins to become ambulatory, he then comes and goes from his mother with confidence and a sense of being in charge, which helps to minimise separation anxiety. Those toddlers who come to trust their environment in this way then move easily into the next stage.

Erikson described Stage 2 as lasting from 18 months to three years, and he labelled it *Autonomy vs Shame*. During this second stage, the breastfed toddler further grows in reassurance and confidence as he begins to explore his exciting new world with his newly acquired motor and verbal skills. Breastfeeding during this stage

is as much for emotional as well as nutritional needs, as the toddler's process of individuation gradually unfolds and he grows in the realisation that he is a separate individual who has control over his environment. These stages, during which the toddler grows into the mental capability to recognise that objects have permanency when out of sight (and therefore to accept the notion of separateness), have also been defined by Piaget and labelled Object Constancy.²²

Perusal of figure 2 makes these stages easier to grasp. To my mind, Erik Erikson has elegantly defined man's journey with these eight stages, each governed by a positive or a negative attribute. So, a normal, drug-free physiologic birth, after which an infant is given the

space to search for the nipple himself, offers the newborn a valuable first lesson: if I struggle, I will survive. Then, if he has access to his mother's breastmilk throughout the next four years, he has the best chance, early on in his development, of becoming an autonomous and a trusting individual, and this sets the pattern for life and holds out the reward of self-actualisation.

However, more recently, other pertinent observations regarding the psychological importance of the mother/baby dyad have been made by a group of Swedish researchers²³ and followed up by Nils Bergman, MD, who has named this unit a "single bio-sociological organism".²⁴ As a researcher, Dr Bergman has done much to promote the concept of the "kangaroo mother-care" phenomenon, in which mother-infant skin-to-skin contact is the natural "habitat" for all newborn babies and is the one that best promotes both psychological and physiological development. Bergman argues that removal from this habitat, which promotes

...the infant who has his needs met and feels physically safe grows in confidence and comes to trust his environment.

Figure 2

ERIK ERIKSON'S EIGHT EPIGENETIC STAGES OF MAN

VIII Maturity/Old Age: (WISDOM)	Ego Integrity vs Despair, Disgust
VII Middle Adulthood: (CARE)	Generativity vs Stagnation
VI Young Adulthood: (LOVE)	Intimacy vs Isolation
V Puberty and Adolescence: (FIDELITY)	Ego Identity vs Role Confusion

easy access to the breast, results in a protest–despair response, first so-named by Dr Jeffrey Alberts²⁵ but originally identified in orphans after World War II and subsequently studied in monkeys by Dr Harry Harlow.²⁶

The Solution

So, with all this to consider, that is why I offer to each mother in my care (as she weans) a means of preserving her milk by succussing it to a 7C homœopathic potency,²⁷ so that her baby can continue to have the advantages that her milk can offer while trying to cope with surviving in a less than optimal circumstance. Instructions on how to do this are available in *Milk Matters* at <http://www.patriciahatherly.com>. It is but a small thing with huge implications, as it allows mothers some freedom and peace of mind when, for whatever reason, breastfeeding her infant is just not possible, while ensuring that the baby is not totally compromised.

Meanwhile, we need to work towards the establishment of human milk banks so that mothers can make a meaningful choice about when they wean. To be able to reach for a tin of formula made from human milk would be a real bonus; not only would mothers be able to benefit from the freedom that this would offer, but babies would derive tangible life-long benefits from a developmental perspective. And the planet, also, would benefit, as breastmilk is an ecologically sound product that contributes but little to any environmental disturbance of Earth's ecosystems. Our atmosphere, soil, flora, fauna and waterways are less affected during human milk production when compared to the production of breastmilk substitutes. It is a totally renewable resource and, as such, breastfeeding is essentially a carbon-neutral activity.

Furthermore, apart from the physical and psychological advantages afforded the individual raised on human milk, there are real and tangible benefits that are afforded the economy when babies receive breastmilk for an extended period. Valuable natural resources are not wasted in production and distribution, and it helps to promote population control, child and family welfare as well as good health for both mother and baby. Lactating women worldwide produce (on average) half a litre of milk daily. As billions of litres are therefore produced annually throughout the world, breastmilk's contribution to the gross national product and balance of payments of all nations is considerable.^{28, 29, 30}

It therefore begs the question: if countries have the wherewithal to establish and maintain a network of blood and sperm banks, deeming them necessary for various health, economic and social reasons, why can't the same resources be available to establish and maintain human milk banks? The advantages to us as a species would be enormous. There is no substitute for the real thing. Human milk is the white gold that we seek. ∞

About the Author:

Patricia Hatherly, BADipEd, BHSc(Hom), is a registered classical homœopath and naturopath who has worked with mothers and babies for 35 years, 20 of them as an internationally certified lactation consultant. She is the author of numerous journal articles and two books, *The Homœopathic Physician's Guide to Lactation* (2004) and *The Lacs: a materia medica and repertory* (2010). For more information, visit her website <http://www.patriciahatherly.com>.

The Ringing Cedars - a stunning series of books from Russia

In 1994 a Siberian elder told the entrepreneur Vladimir Megré a fascinating story about the “ringing cedars” - trees respected from Biblical times for their curative powers and the capacity to reconnect human beings with the Divine. The elder told him where such a ringing cedar was growing in the Siberian backwoods. Vladimir Megré set out on an expedition to find the tree. But his encounter with the elder’s granddaughter, Anastasia transformed him so deeply that he abandoned his commercial plans and, penniless went to Moscow to write a book about what she shared with him.

What happened next thrilled and inspired millions with the series selling over 10 million copies in Russian alone. Translated into 20 languages, these highly unusual books provide extraordinary insights into dozens of subjects, from natural child rearing to the production of high-energy, healing foods, from natural child rearing to the amazing potential that awaits every one of us, extraterrestrial civilisations, from ancient megalithic science to the vital importance of breast feeding, and from sacred sexuality to the hidden history of world religions.

Historical Evidence for Pleomorphic Microbes

For nearly a century we had increasingly strong evidence for a common microbial cause of cancer and autoimmune diseases, but now we also have visual proof. A recently developed research microscope can show us in great detail what happens in the blood of individuals who develop these diseases. What it shows is that the key to understanding their cause and cure is the rise, or perhaps, better, the uprising, of an endogenous microbe in the blood.

The scientific community adopted the concept of *monomorphism*, based on the work of Louis Pasteur in the late 19th century. This concept means that microbes always maintain their basic shape as virus, bacterium or fungus. The term *pleomorphism*, on the other hand, as coined by the French chemist and biologist Antoine Béchamp, refers to the ability of microbes to change from one form into another, like a caterpillar changing into a butterfly.

While a causal correlation between cancer and microbes has been shown only in a few rare human or animal tumours, several independent researchers have reported the proliferation of certain microbes in all cancer patients.

One of the first researchers was the German professor of zoology and microbiology, Günther Enderlein, who in 1925 described the different stages of a microbe that is normally present in the blood as tiny colloidal protein units.

These protein units appear to originate from the natural breakdown of cellular components and may be essential for healthy blood. In degenerative diseases, especially cancer and autoimmune diseases but also chronic fatigue syndrome and fibromyalgia, these protein units grow into increasingly higher bacterial forms and finally into fungi. Conventionally, these forms are called *Enderlein structures* and are the basis of Live Blood Analysis as presently used in natural therapy.

Independently, mostly without knowing of each other's work, several other researchers—including Royal Raymond Rife, Wilhelm Reich, Virginia Livingston-Wheeler, Alan Cantwell and Gaston Naessens—have described the same phenomenon.

Orthodoxy, however, has a dogma which says that microbes always have the same form and cannot change from viruses into bacteria and fungi. This is because orthodox microbiologists commonly observe dead stained microbes in dead tissue or live ones for short periods, instead of live microbes in live tissue at very high magnification over long periods.

Of special interest are the experiments of Dr Livingston-Wheeler, who injected cultures of pleomorphic organisms into mice. When small amounts were injected, an autoimmune disease developed, but higher doses produced tumours or cancer. Accordingly, these cancer-forming microbes have often been called *cancer viruses* or *cancer microbes*.

Mycoplasmal Infections

The growth cycle of pleomorphic organisms includes a stage as cell-wall-deficient (CWD) microbes. These may arise endogenously, within our body, or arrive from the outside as *Mycoplasma* species. Orthodox microbiology does not recognise that CWD microbes can arise endogenously, but mycoplasmas have been known since 1898 as the smallest group of bacteria. The term "myco" indicates fungus-like properties, while "plasma" points to the soft shell without a cell wall. Mycoplasmas are actually living particles of bacterial nucleic acid and are regarded as being parasites in our body.

Mycoplasmas or their spores are so small that, like viruses, they go through bacterial filters and may contaminate blood used for transfusions. Often mycoplasmal infections remain symptomless until one suffers a traumatic event or when health deteriorates for some other reason. Because of the missing cell wall, mycoplasmas don't respond to most antibiotics. Commonly, mycoplasmal infections are associated with the presence of other pathogenic microbes and parasites.

Of special interest presently are the microbes associated with Lyme disease, which can originate naturally from a tick bite. The bacteria that cause Lyme disease, the spiral-shaped *Borrelia*, have been shown to exist in a bacterial as well as in a mycoplasmal form and as spores. They also can hide from the immune system by using markers of normal body cells.

Modern Lyme disease started in 1975 as an epidemic in the town of Lyme, Connecticut, close to a biological warfare research laboratory. US government scientists hold a patent on behalf of the US Army for the crystalline *Mycoplasma fermentans*. This semi-synthetic species appears to be much more dangerous than the natural variety (see Public Health Alert article at <http://tinyurl.com/n246xe>). *Mycoplasma fermentans* is an important agent in several modern diseases which suddenly appeared in epidemic form, such as AIDS, Lyme disease, Gulf War syndrome and Morgellons disease. Various mycoplasmal species are associated with pneumonia, bladder infections, endocrine dysfunctions, gastro-intestinal distress and other conditions. A key problem with mycoplasmas is their disruptive influence on cholesterol and other sterols, and even worse is the toxic effect of the *Borrelia* spirochaete on lipoproteins, thereby wrecking the metabolism of fat.

The microbes of Lyme disease may trigger hundreds of different symptoms and have now been shown to mimic most chronic diseases, especially chronic fatigue conditions, fibromyalgia and autoimmune diseases in general, but also mental conditions such as

schizophrenia, depression and Alzheimer's disease. Some of these, including Parkinson's disease, could be cured by eliminating the mycoplasmal infestation (see <http://tinyurl.com/233x9k>).

A Revolution in Microscopy

A revolutionary technique in optical microscopy, invented by German researcher Kurt Olbrich, has been developed by Grayfield Optical Inc. (see the website <http://www.grayfieldoptical.com>). It allows one to see detailed structures that are otherwise not even visible with conventional phase-contrast microscopy. Now it is possible to observe the decomposition of live blood or the pleomorphic changes from spores or viral forms to bacteria and fungi in diseased blood.

Previous researchers of pleomorphic processes were restricted to a magnification of about 2,000 times and a resolution of 200 nm, while the Olbrich Lens System allows magnifications of up to 30,000 times and

resolutions of less than 100 nm with great depth of focus in natural colours. Therefore, everything can now be seen in much greater detail and can even be filmed.

Orthodox microbiologists have used conventional analytical methods and theories to prove that the observed Enderlein structures are dead protein aggregates, but if they instead used the Olbrich system and filmed the development

and movement of these entities they would be unable to defend their dogma.

I recommend that you watch these videos at the Grayfield Optical website. The first video, at <http://tinyurl.com/6xqezfx>, shows the activity and development of pleomorphic microbes in the blood. A longer video, made earlier and of lesser quality but showing additional interesting facts, is at <http://tinyurl.com/6ykople>. Disregard the scientific details of the explanations, and especially the difficult-to-understand names of the various microbes and processes, and just focus on what you see.

For detailed drawings and descriptions of the development cycle of these pleomorphic microbes, see <http://tinyurl.com/3ehmxta>. In the head of these club-shaped microbes one can see new spores or viruses evolving; and when the whole structure reaches a certain size, the head explodes and releases a new batch of virus-sized particles into the blood. Immune cells or phagocytes gobble up these virus forms to destroy them, but if there are too many they just continue to develop inside the phagocytes into club-shaped forms. These eventually break out again, with large heads full of viruses that they release into the blood.

Mycoplasmas are actually living particles of bacterial nucleic acid and are regarded as being parasites in our body.

The Nature of Pleomorphic Microbes

These aforementioned videos show that healthy blood is clean with well-formed red blood cells, or *erythrocytes*. In addition, there is a faintly perceptible background structure of tiny globules, each with a single tail. During an acute infection, some of these globules grow much bigger and develop a second tail, but after the infection has cleared up they disappear into the background as tiny globules with single tails. If the body is generally more unhealthy or in a so-called precancerous condition, then these structures remain permanently visible as round or elongated club-shaped forms.

An interesting phenomenon is the movement of these globules in and out of erythrocytes. Pleomorphic microbes live mainly on our blood sugar. When it is high, they are mainly outside in the plasma; but with low blood sugar, they move back into the erythrocytes where they find more food. Then when the sugar level is high, they come back out again.

As the immune system continues to deteriorate, fungus-like forms with long threads develop and grow increasingly bigger. The rigid and flexible fibres shown in the pleomorphism videos remind me of the weird-looking specimens of Morgellons disease that I once viewed. In this disease, strange synthetic-looking fibres come out of the skin. This suggests to me that Morgellons may be the result of the crystalline *Mycoplasma* species developed by the US Army. The timeline shows that the Army's first patent application was in 1986, that there were several modifications, and that in 1993 the final patent was granted. It wasn't until 2002 that the term "Morgellons disease" was coined. Successful self-help methods for Morgellons, posted on the Internet, seem to be effective against mycoplasmas in general. It appears that the US Army started experimenting with mycoplasmas soon after the end of World War II, as suggested by several strange epidemics such as the Royal Free Epidemic of 1955 involving myalgic encephalitis, now more commonly called chronic fatigue syndrome or fibromyalgia.

Large fungal forms are present at the end stages of cancer and AIDS. It is recognised that frequently the cause of death is due to systemic fungal infestations, or *mycoses*. Conventional theory assumes that these are secondary to tumours or HIV, while the observed pleomorphic life cycle shows that these and their fungal

stages are the primary cause of why people die of cancer and probably of AIDS. The reason for the lethal effects of severe mycoses is likely a combination of poisoning of the energy-producing mitochondria inside cells by fungal toxins and the destruction of erythrocytes by pleomorphic microbes.

These "pleomorphs" not only fill the inside of red blood cells and deplete them of nutrients, but they also form spines and long protrusions in the cell wall when they move out into the plasma. Someone with myasthenia gravis, an autoimmune disease, once mentioned that he was shocked to see that most of his red blood cells looked like black sea-urchins. These erythrocytes can no longer supply nutrients to the body and are quickly destroyed in the spleen. This is the real

cause of severe anaemia that is so common in cases of advanced cancer and various other diseases.

In the end stages of cancer, nearly 100 per cent of erythrocytes are strongly infested and dysfunctional. This then leads to cachexia (muscle wasting with extreme fatigue) as the leading cause of death in cancer and AIDS sufferers. However, as shown in the longer video mentioned previously, with special Enderlein vaccines used even in advanced cancer the erythrocytes can be returned to health within one month with simultaneous shrinking of existing metastases.

You may wonder how it is possible for a single cause such as an overgrowth of pleomorphic microbes in the blood to lead to many different diseases. The answer is basically the same as why a cyclone can destroy one building and leave another one undamaged, or rips off the roof of one and causes water damage in another. When the immune

system is severely weakened, then any pathogens have free range and the weakest organ will be the first to crumble.

Orgone Experiments

The new observations with a superior microscope also validate the orgone experiments of Wilhelm Reich, who described similar microbial processes in the 1940s (see *The Cancer Biopathy*, Farrar, Straus & Giroux, New York, 1973). He accepted only "terminal" cancer patients and his treatment was free. Commonly, pain diminished, blood and weight improved, and tumours shrank or disappeared. Despite this, the patients died. From this, Reich concluded that tumours are not an important part of the disease.

In this disease, strange synthetic-looking fibres come out of the skin. This suggests to me that Morgellons may be the result of the crystalline *Mycoplasma* species developed by the US Army.

Reich's work was so threatening to the medical establishment that all of his published books were burned and his equipment was destroyed under FDA supervision. He maintained that a court is not a proper place to discuss a scientific theory. He died in 1957 in a US prison. (For more biographical information, see <http://www.wilhelmreichtrust.org/biography.html>.)

Wilhelm Reich's most important achievement—which I regard as the greatest scientific discovery of the last century—was his discovery of the *bion* as the basic unit of biological life. Reich found that every kind of food and vegetable matter, when heated to incandescence and then dropped into a sterile nutrient solution, evolved into round, moving or pulsating bions that appeared blue in dark-field microscopy or when viewed with a fluorescent microscope. He sacrificed fine-structure details and observed mainly at 3,000–5,000x in order to see colour and movement better. The stronger the blue colour, the higher the vitality of the entity. Under these conditions, healthy erythrocytes have a blue appearance while dead ones are black. According to Reich, this blue glimmer is the characteristic of bio-energy or life-force, which he called *orgone*. It is present not only in all living matter but also in water and air. Orgone originates in the Sun and is transmitted by sunlight. Bions, the biological units of orgone, may gradually aggregate and evolve into amoeba-like or protozoan structures.

Reich described another formation derived from degenerating proteins as *T-bacilli*, the "T" standing for *Tod* ("death") in German. These can easily be cultivated from cancer tissue, the blood of patients with cancer or precancerous conditions, and also from degenerating blood. Injected in high doses, they can kill mice within 24 hours; in lower doses, they produce cancerous growths. They are black, lancet shaped and of a similar size as described by Olbrich.

Also interesting is the observation that the blue bions paralysed and killed the black *T-bacilli* and even the much bigger *Proteus* bacilli. In the same way, strongly blue erythrocytes killed T-cells and pathogenic bacteria, but thereby the erythrocytes lost some of their blue colour, indicating that their vitality had declined in the process. When strongly charged red blood cells entered a tumour, cancer tissue started to disintegrate into non-motile T-bodies. But in addition, the red blood cells disappeared and only T-bodies remained visible. The

tumour developed large cavities which filled up with T-bodies. The originally blood-red cavities turned into a rust-brown colour from the disintegrating tumour and blood cells.

Reich observed that weak erythrocytes could be charged to become strongly blue and vital by using sunlight and especially his orgone accumulator which concentrates orgone from the atmosphere. Some healers have the ability to channel strong bio-energy with their hands and to some degree even remotely with their mind.

Degenerating Blood and Proteins

All cancers, autoimmune diseases and chronic infections seem to be associated with degenerating blood. This becomes apparent from the weak orgone charge of red blood cells and the presence of pleomorphic microbes in both plasma and erythrocytes. The weaker the blue colour and the more widespread and evolved the pleomorphs, the more the blood is degenerated and the more advanced is any chronic disease.

There is also a concern that blood used for transfusions can be contaminated with *Mycoplasma*. This contamination and the formation of T-bacilli in degenerating blood may be factors in the observation that transfusions often lead to worse outcomes than not using blood transfusions (see web page at: <http://tinyurl.com/6jslft9>).

Therefore, it is important for us to understand the conditions that cause blood to degenerate. A main cause is the presently widespread "leaky gut syndrome".

In this condition, the intestinal wall is permeable to microbial products present in the intestines, and also to only partly digested proteins which can now enter the blood. This greatly weakens not only the immune system, which tries to keep the blood clean, but also the vitality of red blood cells which become increasingly susceptible to invasion by pleomorphic microbes. Leaky gut syndrome appears to be a frequent outcome of antibiotic and chemotherapy drugs and other drugs that interfere with our intestinal flora. This interference allows *Candida* and other pathogenic microbes to take over and invade the intestinal wall, causing inflammation and making it permeable.

Also contributing are chronic infections and inflammations in other parts of the body. Further implicated is anything that reduces our vitality, such as

Under these conditions, healthy erythrocytes have a blue appearance while dead ones are black. According to Reich, this blue glimmer is the characteristic of bio-energy or life-force, which he called *orgone*.

stress and worry, pharmaceutical and recreational drugs, processed food and nutritional deficiencies, exposure to microwaves and electromagnetic radiation, root canal treatment, fluoride and mercury, as from amalgam fillings, and generally pollution of any kind.

According to Reich, T-bacilli originate from the degeneration of every type of protein. This degeneration starts when proteins lose their vitality. We commonly experience two forms of protein degeneration: one comes from the inappropriate use of cooked food, and the other from gradually accumulating protein waste in our tissues.

Food can lose its vitality through cooking, storage or various mechanical processes. It begins to lose vitality immediately after cooking, and a few hours later its vitality has completely disappeared. Therefore, if we eat soon after cooking we still get much of the original vitality, but the next day this cooked food may become a

source of T-bacilli. In a similar way, fresh food loses its vitality during long or inappropriate storage or mechanical processing and can then become unhealthy. This should not be a problem with properly dried food and baked products.

Another observation of Reich may provide a solution. If bions are mixed with T-bacilli, then the latter will be eliminated. Therefore, if we mix some fresh food high in vitality with

devitalised food, the overall body reaction will be positive. This also ties in with the observation that cooked food tends to cause digestive leukocytosis. This is an increase in the number of white blood cells produced after eating cooked food, indicating the presence of something toxic; but this reaction does not occur after eating raw food. Apparently, leukocytosis can be prevented by adding some raw food to cooked food.

Traditionally, the vitality of food has been checked by psychic means, such as via a pendulum, but now an objective instrument is available and even affordable. This is the Experimental Life Energy Field Meter (see <http://www.orgonelab.org/cart/ylemeter.htm>). It sells presently at US\$360, so a group of individuals could easily share in its cost and use.

The second form of protein degeneration is the accumulation of protein wastes inside cells and tissues. This commonly happens as we age, and is especially noticeable in all kinds of degenerative diseases. Up to 70 per cent of the volume of some cells can be filled with stored decaying matter. This problem arises mainly from habitually eating proteins without their natural enzymes. Most of these enzymes are destroyed by heating above 45 degrees Celsius. The solution is to eat mainly raw food, or undereat, or do periodic raw-food cleanses.

Understanding Autoimmune Diseases

The mechanism of mycoplasmal infections lets us understand the true nature of autoimmune diseases. During the acute initial stage of a bacterial infection, the immune system eliminates most of the invading microbes but some of them manage to survive by hiding inside the cells of a vulnerable organ or gland. They may remain there, possibly in their mycoplasmal form or even as spores, until the vitality of the host, and especially of the immune system, declines sufficiently. Then they gradually come out again into the blood, but this time they're camouflaged by being clothed in the biological markers of the cells in which they were hiding. This may work for some time, but eventually the immune system looks through the deception and starts attacking these imposters. Unfortunately, genuine body cells with the same markers are attacked as well. This then leads to an autoimmune disease involving the organ or gland in

which the original invaders were hiding.

However, according to my own experience and the research published by others, such autoimmune attacks can be stopped with appropriate natural therapies. For this to be successful, the blood needs to be cleaned of the pleomorphic microbes that weaken the immune system and the red blood cells. Then immune cells can also eliminate the disguised

microbes with the deceptive markers from the blood. This eventually stops the attack on normal body cells with these markers. Any surviving invaders may hide again as spores in suitable host cells. Such spores may even be transmitted to the offspring.

Understanding Cancer

Cancer may start with a primary infection, similar to that described for autoimmune diseases, or with pleomorphic microbes arising in tissues weakened by accumulated protein waste. In this case, the body contains the microbial infestation by encapsulating it. As long as the blood is clean, a tumour is just a tumour; not malignant and not a cancer. However, if the blood becomes infested with pleomorphs, often in response to an emotional trauma, the encapsulated microbes start multiplying and develop into higher forms. They produce growth hormones which cause a tumour to expand. Now the tumour is malignant but still contained. This situation may persist for many years, with the tumour slowly growing or becoming dormant for long periods, depending on the vitality of the body and the strength of the immune system.

Eventually, after many years and with a worsening pleomorphic presence in the blood, some tumours may

Therefore, if we mix some fresh food high in vitality with devitalised food, the overall body reaction will be positive.

form distant metastases. But the trend in modern medicine is to remove even small tumours. This now allows more dangerous microbes to spill into the blood, and dormant micro-metastases already present to spring into life years earlier than they would otherwise have done (see my "Cancer Surgery" web page at <http://tinyurl.com/3ob6o3o>).

However, even these metastases do not normally kill the patient. Commonly, tumours only kill directly if they press on vital body structures. Instead, most cancer patients die from cachexia—severe weight-loss and muscle wasting. The cause of this cachexia is progressive anaemia due to the destruction of most erythrocytes by pleomorphic microbes. This is the main cause of death from cancer.

Regenerating the Blood

It should now be obvious that the most important requirement to overcome a chronic disease, or to become really healthy and make our body disease-proof, is to regenerate our blood. We need to remove any higher pleomorphic forms and recharge our red blood cells with vital energy. This is the goal. When the blood has been regenerated, then the immune system seems to be capable of eliminating pleomorphic invaders also in tumours and affected organs. This then shrinks tumours and stops autoimmune attacks.

Our effort may start with sanitising the gastro-intestinal tract by using a combination of antimicrobial remedies and suitable probiotics or fermented foods. Continue this for several months or until any related disease symptoms are under control. For a recommended program, see my "Ultimate Cleanse" web page at <http://tinyurl.com/4cxzpu7>. Combine this with a high-quality diet high in fresh raw food (see the web page <http://www.health-science-spirit.com/HF2-1.html>), preferably a moderate exercise program and suitable outdoors activity. Try to minimise the negative factors mentioned in the previous section.

In addition, pay attention to blood in meat products. Blood that is low in vitality disintegrates rapidly into pathogenic pleomorphs, and especially T-bacilli. This shows the wisdom of ritual slaughter whereby the blood is drained from the animal. This is supported by the holy books and religious traditions of meat-eating societies, not only in Islam and Judaism but also based on biblical traditions in early Christianity. In contrast, *fresh* and *healthy* blood is a powerful healing agent and has been used for transfusions to cure cancer. The Masai rarely eat meat but typically drink the *fresh* blood of their cattle mixed with *raw* milk. Zulu tribes also drink *fresh* animal

blood, and Mongols drank blood from their horses.

A good way to check your progress is with Live Blood Analysis. If it does show problems in the blood, then have another check about every three months until the blood's appearance is normal. I generally recommend that you continue to follow your own specially designed health program if you decide to undergo this analysis. Another possibility is to use the Life Energy Field Meter to monitor the vitality of your blood and urine.

Rational Cancer Treatment

Some special consideration may be appropriate for overcoming cancer, especially in the presence of a large tumour or metastases. There are several possibilities. You may focus mainly on restoring vitality. Wilhelm Reich did this with his orgone accumulator. Even when tumours disappeared, many patients died, presumably from the toxic effect of disintegrating large tumours which overloaded the organs of elimination.

The Gerson diet is based on fresh vegetable juices to provide vitality, and it strongly focuses on eliminating the generated toxins. This gives it a much better success rate. However, it often leads to massive inflammations or healing crises when the immune system starts attacking the pleomorphic microbes and any tumours. One also needs to be careful not to

raise the blood sugar level unduly when drinking juices of sweet vegetables such as carrots; at least half of the juice content should be from green-leaf vegetables. In addition, juices should be sipped gradually.

Inflammatory crises can be avoided by greatly restricting food intake, as with the grape diet, which requires eating about one kilogram of grapes spaced out during the day, or with the Breuss diet, involving half a litre of fresh vegetable juice sipped during the day. Both programs are scheduled to last for six weeks. With this approach, the body tends to autodigest any tumours and the pleomorphic microbes starve to death, but one needs to have reasonably good weight and energy from the outset. Alternatively, one may do several periodic raw-food cleanses of shorter duration.

Still another approach is to alkalise the body. Professor Enderlein found that pleomorphic structures dissolve in an alkaline milieu. We cannot make the blood more alkaline than its natural, slightly alkaline, pH of about 7.4, but we can make the lymph system alkaline and, with this, any tumours. This may be done with different versions of sodium bicarbonate therapy and to a more extreme degree with caesium chloride. These therapies

We need to remove any higher pleomorphic forms and recharge our red blood cells with vital energy. This is the goal.

Ocean Ormus

LIFE FORCE ESSENCE

Control Plants Ormus & Fish Emulsion

Is Ormus a substance that heals diseases for people, animals and plants?

Can Ormus enhance your overall quality of life?

Amanda NSW says: What can I say about Ocean Ormus? It's wonderful! I find I let my intuition guide me on how much I need each time. It has a wonderful balancing effect on mind, body and spirit. It promotes a peaceful deep sleep.

There is a wonderful energy that comes from your Ocean Ormus.

I love your products and would recommend them to anyone without reservation! I know I will continue to use them for a long time.

Don NSW says: In just a few days I noticed my depression is gone, more effective than St Johns Wort. Better mental sharpness, better sleep and more energy.

Ocean Ormus is a quality ormus, sourced from the pristine Great Southern Ocean waters near Albany Western Australia. The vibrant energy of this special location helps make *Ocean Ormus* especially potent, along with the informational imprinting it receives from our crystalline array. 250ml - \$60.00 plus P+H

Try our wonderful Ormus *Skin Care Creams* which are rejuvenating for your face and body and made with all-natural ingredients.

Alpha M cream is for men and *Femme Essential* is for women. 120ml jars, \$50 each plus P+H

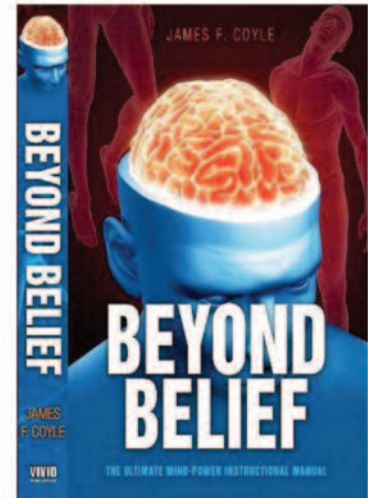

And *Garden Ormus* too, great for improving the size and quality of your plants & crops!

IN MEMORY OF ANOMALIST WILLIAM CORLISS

by Patrick Huyghe © 2011

William R. Corliss, regarded by many as the world's greatest contemporary anomalist, passed away at his home in Glen Arm, Maryland, on 8 July 2011 at the age of eighty-four. During a span of some 40 years, the physicist turned stalker of paradoxical data brought to light a mind-boggling collection of unexplained observations, embarrassing deviations and paradigm-shattering discoveries that orthodox science had largely swept under the carpet of consensus. In recognition of these contributions, he received in 1994 the Tim Dinsdale Award presented by the Society for Scientific Exploration.

Corliss was born on 28 August 1926 in Stamford, Connecticut, and served in the US Navy during World War II. After receiving degrees in physics from Rensselaer Polytechnic Institute (BS) and the University of Colorado (MS), he worked for more than a decade as a physicist in industry, first with Pratt & Whitney Aircraft, then with General Electric Company, and finally with The Martin Company where he was Director of Advanced Programs in its Nuclear Division. In 1963 he began another career, in technical writing, and produced works for NASA and the National Science Foundation on such topics as electric power generation, computers, space radiation, robotics and telecommunications.

With an interest in "outlaw science" that had been sparked by the reading of a controversial book on geology in 1951, Corliss turned in 1974 to writing about scientific anomalies, an

endeavour he christened The Sourcebook Project. In the decades that followed, he conducted a massive amount of library research, poring through many thousands of scientific journals and gleaning from them a wide assortment of neglected data in the fields of geology, biology, archaeology, astronomy, psychology and geophysics. He first reprinted the accounts he found in a series of six ring-bound volumes, followed by six massive hardback volumes that he called "handbooks".

By 1982, he had switched to a hardback catalogue format that not only presented examples of various anomalies and their sources, but also gave an evaluation of the quality of data—and an evaluation of an anomaly's possible impact on science, from being a mere curiosity to being "revolutionary", by which he meant that the anomaly could not even be explained by a modification of present scientific laws.

The evaluations were necessarily subjective. He admitted that it was difficult to categorise and organise

the unknown, and always pointed out that the material he chose to include in his anomaly catalogues reflected what—in *his opinion*—was not well explained, as "anomalously is often in the eyes of the beholder".

Not all the anomalies he highlighted presented a threat to mainstream science. Some are mere blemishes. Others are leaks, cracks and fissures in the foundations and façades of the various sciences. But there are potholes as well, the potential game-changers.

"Instead of simply accepting nice, slick theories like evolution, relativity and continental drift," Corliss said in 1980, "I think we should occasionally re-examine them to be sure they are not accepted just because they are so slick. And based upon the material I've collected, what I'm saying is: I'm not so sure."

Among the major paradigms widely considered to be fact that his catalogues of anomalies put at risk are: the expanding universe; the Big Bang origin of the universe; Neo-Darwinism, specifically evolution via

NEWSCIENCENEWSCIENCENEWSCIENCE

random mutation and natural selection; plate tectonics and continental drift; special and general relativity; and the assumption that genomes are the complete blueprint for life forms.

Corliss made no claims of completeness. Indeed, he would constantly point out that he had covered just a fraction of the literature on a subject. In 2005, he wrote that his 40 published volumes detailing more than 2,000 scientific anomalies and "provocative" phenomena represented just 50 per cent of his database. And even after decades of work, only a handful of English-language journals had received his serious attention.

"The journals in other languages, government reports, conference papers, publications of research facilities, proceedings of state academies of science and an immense reservoir of pertinent books," he noted, "remain almost untapped." The task he faced was daunting: "The anomalies residing in the world's literature seem infinite in number."

He never lost his enthusiasm, and one has to admire his courage in single-handedly attempting a project

of such enormous scope. His catalogues are unique in the annals of science in that he catalogued not what is known but what is *not* known. "It seems to me that any organised activity like science would have done this a long time ago," he said. "It is at least as important to realise what is not known as it is to recognise the well-explained."

Though Corliss has often been called a modern-day Charles Fort, their differences are considerable. Unlike Fort, he avoided using newspapers as the source of his data whenever possible, preferring instead to depend on academically accredited journals that described anomalies that were the product of scientific observation, research and exploration.

Furthermore, Corliss, unlike Fort, was not anti-science and he did not editorialise. He thought that the data were damning enough on their own. "In the Catalog of Anomalies," he wrote, "the data rule; all theories and hypotheses are held to be tentative. The history of science proves that this is a wise policy." Corliss saw anomalies as a way to renew, to reinvigorate, science.

While his first volume of anomalies,

entitled *Strange Phenomena*, was actually recommended by both *Nature* and *Science*, quite often the publication of his catalogues met with disbelief, even disdain. The critics claimed that the data must be in error, that the data are anecdotal or too old, that a supposed anomaly was explained long ago. His reply? "The baseline of well-established theories, against which anomalousness is measured, is always shifting and some data, indeed, are bad. But for every anomaly or example that can be legitimately demolished, ten more take its place. Nature is very anomalous or, equivalently, Nature is not yet well-understood by science." Such words did not endear him to the scientific mainstream, which largely ignored much of his later work. The late sociologist Marcello Truzzi, however, called Corliss "an unsung hero of science".

A Legacy for Humanity

Corliss did not have any illusions about the impact that The Sourcebook Project would have on science. Would it revolutionise science? "Probably not—at least not immediately," he wrote.

I was introduced to The Sourcebook Project in the late 1970s, when I received my very first published volume of anomalies from the mail-order service he operated with his wife, Virginia. Shortly afterwards, I met and interviewed Corliss for an article I was writing on his work for *Science Digest*. We kept in touch over the years, and I would occasionally send him a news clipping for the newsletter he published, called *Science Frontiers*.

After being involved in producing a couple of science exhibits for museums, I began to think that his work should have a wider audience, that there should be a William Corliss Museum of Anomalies or at least an

William Corliss lecturing at FortFest in the early 1990s.

HOW TO FIND YOUR MISSING BIT

Gareth J. Owen

With a modicum of humour by our side, this incisive book travels through the absurdity of our society, questioning what we do to ourselves and the planet. As we go searching for our 'missing bit' and a way to turn this mess around, we travel from the Northern Beaches of Sydney to the streets of London and many average places in between.

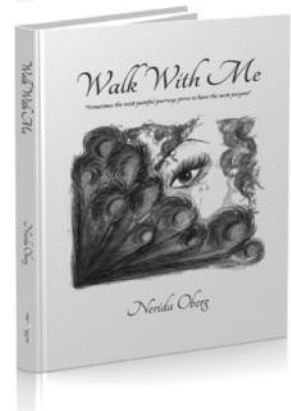

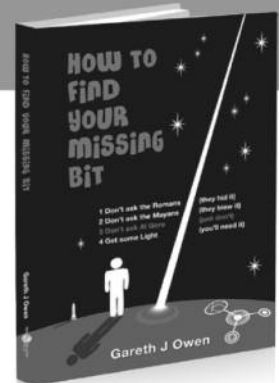

On the way we encounter 'thin places', strangeness in the fields of Wiltshire, dead Mayans, allegorical aliens agendas, endemic poverty, empty oil wells, lousy food, French people, illusory money, fear, global icing and only one taxi on the Isle of Iona ...

WALK WITH ME

Nerida Oberg

A prominent Sydney psychotherapist and senior college lecturer, who for twenty years specialised in grief counseling, is suddenly faced with the death of her own twenty year old daughter, only to then find that her whole academic and professional career is thrown into doubt when she starts to receive messages from her daughter after her death. Join Nerida in a deeply moving and very personal account of the days surrounding the actual loss of her daughter through to the transformational power of the realisation that our concept of death is both limited and incomplete.

"I strongly encourage you read this book. "Laura Daniel, Editor The CAPA Quarterly

INFLUENZA AND THE TUBERCULOSIS CONNECTION

If the microbe that causes influenza is actually a form of cell-wall-deficient mycobacterium, such as the one responsible for tuberculosis, we could end up with no defences against another Great Pandemic.

Part 2 of 2

by Lawrence Broxmeyer, MD

<http://drbroxmeyer.netfirms.com>

As the greatest influenza pandemic of all time continued to rage, other doctors were speaking out. In 1920, with the killing fields of 1918–19 laid out before him, British physician Marcus Paterson took yet another jab at the "flu" epidemic.²⁸ He wrote: "During the time I was Resident Medical Officer at Brompton, it was usual to classify a rise of temperature in an ordinary case of 'chronic' pulmonary tuberculosis as influenza, even when there was no epidemic."

As for the well-known sick feeling (malaise) and preliminary symptoms of reactivated tuberculosis, Paterson asked: "Are these symptoms any different from those of the ordinary onset of influenza? They are not, simply because they denote not a particular disease, but a toxæmia due to bacterial action."

Paterson's reference to the confusion of sorting out influenza from TB was pointed: "Surely there is no more emphatic testimony to the clinical difficulties of a differentiation between the two diseases when one group of clinicians describes a rise of temperature in a proven case of tuberculosis to be influenza, and another section terms an arrested case of tuberculosis with pyrexia [fever] an active case of tuberculosis."

Writing in 1920, after the greatest pound-for-pound health catastrophe ever, Paterson said what every physician still learns as a resident: "Before the war, it was usual to classify a sudden onset of acute symptoms as influenza, and it is very easy to appreciate the reason. When a person is taken ill, the patient's friends demand to know at once what is the ailment: hence it must be given a name, and 'influenza' is a good enough term for the moment."

What Paterson left out, as a given, was the hysteria in the family and immediate community that would intrude were the diagnosis of tuberculosis rendered. Instead, he stated that he knew of no physician who could differentiate clinically between tuberculosis and influenza. He said that he "shudders to think" of the number of times that "tubercle bacillus have been classified as influenza without further investigation". To Paterson, this represented countless opportunities to cure the real cause, masked under the designation "influenza". His conclusion: "There is no research required here. It is a known fact that what is at present called influenza is often tuberculosis. But the knowledge is not practically applied. It is information of inappreciable value lying idle. It is no new discovery, or its import would ring throughout the world." In fact, for Paterson, much like it was for von Unruh, "influenza" was simply the first indication of tuberculosis.

Many years later, well after influenza was proclaimed "a virus", influential Johns Hopkins head of pathology Arnold Rich summed things up best:²⁹ "In relation to the question of the effect of influenza upon tuberculosis, it should be pointed out that in many cases in which pulmonary tuberculosis has been thought to have followed an attack of influenza, it is altogether probable that the supposed attack of influenza was, in reality, a manifestation of an existing tuberculous infection; for tuberculo-protein, whether absorbed from a

spreading lesion or injected into the body, can cause constitutional symptoms (fever, malaise, headache, joint pains, anorexia, prostration) quite like those of influenza." Rich concluded: "The writer has seen attacks closely simulating influenza occur in healthy, tuberculin-positive laboratory workers as a result of the accidental inhalation of the vapor of boiling tuberculin."

Rockefeller Institute for Medical Research, NYC, 1931

American virologist Richard E. Shope, based in the Department of Animal Pathology at the Rockefeller Institute, was in direct communication with British investigators Smith, Andrewes and Laidlaw at Mill Hill, England, and sent them samples of his flu virus and Pfeiffer's bacillus. But the British group, in return, wasn't being 100 per cent supportive.

Virologists like Shope and Laidlaw saw a great opportunity for virology provided by the 1918–19 pandemic. Shope began the first salvo on swine "influenza", again falling back on the stale conception that the mild disease and flu-like symptoms were created in pigs by what he believed to be a "filterable virus".³⁰ Shope had the singular advantage of realising that since 1918, pigs had been coming down with the same "influenza" each year. Having lived in Iowa, he had grown up with the knowledge. But beginning his investigations in earnest, Shope became perplexed. Not a virus but a bacterium kept cropping up in swine mucous secretions, and it resembled Pfeiffer's bacillus or *Haemophilus influenzae* (H. flu) more than anything else. The problem was that he couldn't infect most of his subjects with the bacterium. So he took the mucous secretions of sick pigs and put them through a filter which he thought would only yield

a virus. However, incredibly, even the filtrate from the discharge just gave low-grade symptoms. So if it wasn't a "virus" that had caused the deadly strains of flu, and if it wasn't a bacterium present in most malignant "flu", what could it be? To Shope, possibly both, working in conjunction with one another. In 1931, he introduced both the "virus" and Pfeiffer's bacillus into animals, which subsequently came down with just the deadly "flu"³¹ complicated with pneumonia that had killed between 50 and 100 million people in 1918–19.

As late as 1944, Shope insisted that the pandemic influenza was this meld of "virus" plus Pfeiffer's bacillus.³²

As late as 1944, Shope insisted that the pandemic influenza was this meld of "virus" plus Pfeiffer's bacillus.

But as opposed to what's written in today's revisionist history, the idea wasn't really his. When Shope was a teenager, the announcement that hog cholera (swine flu) was due to the combined action of a bacterium and a virus stimulated French-Canadian microbiologist Félix d'Hérelle in 1917 to publish his discovery of bacteriophages—viruses which live in and can destroy or alter the shape of

bacteria—followed by his 1921 classic book on such bacterial viruses.³³

Actually, it was some time after joining Rockefeller in 1928 that Richard Shope switched his interest from tuberculosis to virology. Originally he was looking for simply a bacterial cause such as Pfeiffer's bacillus for "swine influenza", as the medical orthodoxy of his day dictated. There is no evidence in the literature that Shope even knew about the filterable forms of *H. influenzae* (Pfeiffer's bacillus) which also appeared "viral". To accept Shope's conclusion, an exception had to be made. There wasn't a single cause behind the 1918–19 pandemic, but two: a virus and a bacterium.

UK Medical Research Council, Mill Hill Farm, 1932

British virologists Smith, Andrewes and Laidlaw had started out by falsely trying to link the virus which caused dog distemper to human influenza. Nor was the fact lost on many that Patrick Playfair Laidlaw's group seemed to fly directly in the face of Shope's multifactorial conclusion, which said that both a virus and Pfeiffer's bacillus from swine were necessary to acquire the flu. Just the "virus" itself was necessary, claimed the British trio.³⁴

Christopher Howard Andrewes, who would subsequently receive the lion's share of credit for discovering

the human influenza virus, thought that he had discovered the viral cause of rheumatic fever at the Rockefeller Institute as far back as 1923.³⁵ When that didn't pan out, and back in England, he, in a similar way to Shope in America, put his efforts into finding the virus behind cancer but again they proved wrong. But when Walter Fletcher, first secretary of Britain's Medical Research Council (MRC), started a new program, Andrewes soon found himself at the Mill Hill farm under virologist Patrick P. Laidlaw and his colleague Wilson Smith. The MRC was originally founded as a consequence of the recommendations of the Royal Commission on Tuberculosis, but under Fletcher it had apparently gone viral.

When influenza appeared in epidemic proportions during the autumn of 1932, Andrewes and Smith worked out a plan of action designed to reveal their hypothetical virus. In the midst of this, Andrewes began to feel unwell with flu-like symptoms. Smith, having passed Andrewes's respiratory secretions through a filter, immediately began to inject these intracerebrally and intratesticularly into mice, rabbits and guinea pigs. Nothing happened straight away, but just afterwards Laidlaw was informed by the director of Wellcome laboratory, one of their reference labs, that some of their ferrets appeared to be suffering from influenza at the same time as the epidemic of influenza was raging among Wellcome's staff. It turned out that these Wellcome ferrets didn't have influenza but were suffering from distemper. Not to be dismayed, Smith then inoculated several other ferrets through the nose with filtrates from Andrewes, and shortly afterwards influenza appeared. Subsequently, Wilson Smith himself came down with a flu that the rest of the group suspected was from a ferret. From the filtrate of this strain, WS (Wilson Smith) was isolated.

As head of a government lab, Dr William Crofton actually examined the famed WS strain that had afflicted Wilson Smith. Today, this strain is still being used in research; it bears the alphanumeric notation A/WS/1933, for Influenza A/Wilson Smith/1933. Crofton, of all people, knew that there was nothing "viral" about the WS strain; nor did it have anything to do with "influenza". During the summer and winter of 1918, he was isolating Pfeiffer's bacillus from 100 per cent of influenza cases. But to do so, he was using improved special-growth agents and a sufficiently high-powered microscope. Crofton's "moist-

chamber method" kept his culture medium warm and moist. If the microbe wasn't kept warm, Crofton found, then it couldn't be isolated in every case. Pfeiffer's bacillus was clearly pleomorphic (many forms), with viral-like forms that could easily pass through a filter.

So, in 1938, Crofton cornered Andrewes, who was presenting a paper before the Epidemiology Section of the Royal Society of Medicine: "I asked him how then he knew that his colleague Wilson Smith, from whom was first isolated the virus, had, in fact influenza, and how he and his fellows dared to advertise to the four corners of the earth that at long last the [viral] cause of influenza had been discovered. I told him that I had ascertained that Wilson Smith had, in fact, influenza, because he was swarming with [bacterial] influenza bacilli. I asked him

why no cultures on proper medium were made from the infected ferret to ascertain if the Pfeiffer bacillus could be grown, as it would have been inevitably if, in fact, influenza had been transmitted. Andrewes replied not one word, and the authorities of the section would not publish my criticism."³⁶

Apparently, the fix was already in through powerful governmental forces at Mill Hill's MRC. Christopher Andrewes, flushed with victory, suggested with the help of Burnet and Bang that the term "myxovirus", meaning "mucous virus", be incorporated into a family name for the influenzas.³⁷ This, one imagines, was because the organism came from mucous secretions.

By May 1935, Laidlaw, in "Epidemic Influenza: A Virus Disease"—an article seemingly titled to assure himself—would give the only credence he saw fit to Crofton and the many scientists like him by saying that although he thought that it was

"gradually" being proven that a "filterable virus" was primarily responsible for epidemic influenza, "Pfeiffer's bacillus or *Haemophilus influenzae* is still regarded by many observers as the prime cause of the disease and many of its complications".³⁸

Crofton was convinced by scientists like Albert Calmette at Pasteur that, like Pfeiffer's bacillus, certain forms of another mycobacterium, tuberculosis, appearing both minuscule and viral, could pass through the smallest of filters. So, at a time when viral forms of TB were being documented scantily, Crofton struggled to link Pfeiffer's bacillus to the illness it so often infected in coordination with: tuberculosis. Pfeiffer's strongly resembled TB; it was just smaller.

Crofton, of all people, knew that there was nothing "viral" about the WS strain; nor did it have anything to do with "influenza". During the summer and winter of 1918, he was isolating Pfeiffer's bacillus from 100 per cent of influenza cases.

Rockefeller Institute, New York City, 1933

After the pandemic of 1918–19, the name of Pfeiffer's bacillus, *Mycobacterium influenzae*, was officially changed to *Haemophilus influenzae*. American bacteriologist Margaret Pittman, who later defined the two major strains of *H. influenzae*, both encapsulated and unencapsulated, pinpointed the influenza bacillus's name change to the 1920 report by Charles-Edward A. Winslow and colleagues for the Society of American Bacteriologists' nomenclature committee.³⁹ In the same Rockefeller Institute paper, Pittman admitted that pleomorphist Philip Hadley, poster scientist for the many forms in bacterial life cycles, contributed "new and important knowledge concerning variations in bacteria", knowing full well that her own findings on the different virulence of "smooth" and "rough" forms of *H. influenzae* were probably held up for decades by Koch and Winslow's monomorphist dogma, which held enormous sway.

By any stretch, C.-E. A. Winslow was far from the ideal choice to head a panel to rename *Mycobacterium influenzae* to *Haemophilus influenzae*. Not only was he an avid one-form-only bacteriologist,⁴⁰ leaving very little room for a microbe which could appear in both fungal and bacterial forms, but his unique thought processes became obvious when, as Professor of Public Health at Yale, he said he believed that posture was a neglected cause of tuberculosis, a disease known since antiquity for its spine-bending changes.

Yet Winslow and his colleagues decided to ignore Pfeiffer's bacillus's previously documented fungal forms, concluding that, unlike the mycobacteria, it stained Gram-negative and liked haemoglobin. But neither was conclusive enough to warrant the name change that Winslow had in mind.

Tuberculosis specialist Stephen Maher wrote in 1913: "All non-acid coccal and bacillary derivatives of the tubercle bacillus are, strange to say, Gram-negative."⁴¹ Krylow confirmed Maher's observation that TB could stain Gram-negative.⁴² The Gram stain, developed by Hans Christian Gram, separates bacteria based on their cell walls. The thick layers in "Gram-positive" cell walls stain purple, while the thin "Gram-negative" cell walls appear pink. Like other bacilli, cultures of TB, on the other hand, could be Gram-positive when young but might become Gram-negative as they aged. Hans Much saw this in 1907⁴³, and Chandrasekhar reported it in 1983.⁴⁴ Therefore,

Yet Winslow and his colleagues decided to ignore Pfeiffer's bacillus's previously documented fungal forms, concluding that, unlike the mycobacteria, it stained Gram-negative and liked haemoglobin.

the fact that Pfeiffer's influenza bacillus was Gram-negative still didn't rule it out as a bacillary derivative of the tubercle bacillus. Furthermore, the organism was arbitrarily named *Haemophilus influenzae* (from the Greek *haemophilus*, meaning "blood-loving"), but it grew on the same blood-based cultures on which *Mycobacterium tuberculosis* had long thrived.⁴⁵

To many in the lay and scientific communities, bacterial names and classifications are hallowed ground. But Sneath and Brenner's 1992 paper⁴⁶ for the American Society for Microbiology clarified that there was no such thing as an official classification of bacteria or "approved lists" and that even *Bergey's Manual* was not "official" but merely the best consensus at the time. Therefore, Sneath and Brenner said, bacterial lists and classifications (called "taxonomy") are partly a matter of judgement and opinion, as is all science, and, until new information is available, different bacteriologists may legitimately hold different views. In the same vein, George Fox and colleagues reminded us that even regarding today's sacred 16S rRNA sequence identity as a criterion for species identification, 16S rRNA may not be sufficient alone to guarantee species identity.⁴⁷

Regrettably, no attempt at bacterial nomenclature, since its inception, has left room for a microbe such as Pfeiffer's, which exists in more than one form, both bacterial and fungal, true to its original mycobacterial designation. The price of this to the world's future health and welfare would be substantial. Today, we are carefully taught that Pfeiffer's bacillus, historically *Mycobacterium influenzae*, was erroneously thought to have caused and been behind the Great Pandemic of 1918–19. We are not taught that Pfeiffer's

bacillus itself has a viral cell-wall-deficient phase which goes right through a filter. Nor are we taught that its original difficulty in cultivation on normal media alone, without blood's haemoglobin, almost classified it, *a priori*, as a "virus" in the minds of those who relentlessly tracked a virus for influenza.

Sloan-Kettering Institute, New York City, 1952

It was in 1952 that Cornelius P. Rhoads, Director of the Sloan-Kettering Institute for cancer research in New York City, remarked in the introduction to a conference on viruses and cancer that the term "virus" had achieved "a high professional status with doubtful credentials".⁴⁸

Papers such as that of Peter Palese,⁴⁹ of the Mount

Sinai School of Medicine in Manhattan, remind us that, even in 1992, millions in China already had antibodies to H5N1, meaning that they had contracted it and that their immune system had little trouble fending it off.

And as Dutch science historian Ton van Helvoort aptly pointed out, by the 1950s the word "virus" had become so mouldable a concept that one could speak of virus workers without the existence of any consensus whatsoever of what viruses were.⁵⁰ Extremely supportive of this mouldability among virologists was biophysicist Max Delbrück's subtitle for "Viruses 1950", a conference held at the California Institute of Technology: "Proceedings of a conference on the similarities and dissimilarities between viruses attacking animals, plants, and bacteria, respectively".⁵¹ Indeed, in the 1930s and 1940s, the concept of "filterable virus" was subjected to such criticism that its very foundations were threatened. Statements like those coming from pioneer virologist André Lwoff in 1957, such as "viruses should be considered as viruses because viruses are viruses", were unacceptable.⁵²

Also under the gun was Thomas M. Rivers, "the father of modern virology", who said that viruses could be differentiated by three things; namely, their invisibility under the ordinary microscope, their ability to pass through the finest filters because of this small size, and their inability to propagate themselves in the absence of susceptible cells.⁵³ But English bacteriologist Frederick Twort, working in 1915 on John's bacillus, presently itself suspected of being a tuberculosis-like mycobacterium, had to add special factors before this bacterium would grow on a lifeless medium.⁵⁴ Henry Sweany's 1933 study showed that certain virus-like forms of tuberculosis met Rivers's criteria as well.⁵⁵ Rivers, who would become head of the Rockefeller Institute, was wrong. In fact, in 1951, Emmy Klieneberger-Nobel showed just the opposite: that some bacteria could pass through filters that some of the larger viruses could not.⁵⁶ Wade and Manalang, as noted in part one, proved this with mycobacterial forms of Pfeiffer's.⁵⁷

To say that the history of the theoretical underpinning of virology has been a tortuous one is probably an understatement, and, incredibly, many virologists even to this day persist in using the flawed reasoning that that which passes through a microfilter is a virus. Certainly, one exception to these is world-renowned virologist and molecular biologist Stefan Lanka, who, to this day, questions the very existence of H1N1 and its allied forms as a swine flu virus altogether. Lanka, after reviewing the data, came to the conclusion that studies,

micropictographs and even the data have been manipulated. Lanka was the first to isolate a maritime virus. Through personal communication, he has assured this author that his repeated investigative letters to the National Institutes of Health (NIH) regarding supportive material for the "influenza virus" have gone unaddressed and unanswered.⁵⁸

Challenging the Medical Orthodoxy

Shannon Brownlee and Jeanne Lenzer are not new to writing incisive warnings regarding public health. Among their writings listed on Medline is a *British Medical Journal* treatment entitled "Doctor takes 'march of shame' to atone for drug company payments".⁵⁹ That influenza vaccination and oral antiviral studies have been consistently pushed and paid for by pharmaceutical companies themselves is no secret. But once in a while, unsponsored papers such as Brownlee and Lenzer's 2009 article in *The Atlantic* clear the misinformation:⁶⁰

"Whether this season's swine flu turns out to be deadly or mild, most experts agree that it's only a matter of time before we're hit by a truly devastating flu pandemic—one that might kill more people worldwide than have died of the plague and AIDS combined. In the US, the main lines of defense are pharmaceutical—vaccines and antiviral drugs to limit the spread of flu and prevent people from dying from it. Yet now some flu experts are

challenging the medical orthodoxy and arguing that for those most in need of protection, flu shots and antiviral drugs may provide little to none. So where does that leave us if a bad pandemic strikes?..."

The authors added: "But what if everything we think we know about fighting influenza is wrong? What if flu vaccines do not protect people from dying—particularly the elderly, who account for 90 percent of deaths from seasonal flu? And what if the expensive antiviral drugs that the government has stockpiled over the past few years also have little, if any power to reduce the number of people who die or are hospitalized?"

"The US government—with the support of leaders in the public-health and medical communities—has put its faith in the power of vaccines and antiviral drugs to limit the spread and lethality of swine flu. Other plans to contain the pandemic seem anemic by comparison. Yet some top flu researchers are deeply skeptical of both flu vaccines and antivirals.

"Like the engineers who warned for years about the levees of New Orleans, these experts caution that our defenses may be flawed, and quite possibly useless against a truly lethal flu. And that unless we are willing

Lanka, after reviewing the data, came to the conclusion that studies, micropictographs and even the data have been manipulated.

to ask fundamental questions about the science behind flu vaccines and antiviral drugs, we could find ourselves, in a bad epidemic, as helpless as the citizens of New Orleans during Hurricane Katrina."

Brownlee and Lenzer's advice is well taken. This paper has intentionally brought to light evidence questioning the most "fundamental" science behind influenza, its vaccine and its antiviral cures: is influenza really caused by a virus at all?

For if it is indeed caused by a form of viral, cell-wall-deficient mycobacterium such as *Mycobacterium influenzae* or *Mycobacterium tuberculosis*, as scientists such as Wade and Manalang, von Unruh and Rich have documented, we could find ourselves in the midst of yet another devastating, infectious Katrina, every bit as lethal as the Great Pandemic of 1918–19. ∞

About the Author:

Lawrence Broxmeyer, MD, is currently an internist and medical researcher. He was on staff at New York affiliate hospitals of SUNY Downstate, Cornell and New York universities for approximately 14 years. In conjunction with colleagues in San Francisco and at the University of Nebraska, he first pursued, as lead author and originator, a novel technique to kill AIDS mycobacteria and tuberculosis with outstanding results (see *The Journal of Infectious Diseases* 2002 Oct 15; 186[8]:1155-60). He contributed a chapter regarding these findings to Sleator and Hill's textbook *Patho-Biotechnology* (Landes Bio-science, 2008). He has also written many peer-reviewed articles, available on PubMed at <http://tinyurl.com/3u2ly8s>. His two-part article "The Untold Truth About Cancer" was published in NEXUS vol. 17, nos 1 and 2.

Dr Broxmeyer can be contacted by email at nyinstituteofmedicalresearch@yahoo.com and via his website <http://drbroxmeyer.netfirms.com>.

Who knew producing a healthy 'fluoride free' water would be so difficult?

For years we have been working to produce a fluoride free filtration system. Not just any type of system. We wanted a filter that would remove fluoride better than anything else available. We also wanted it to retain the beneficial minerals so important to water structure, pH balance and health. We didn't realise how difficult this would be.

Fluoride Removal Facts

When we tested the claims for 'activated alumina' we found they didn't match reality. In lab tests we found that water pH needed to be below 5.0 to work. Not likely. We then tested 'bone char' and found after just 100 litres fluoride removal was less than 50%.

With Reverse Osmosis we found that even the best systems could only reduce fluoride by 85 to 95%. Clearly we needed to find a better solution.

So, we designed from scratch a new type of filtration system that combines two fluoride removal technologies with our world leading volcanic mineral enhancement process.

Introducing the Ultimate Fluoride Filtration System

After seven years of intensive research and testing we are proud to announce the most advanced fluoride filtration and water energising system ever...

- ✓ Nine individual filtration and enhancement stages
- ✓ Removes fluoride at rates >99.5% for life*
- ✓ Remineralises water with calcium, magnesium and silica
- ✓ Naturally ionises and energetically cleanses
- ✓ Produces a 'wetter' more hydrating water

To find out more about this amazing system visit our website or call now.

TC energy design

harmonic resonance in glass

Enjoy the difference that
structured water
can make to your life

by restoring
your water's
integrity
with

**handblown,
harmonic glassware**

TC Energy Design products are masterpieces of form and harmony, beautiful mouth-blown glassware uniquely shaped to revitalise and restructure water.

Created from musical compositions that are converted into spatial dimensions and formed into balanced, harmonic glassware, the shape and form of the glassware generates an energising resonance pattern that restores water with subtle waves of harmonic sound.

The special design of TC products revitalises water, reminding it of its origins and restoring the integrity of its structure within **3 minutes.**

Discover the astounding energetic effect of TC Energy carafes, hand blown glassware and plates and enjoy all the benefits of drinking energized, structured water.

JUST ARRIVED - TWO NEW BOOKS TO NEXUS

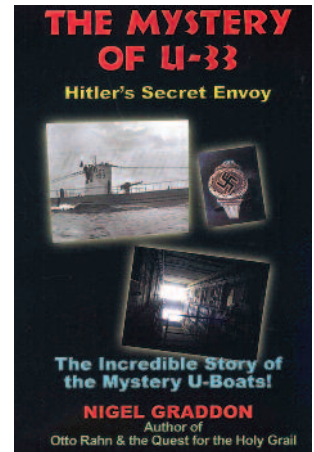

Gnostic Templar Grand Prior Mark Amaru Pinkham presents the amazing history and teachings of the Left Hand Path—which includes the world's gnostics, alchemists, secret societies, and mystery school initiates—and its continual battle with the patriarchal adherents of the Right Hand Path.

World War II historian Nigel Graddon chronicles a number of mysterious U-Boat missions—including trips to Antarctica—that took place both during and after the war. He details the strange landing of U-33 in Scotland in 1940, which involved the top-secret Enigma encoding device.

Bruce L. Cathie - books and DVD

THE BRIDGE TO INFINITY
Harmonic 371244

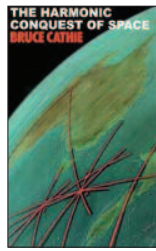

In *The Bridge To Infinity*, Bruce Cathie theorises that the whole of physical reality which is

tangible to us, is formed from the basic geometric harmonics - or harmonics - of waveforms of light.

In this book you will discover the harmonic geometries of water, temperature, sound, the laser, the pyramids of Egypt and China, Stonehenge, bomb tests the volcano at Krakatoa, the harmonics of destruction, the world grid system, and much more.

THE HARMONIC CONQUEST OF SPACE

Topics include: Mathematics of the World Grid; the Harmonics of Hiroshima and

Nagasaki; Harmonic Transmission and Receiving; the Link Between Human Brain Waves; the Cavity Resonance between the Earth; the Ionosphere and Gravity; Edgar Cayce; the Harmonics of the Subconscious; Stonehenge; the Harmonics of the Moon; the Pyramids of Mars; Nikola Tesla's Electric Car; the Robert Adams Pulsed Electric Motor Generator; Harmonic Clues to the Unified Field; and more.

THE ENERGY GRID
Harmonic 695

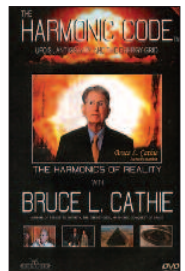

This is the breakthrough book that explores the incredible potential of

the Earth's energy grid.

Cathie investigates the Harmonics of Light and how the Energy Grid is created. Includes chapters on UFO Propulsion, Nikola Tesla, Unified Equations, the Mysterious Aerials, Pythagoras & the Grid, Nuclear Detonation and the Grid, Maps of the Ancients, an Australian Stonehenge examined and much more.

THE HARMONIC CODE
UFOs, AntiGravity and
the Energy Grid - (DVD)

In this documentary DVD, UFO and anti-gravity researcher and author Bruce L. Cathie explains the unknown secrets of our reality in this exclusive documentary into his life and research.

Discover the truth about matter and antimatter; time travel; UFO sightings; Earth's energy grid; harmonic mathematics; and the connection between atomic bomb tests and volcanic activity.

THE DEEP SECRETS OF A UFO THINK-TANK

Since 1946, RAND has been intimately involved in the highly classified study of UFOs for the US government, as confirmed by once-secret reports and revelations by key members of the military-industrial complex.

by **Anthony Bragalia**
© 2009–2011

The Bragalia Files
<http://bragalia.blogspot.com/>

Since the 1940s, the US government has quietly engaged one of its key defence and intelligence agency contractors as a secret UFO "think-tank". Investigation reveals that the esteemed RAND Corporation is a think-tank that has given far more than "passing thought" to things extraterrestrial.

RAND's hidden history of UFO involvement has been discovered to include work in policy analysis, evaluation of evidence and advice on the potential technological advantages achieved from UFO study. Telling connections have also been found between RAND and the 1947 Roswell, New Mexico, crash event.

What is RAND?

RAND Corporation was established in 1946 by the United States Army Air Forces as Project RAND (for Research ANd Development) and since 1948 has been registered as a nonprofit organisation. It is funded through government contracts, university collaborators and by "private donors". RAND's primary agency clients include the Central Intelligence Agency (CIA) and the Defense Advanced Research Projects Agency (DARPA).

Headquartered in Santa Monica, California, the think-tank maintains branches worldwide. RAND's stated mission is to help to "improve policy and decision making through objective research and analysis". Its work is officially conducted "for the public welfare and security of the United States of America".

Over 30 Nobel Prize winners have been employed by RAND. From physics to economics, the 2,000-person think-tank provides high-level information and evaluation to the US government. Deeper review shows that RAND has conducted studies in such areas as weapons development, intelligence gathering and analysis and the design of sensitive underground installations for the US Air Force (USAF).

Far more concealed is RAND's intimate involvement in highly classified UFO study for the US government:

RAND's Founders Held the Secret of the Saucers

From its very inception, the men of RAND knew much about saucers. RAND was conceived by Donald Douglas, Sr, founder and CEO of the Douglas Aircraft Company (and a protégé of Dr Jerome Hunsaker at Massachusetts Institute of Technology) along with two military officer luminaries. These officers carried with them significant "UFO histories". The officers behind RAND were the then Major General Curtis LeMay (the Deputy Chief of Air Staff for Research and Development) and General Henry H. "Hap" Arnold (considered the "father" of the modern US Air Force, which was established in September 1947). In May 1948, RAND was separated from Douglas Aircraft and became its own operating entity.

Among RAND's earliest government reports was the enigmatically titled "Preliminary Design of an Experimental World-Circling Spaceship".

Curtis LeMay expressed deep interest in and concern about the flying saucer phenomenon. More than this, he was a keeper of the purported 1947 Roswell UFO crash debris. This was revealed in a stunningly candid interview with the late US Senator Barry Goldwater. Goldwater (a former US presidential candidate and a command pilot with the rank of Major General) was LeMay's professional associate and close friend.

LeMay's UFO involvement was related by Goldwater in a live worldwide broadcast in 1994 with CNN's Larry King. The USAF had just issued its report that debunked the Roswell crash of 4 July 1947 as a Mogul balloon. Goldwater (who died just a few years later, in 1998) informed King that he knew the truth to be far different. He knew this, he explained, because in the 1960s he had approached the now General LeMay about the crashed UFO issue. Goldwater—who no doubt himself held the highest security clearances—told King:

"I think at Wright–Patterson, if you could get into certain places, you'd find out what the Air Force and the government [do] know about UFOs. Reportedly, a spaceship landed. It was all hushed up. I called Curtis

LeMay and I said, 'General, I know we have a room at Wright–Patterson where you put all of this secret stuff. Could I go in there?' I've never heard General LeMay get mad, but he got madder than hell at me, cussed me out and said, 'Don't ever ask me that question again!'" Goldwater never did.

LeMay was very well acquainted with the Roswell Army Air Field (RAAF) Commanding Officer, Colonel William "Butch" Blanchard. Blanchard oversaw the base at the time of the 1947 Roswell crash event. It is believed that Blanchard helped issue the original press release on the

crash, which prompted the famous resulting headline, "RAAF Captures Flying Saucer On Ranch in Roswell Region". Blanchard's former wife and his daughter Dale said that he was highly affected and visibly upset by the event. He repeated only that "those Russians have some amazing things". The Mayor of Roswell, William Brainerd, said that Blanchard told him: "What I saw was the damndest thing I've ever seen!" To Art

McQuiddy, editor of the *Roswell Morning Dispatch* in 1947, Blanchard said when questioned: "I'll tell you this and nothing more: the stuff I saw I'd never seen anyplace else in my life."

Pilot Ben Games related in interviews (with this author and to reporter Billy Cox) that he had flown then Lieutenant General Laurence Craigie (Director of the US Army Air Forces' Research and Engineering Division) to Roswell Army Air Field after the Roswell crash. Games said that Major General Curtis LeMay was well aware of Craigie's flight and that LeMay and Craigie were in close contact about the event.

In his 1965 biography, *Mission with LeMay*, the now retired General LeMay speaks sparingly about the UFO subject. Of course, he discounts that there is a government cover-up about UFOs. But LeMay belies this with a brief and telling statement found later in the biography: "There is not a question about it: these were things which we could not tie in with any natural phenomena known to our investigators." As early as 1943, this fabled airman was investigating unidentified flying objects.

Found in Box 166 of General Hap Arnold's papers (at the Air Force

Among RAND's earliest government reports was the enigmatically titled "Preliminary Design of an Experimental World-Circling Spaceship".

RAND Corporation Headquarters Campus, Santa Monica, California

Historical Research Center, Maxwell Air Force Base, Alabama) is detailed analysis from 1943 of a number of sightings of "small, luminous, silvery discs" reported by B-17 pilots. "Foo fighters", an anomalous aerial "ball-of-light" phenomenon, were reported and photographed by pilots during combat in Europe in the 1940s. Hap Arnold was intimately involved in the study of the baffling phenomenon.

In November 1945, an adjutant from Hap Arnold's office delivered a packet of sealed documents that related to analysis of the mysterious "foo fighters" to Arnold's friend, Jo Chamberlin of *The American Legion Magazine*. In a 1991 interview with researcher Jeffery A. Lindell (of the Indiana Folklore Institute and a retired USAF electronic warfare systems analyst), Chamberlin said that he retained these foo fighter documents from Arnold and had never opened them after 1945 when he first read them. At the time of the interview, Chamberlin said that he still had them but had promised Arnold he would never circulate them. Though Chamberlin wrote a generalised article on foo fighters for the magazine, he never circulated the papers that Arnold had given him and he never revealed their contents on the General's analysis.

General Arnold established the 509th Bombardment Wing and, like LeMay, he was closely associated with Colonel Blanchard, the Commanding Officer of the 509th and, as noted above, the Roswell base commander at the time of the 1947 crash.

On 7 July 1947, just days after the Roswell crash, Arnold was quoted in a United Press story: "General H. H. (Hap) Arnold, head of the Army Air Forces during WWII, said today the discs could be a development of United States scientists not yet perfected." Of course, during the period immediately following the Roswell crash, the US military was obfuscating by giving the public various explanations on the nature of the discs. But Arnold had known many years prior that US scientists could not be the reason for them. He knew that they were seen by his own pilots operating in the European theatre, as he had earlier reported.

RAND's Early UFO Involvement Confirmed

An official Air Force document dated 12 October 1948 has been located by Project 1947, an historical research group. Project 1947 is operated by respected researcher

Jan Aldrich, is supported by the civilian UFO research organisation CUFOS, and is known for its expertise in Freedom of Information Act (FOIA) requests. This 1948 document is very instructive about RAND and the early study of the troubling UFO phenomenon.

The subject header of this document is "Request for Study by Rand Project" and is directed to the US Air Force Chief of Staff. The author of the document is Colonel W. R. Clingerman, the USAF Acting Chief of Intelligence. Clingerman was associated with Project *Sign*, the USAF's official early study of the UFO phenomenon.

In the document, Clingerman seeks the approval of the USAF Chief of Staff: "It is requested that the special study, described in the inclosure, be approved and the Rand Corporation be authorized to establish a study of 3A priority, consistent in scope and degree of treatment with the described requirements."

In a later paragraph of the document, Clingerman explains that he wishes RAND to "assist in the collection of information relating to unidentified aerial objects that may possibly represent spaceships or spaceship test vehicles, and to assist in the analysis and evaluation of such reported craft; technical information that includes the distinguishing design and performance parameters for spaceships is considered necessary." He adds that it would be of "much value to this Command" to have RAND scientific personnel provide "further scientific clues that might assist in their detection and identification". Clingerman cautions: "It is further requested that Air Materiel Command be assigned to monitor the project

in conformance with Air Corps Letter 80-10, 21 July 1948, Section 3, Paragraph J."

We learn that RAND is held in high regard by the uppermost levels of government. It is an organisation considered ideal for initiation of work on the UFO phenomenon. It is thought that the "spaceships" had "distinguishing" characteristics and that RAND personnel would be uniquely suited to providing technical information about these and to finding "further scientific clues" about the "unidentified aerial objects". We also learn that RAND is to be "monitored" in this UFO work by the Air Materiel Command in conformance with an "Air Corps Letter" dated one year after the Roswell crash. The document can be accessed at <http://www.project1947.com>.

It is thought that the "spaceships" had "distinguishing" characteristics and that RAND personnel would be uniquely suited to providing technical information about these and to finding "further scientific clues"...

RAND and UFO Photo Analysis

Brief mention in extant literature notes that, in 1966, RAND Corporation coordinated the photographic analysis of an alleged UFO photo. The "Zanesville, Ohio, UFO photos" were taken on 13 November 1966 by local barber Ralph Ditter. Widely circulated at the time, the two photos appear to show a large saucer above the Ditter home. The RAND photo analysis determined that the object was a model only 3–4 inches in diameter and only 3–4 feet from the camera. The analysis was correct, and Ditter later confessed that the hoax was a way to please his curious daughter.

Interestingly, most such analysis is officially conducted by the National Geospatial-Intelligence Agency (and previously by one of its former divisions, the National Photographic Interpretation Center). RAND apparently has such capability as well, and has applied this to the UFO phenomenon.

RAND's UFO Sightings Analysis

While working for RAND, senior analyst Dr James E. Lipp wrote one of two scientific reports for the USAF's official UFO study, Project *Sign*, which was completed in February 1949 and was classified.

In the report, Lipp makes an extraordinarily astute observation. He notes that by the spring of the previous year, there had been a total of five atomic bomb explosions. Lipp believed that these explosions could have served as interstellar "smoke signals" and that they would be a potential source of extraterrestrial interest.

Of this RAND report, even sceptic Curtis Peebles notes that Lipp's evaluation may represent "the first US government-sponsored study of non-human life in the universe".

Lipp continues by saying that "visits from outer space are believed to be possible". Ultimately, though, Lipp seemed to conclude cautiously that he did not consider most reported UFO events as described to be evidence of such visits because they made "no logical sense".

RAND's ET Statements

In 1964, Stephen H. Dole, a scientist at the RAND Corporation, authored the intriguingly titled *Habitable Planets for Man*. Based on his analysis while at RAND, Dole believed that the existence of extraterrestrial intelligence was an extremely high possibility, even probable. In other reports, he estimated the number of

life-bearing planets (based on available information at the time) at 640 million!

It appears that RAND not only analysed the UFO problem but also evaluated the larger cosmological issues of our place in the universe, the likelihood of extraterrestrials and how to determine and quantify the extent of off-Earth life.

RAND UFO Report Released

RAND analyst George Kocher wrote an assessment report, dated 27 November 1968, entitled "UFOs: What to Do?". Kocher's paper was stamped "For RAND Use Only". It further instructs on its cover page, "Do not quote or cite in external RAND publications or correspondence".

Though the paper has been known about by the UFO research community for some years, it was only in 2000 that RAND was forced to acknowledge officially the paper's existence and authenticity. Today, RAND counters that it was an "internal document" that was never formally considered. It is easy to understand why RAND would want us to think that this is the case.

From an introduction to this report on RAND's website, we learn: "Since World War II...there seems to have been a drastic increase in sightings. We have enough data—both visual and photographic—on some of these sighting[s] to know that the phenomenon is unambiguously extraordinary and clearly inexplicable in modern terms." Chapters in the previously restricted document include "UFOs: Historical Aspects", "UFOs: Astronomical Aspects", "UFOs: Phenomenological Aspects" and its conclusion, "UFOs: How to Proceed and Why". A PDF of the document is accessible via <http://tinyurl.com/8x86n7c>.

We know, based on the previously mentioned 1948 Air Force document, that RAND was engaged in official research. In 1968, two decades on, RAND was still engaged in such analysis. And it likely continues this work today.

RAND and UFOs Today: Keeping It All in the Family

As of November 2011, RAND's President and CEO is Michael D. Rich, formerly Vice President of RAND's National Security Research Division. A family man, Rich has a very telling family history. His father was aviation genius Benjamin R. Rich. Ben Rich helped to

Rich also told associate Jim Goodall: "We have things at Area 51 that you and the best minds in the world won't even be able to conceive that we have for the next 30 to 40 years..."

lead aerospace giant Lockheed Martin as President of Lockheed Advanced Aeronautics. He oversaw the ultra-secret Lockheed "Skunk Works" division where he spearheaded the development of the Stealth fighter and bomber. Rich Sr is universally acknowledged as "the father of Stealth technology".

Ben Rich stated some extremely revealing things about the reality and nature of UFOs before he passed. In a letter to his friend and associate John Andrews, he replied to Andrews's observations about the UFO phenomenon. Andrews had written a letter to Rich, dated 10 July 1986, in which he said: "I believe with *certainty* in manmade UFOs. I am *tending* to believe there are also extraterrestrial UFOs." Rich, in a handwritten letter of 21 July 1986, replied to Andrews: "Yes, I'm a believer in both categories."

Andrews was a forensic illustrator and an aviation model-maker. According to Roswell researcher Bill McDonald, Andrews related that Rich went further in privately explaining: "There are two types of UFOs: the ones we build and the ones *they* build." Rich told Andrews of his concern that the public should not be told. But later, soon before his death in 1995, Rich said to Andrews that he had recently changed his mind on this and that "the 'international corporate board of directors' dealing with the 'subject' could represent a bigger problem to citizens' personal freedoms under the United States Constitution than the presence of offworld visitors themselves". Andrews said that Rich confirmed to him that "an item" had been recovered at the 1947 crash at Roswell.

Rich also told associate Jim Goodall: "We have things at Area 51 that you and the best minds in the world won't even be able to conceive that we have for the next 30 to 40 years..."

In fact, Rich gave numerous clues and hints about the alien reality to several people before he passed.

Ben Rich, the father of Stealth who was also the father of RAND's new CEO, gave his gift to truth and history before he died. He confirmed official government study of the UFO reality and the crash of an extraterrestrial vehicle to Earth.

The RAND-Battelle Connection and UFOs

Prior articles by this author (available on the UFO Iconoclasts website and in the book *Witness to Roswell*) have shown that, like RAND, Battelle Memorial Institute was heavily engaged by government to study UFOs. It now appears that Battelle metallurgists likely analysed the Roswell memory metal retrieved from the 1947 crash. That conclusion is drawn from a "reverse

engineering of information" of the literature on shape recovery metal, by the revealing statements of two US Generals, through the confession of analysis by a senior Battelle scientist and by establishing other connections.

But perhaps the most interesting of these telling connections is this: Clyde E. Williams, the Director of Battelle at the time of the Roswell crash, simultaneously sat on the Board of Trustees of the RAND Corporation! Williams directed RAND and Battelle activities at a time when both organisations were highly engaged in UFO study. Clyde Williams was installed as a Trustee of RAND in 1948 (the year after Roswell) and until 1963 he remained a RAND Trustee. Battelle is also known to have supported analysis of UFO sightings for the Air Force's Project *Blue Book* during Williams's tenure.

A President's Warning

The line between "public" and "private" sectors is blurred when it comes to "things UFO". Such fuzzy, "quasi-public" organisations were of grave concern to a wise President and military icon. Dwight D. Eisenhower was instructive in his January 1961 farewell to the nation. He warned that we should beware of the unchecked powers of the "military-industrial complex". And the Five-Star General was right. For it is in complexes like Battelle and RAND that the alien truth resides, unchecked. Until now. ∞

Williams directed RAND and Battelle activities at a time when both organisations were highly engaged in UFO study.

About the Author:

Anthony Bragalia has long researched the UFO phenomenon. His special area of interest and expertise is in deep historical analysis and in the investigation of the reported crash of a flying saucer near Roswell, New Mexico, in 1947. Mr Bragalia's articles are carried on numerous websites throughout the world and they are originally published on UFO Iconoclasts and on The Bragalia Files websites on a regular basis. His discoveries and findings have also been reported in the second edition of the bestseller *Witness to Roswell* by Tom Carey and Don Schmitt. Mr Bragalia has also collaborated on investigations and research with several authors including Kevin Randle and Nick Redfern. He can be contacted via <http://bragalia.blogspot.com>.

Editor's Note:

Anthony Bragalia's article was originally posted by RRRGroup on 27 July 2009 at UFOCon.Blogspot.com (see <http://tinyurl.com/loedfe>). It has been edited and slightly updated for publication in NEXUS.

UFO Propulsion Dynamics

GRAVITATIONAL MANIPULATION OF DOMED CRAFT

by Paul Potter

This book introduces a brand new field of scientific research based upon analysis of artifacts retrieved from crashed and damaged UFOs that have come down in Russia and America. For the first time, it reveals the scientific principles behind UFO propulsion dynamics, and shows that these principles are known and recognized by today's physicists. Potter's analyses of these UFO mechanisms are substantiated with references to a broad array of over 300 research papers published in scientific journals! Potter correlates many of the phenomena observed firsthand by close encounter witnesses and abductees and pinpoints the common themes reported, categorizing them according to known physical principles.

GERMANI

...was the name given to the tribes that sacked Rome. Now, in a new book *The Genesis Grid*, evidence is shown that outside powers have set a program controlling events on planet earth, involving the modern nation of Germany. A newly discovered structure to the book of *Genesis* involving *pi*, *critiqued by academics* and discussed in in-depth radio interviews, proves that the world will soon fall into an abyss of ruin and war to dwarf WW2.

THE TRUTH ABOUT HAIR

Reported by Cee Young

In the early 1990s, Sally (her name has been changed to protect her privacy) was married to a licensed psychologist who worked at a Virginia medical hospital. He worked with combat veterans with post-traumatic stress disorder. Most of them had served in Vietnam.

Sally said: "I remember clearly an evening when he came back to our apartment on Doctors' Circle carrying a thick official-looking folder in his hands. Inside were hundreds of pages of certain classified studies commissioned by the government. He was in shock from the contents.

"What he read in those documents completely changed his life. From that moment on, my conservative middle-of-the-road husband grew his hair and beard and never cut them again. What is more, the Virginia medical centre let him do it, and other very conservative men on the staff followed his example. As I read the documents, I learned why.

"It seems that during the Vietnam

War, special forces in the war department had sent undercover experts to comb American Indian reservations looking for talented scouts, for tough young men trained to move stealthily through rough terrain. They were especially looking for men with outstanding, almost supernatural, tracking abilities. Before being approached, these carefully selected men were extensively documented as experts in tracking and survival.

"With the usual enticements, the well-proven smooth phrases used to enrol new recruits, some of these Indian trackers were then enlisted. Once enlisted, an amazing thing happened. Whatever talents and skills they had possessed on the reservation seemed to disappear mysteriously, as recruit after recruit failed to perform as expected in the field.

"Serious casualties and failures of performance led the government to contract expensive testing of these recruits, and this is what was found.

"When questioned about their failure to perform as expected, the older recruits replied consistently that when they received their required

military haircuts, they could no longer 'sense' the enemy, they could no longer access a 'sixth sense', their 'intuition' no longer was reliable, and they couldn't 'read' subtle signs as well [as they used to do] or access subtle extrasensory information.

"So the testing institute recruited more Indian trackers, let them keep their long hair and tested them in multiple areas. Then they would pair two men together who had received the same scores on all the tests. They would let one man in the pair keep his hair long, and gave the other man a military haircut. Then the two men retook the tests.

"Time after time, the man with long hair kept making high scores. Time after time, the man with the short hair failed the tests in which he had previously scored high scores."

THE TWILIGHT ZONE

CHINA'S "AREA 51"?

by Haisheng Liu for Viewzone.com

I was asked to translate a recent submission to Viewzone that contains images taken using the Google Earth program.

Of course, I checked the archives to be sure they are correct and noted the GPS coordinates, so anyone can confirm that these things are real.

This is what we were told in the email:

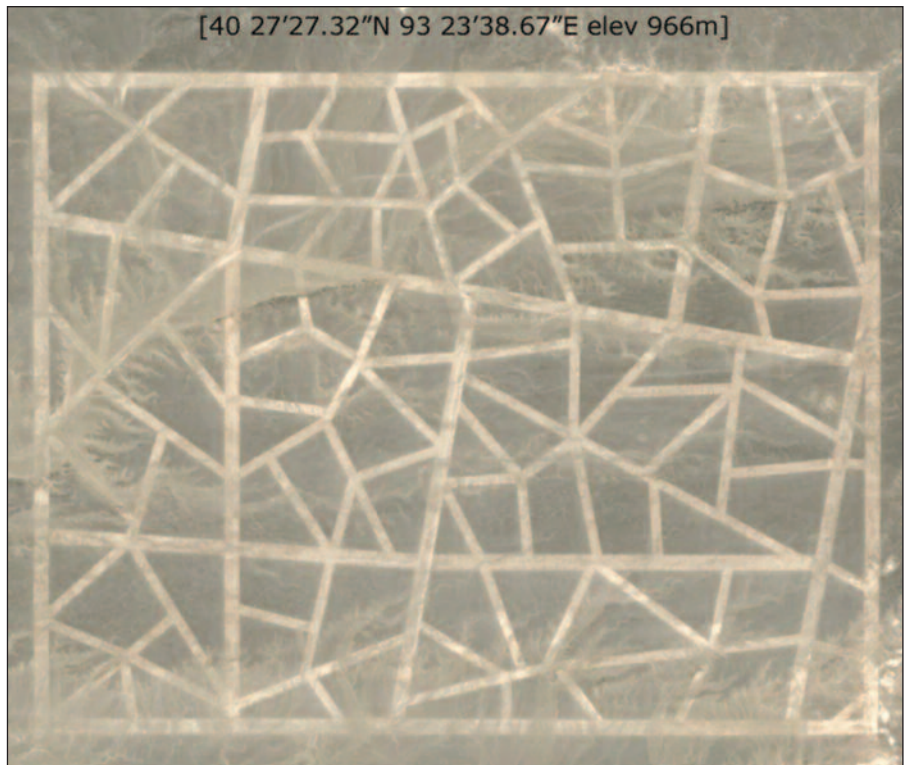

- The sender said that this is a Top Secret area in a remote part of China.
- This is the Chinese "Area 51" where captured (alien?) technology is kept and tested.
- It is also nearby the site where nuclear bombs were detonated many years ago.
- Supposedly the main laboratories are underground. You can see the entrances if you zoom in on the images.
- Contact has been made with "other technology"(?).
- A new propulsion system was being tested, but it was not well controlled and could not be stabilised.
- An accident happened and the device blew up.
- The area is very contaminated.

(Source: Extracted and edited from the original information posted in 2011 at www.viewzone.com/china51.html.)

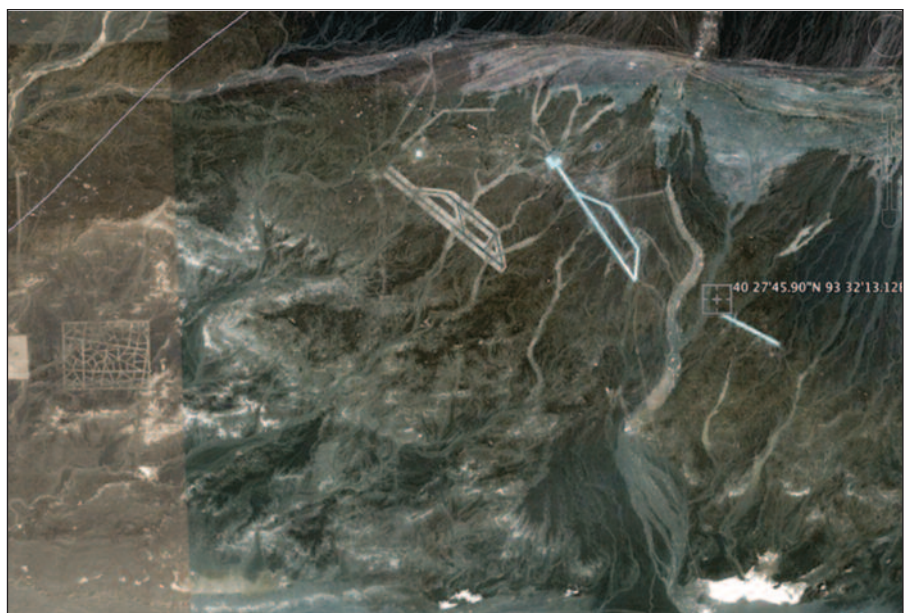

Coordinates of interest:

40° 24' 17.50" N, 93° 38' 15.75" E
40° 24' 49.38" N, 93° 35' 02.06" E
40° 27' 08.26" N, 93° 44' 24.07" E
40° 27' 27.32" N, 93° 23' 38.67" E
40° 29' 15.51" N, 93° 27' 30.06" E
40° 27' 45.90" N, 93° 32' 13.12" E
44° 42' 40.81" N, 93° 31' 46.18" E

Editor's Note: We encourage readers to visit Viewzone.com to read the full information and view all the images provided there. Space did not allow us to reproduce everything.

The top of this unusual rectangular construction spans 5,670 feet (~1,728.2 metres) and the road-like structures are as much as 100 feet (~30.5 metres) wide. Google Earth images show the construction at various times going back to 2005. The construction is always covered with mud, and the surrounding land shows no signs of activity for miles. Prior to 2005, the Google Earth images are blurred in this specific area, suggesting it is not new.

If you zoom in on some of the remains of buildings and camps, you will see that they look vacated and ransacked. There's a sign of an explosion in places with the ground riddled with 10-foot craters, as if cluster-bombed.

The remote site even has a “HAARP-like” installation (see coordinates 40° 24' 17.50" N, 93° 38' 15.75" E).

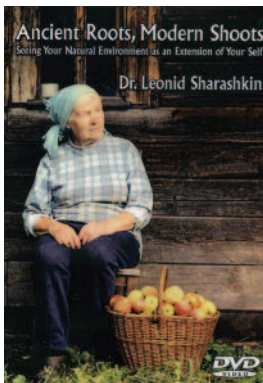

There certainly is strong evidence that something came from “above” and blasted this site (and most others in the area).

Images at right: Orange blocks, as big as cargo containers, are stacked in a circular manner around a small house. Then, some time after 2007, there is a powerful explosion and the containers are scattered as far as three miles (nearly five kilometres) from their original site.

OVERTHROWING THE TEMPLE by Martin J. Walker

Slingshot Publications, London, 2011,
www.slingshotpublications.com
ISBN 978-0-9564093-0-0 (185pp tpb)
Available: NEXUS UK Office, tel +44
(0)1342 322854

It's ironic that Loïc Le Ribault should start his academic career by studying sand grains and then spend his latter years producing a form of organic silica to treat health problems such as arthritis and skin disorders. He set up his own forensic laboratory and earned a brilliant reputation as an investigator and trainer with the French police until he was forced out by the top brass.

Investigative author Martin Walker got to know Le Ribault in 1998 when he was in exile and was producing and marketing his organic silica. However, Loïc was imprisoned twice for his efforts, having displeased certain vested interests. (We ran Walker's two-part article in 12/03–04, and reviewed Le Ribault's book *The Cost of a Discovery* in 12/05.) Walker last saw Le Ribault in 2005, a year before he was diagnosed with cancer. Sadly, Loïc died in 2007 in hospital under

suspicious circumstances.

In *Overthrowing the Temple*, Walker recaps Le Ribault's story and reflects on a life dedicated to helping others. He also reprints some of Loïc's short stories and writings about his ordeals in recent years. This is a touching tribute to a scientist ahead of his time and a courageous man who fought state-sponsored persecution.

THE CHIEF SEA LION'S INHERITANCE

by Tom Blaney

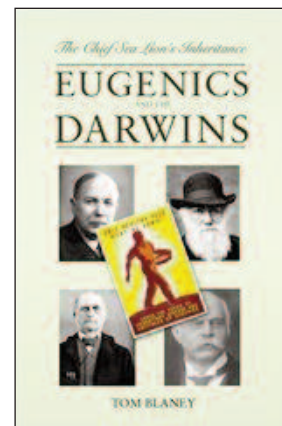

Matador/Troubador Publishing,
Leicester, UK, 2011
ISBN 978-1-848766-211 (173pp tpb)

Avail: www.troubador.co.uk/matador

Key members of six generations of the Darwin family are scrutinised in this perspective that considers what few have acknowledged: that at least three generations participated in the eugenics movement. The period that physicist Dr Tom Blaney focuses on begins with "the father of evolution" Charles Darwin and ends with one of his grandsons, Charles Galton Darwin (CGD), known from middle age as "the Chief Sea Lion"—inspiration for the book's title.

Not only does Dr Blaney provide a fascinating potted history of the Darwin family—including the many gifted women born or married into

it—he relates their contributions within the context of the times. In the 1950s until his death in 1962, CGD headed the British eugenics movement but was still steeped in class-based mid-Victorian traditionalism. This helps to explain why the movement never had much momentum in an increasingly democratic, social welfare-oriented society. Ideas like paying wealthier people to have more children and dispensing with the "feeble-minded" didn't cut it, and yet much more extreme positions had already taken root in US legislation before World War I and with the Nazi atrocities in World War II. These ideas have not gone away, says Dr Blaney, and new technologies are bringing a brave new world closer. A compelling read.

BURRUNJOR!

The Search for Australia's
Living Tyrannosaurus.

Rex and Heather Gilroy

"BURRUNJOR! AUSTRALIA'S LIVING TYRANNOSAURUS".

Hot on the heels of our latest book release "BIG Cats of the Australian Wilderness", Heather and I are pleased to announce that our next book "Burrunjor – Australia's Living Tyrannosaurus" is now ready for release.

This sensational book concerns the infamous Tyrannosaurid giant reptilian monster of Australian Aboriginal folklore. The book is filled with often terrifying tales of encounters with these reptilian nightmares, both by Aboriginal people and Europeans.

A case for their sudden appearance and disappearance without trace being due to "Time-Windows" is presented, along with recently made foot impressions of these reptiles, including plaster cast examples from the recent South Australian finds of the Gilroys and Greg Foster, as well as fresh tracks found in Kanangra Boyd wilderness and Wollemi National Park, location of the mysterious 'Dinosaur Swamplands' where claims of eerie encounters with these monsters from another age have occurred.

This book will be a 'must' for all Cryptozoologists interested in the 'living dinosaurs' theory. 'TEAM GILROY' are searching for an interested man or woman assistant interested in bushwalking and living in the Sydney/Blue Mountains area to assist Rex and Heather Gilroy in their exciting searches and discoveries of pyramids and megalithic ruins of Australia's Lost Civilisation of Uru? The team have discovered relics and rock inscriptions of maritime cultures and engaged in the search for the 'Yowie' and mystery animals. **Interested??** We would like to hear from you at 02 47823441 or email us at randhgilroy44@bigpond.com.

REVIEWS

THE HIDDEN GEOMETRY OF FLOWERS

by Keith Critchlow

Floris Books, Edinburgh, UK, 2011
ISBN 978-086315-806-3 (447pp 1/f tpb)
Available: www.florisbooks.co.uk

In the quest to reconnect with the natural world, we need go no further than appreciating flowers for the beauty and hidden geometry that they encompass. In his elegantly presented large-format book, Prof. Keith Critchlow includes over 500 breathtaking colour photographs, illustrations and hand drawings to go with his engaging text. The foreword is by HRH The Prince of Wales, who waxes lyrically about the beauty of Nature and the Divine Order and has made his garden at Highgrove available for Critchlow's use.

Prof. Critchlow examines flowers from four perspectives: the material level or the bodily flower, seed, leaf or plant; the social or psychological level, covering how flowers affect us both in actuality and symbolically; the cultural and mythological level, reflecting the significance afforded to flowers and plants by various cultures through the ages; and the inspirational level, which invites us into a more subtle level of seeing, understanding and being.

To Prof. Critchlow, flowers are

teachers of symmetry and geometry and they remind us of our deepest memories of wholeness. Indeed, they can connect us with the universal oneness. Beauty is the language of flowers, and Critchlow helps entice us into their unfolding, spiralling domains to discover a higher realm of contemplation. Beauty really is truth, as this magnificent work shows.

THE WHALE WHISPERER: Healing Messages from the Animal Kingdom to Help Mankind and the Planet

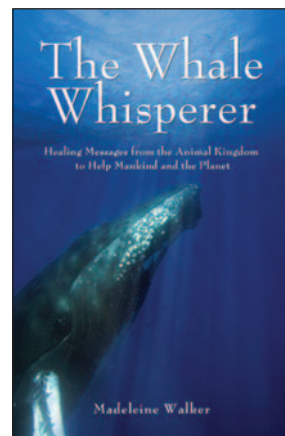

by Madeleine Walker

Findhorn Press, Forres, UK, 2010
ISBN 978-1-84409-537-7 (219 pp tpb)
Available: www.findhornpress.com

British intuitive Madeleine Walker has always had a special affinity with animals, but it took a trip to Egypt and a reconnection with the goddess Hathor and the sacred lions of the temple to acknowledge her spiritual path and her gift for animal communication and psychic healing. Walker is the author of *An Exchange of Love*, and here she touches on some of the heartfelt stories in that book; for example, the time that she helped both horse and rider connect with their incarnations together in antiquity and heal the physical and emotional wounds that they suffered.

Walker's new book *The Whale*

Whisperer is so named because, of all the incredible messages, advice and wisdom she's received from our animal friends, the communications from a whale have been the most profound. And that's saying something, because her favourite dog (which appeared to her in Egypt) as well as wild species like the white buffalo, orca, bear, whale shark, elephant, white lion and seal have told her telepathically that we need to live with love and respect for life and our planet. The animals know that a crisis is upon us and are trying to work with us to help save humans and the natural world. Walker walks (and swims) the talk in her uplifting book that has inspiring messages for us all. (See the review of Walker's CD *Whale Whispers, Lion Roars* in 18/05.)

REVIEWS

THE LOST EMPIRE OF ATLANTIS

by Gavin Menzies

Swordfish, London, 2011

ISBN 978-0-8578-2005-1 (374pp hc)

Available: www.orionbooks.co.uk

It was only after the publication of his book 1421: *The Year China Discovered the World* that Gavin Menzies realised that the Chinese were *not* the first navigators of the globe. He then delayed the completion of his book about Chinese voyages to the Americas to focus on the Minoan civilisation, which, according to one of his mentors, Professor Stylianos Alexiou, engaged in maritime trade with Egypt from 1991 to 1400 BC.

Menzies, a former Royal Navy submarine commander, concludes that the Minoans, with their main bases on Crete and the nearby island of Thera, also traded with Africa, Mesopotamia, Britain and Ireland, Western Europe, North America and India. The Minoans gained much of their wealth by obtaining copper from Lake Superior in North America and combining it with tin from Cornwall and elsewhere to make bronze. They had advanced shipbuilding and navigational techniques which made their long voyages possible; they may have had a hand in building or at least modifying the megaliths of the Mediterranean and Atlantic regions;

and they may have invented writing, as portrayed on the famous Phaestos Disc. Considering archaeological and DNA evidence, Menzies reckons that the Minoans' reach qualifies their civilisation as an empire—but one that met its demise c. 1450 BC with the catastrophic volcanic eruption of Thera and the subsequent destructive tsunami. Menzies is convinced that Thera's geography fits well with Plato's description of Atlantis and its destruction. An engrossing study.

THE MASTER GAME

by Graham Hancock & Robert Bauval

The Disinformation Co. Ltd, NY, 2011

ISBN 978-1-934708-64-4 (636pp pb)

Available: www.disinfo.com

In their latest collaboration, Graham Hancock and Robert Bauval trace the age-old knowledge that has been nurtured by priests and adepts through the millennia and question what has become of it in recent decades. They have the Freemasons in their sights for their role in both the American and French Revolutions and in influencing the Egyptian-inspired symbolism and architecture of Paris, Washington, DC, and other cities. But can the Freemasons be equated with Zionists, as the authors fear is intrinsic to the Muslim world view, sparked by the publication in

the early 20th century of the infamous and discredited "Protocols of the Elders of Zion"?

Hancock and Bauval suggest that a secret religion has shaped the world through the ages, and with the French Revolution it was out to supplant Christianity with a different Supreme Being notion in harmony with Freemasonry. But since World War II, there's been a war between cultures which see the world through different eyes. The authors reflect on the behind-the-scenes machinations that led to America's support for the creation of Israel while denying the rights of the Palestinians living in that land, and on a different timeline than that which was envisaged by vested interests. They lift the veil on a world that is hidden in plain sight.

REVIEWS

SUNSCREENS – BIOHAZARD

by Elizabeth Plourde, PhD

New Voice Publications, CA, 2012
ISBN 978-0-96617358-1 (333pp, tpb)

Available: www.nvpub.net

Be wary of plastering yourself with sunscreen: not only may it be ineffective in filtering out UVA and UVB rays, it may be carcinogenic and also cause irreparable damage to aquatic environments. Medical researcher and clinical laboratory scientist Elizabeth Plourde, PhD, has over 25 years' experience in medical research including in cancer, genetics and endocrinology. In *Sunscreens – Biohazard*, inspired by a trip to sun-soaked Hawaii and her reaction to bleached corals, she brings her scientific knowledge to bear on just how disruptive the chemicals in sunscreens really are. Many sunscreens now incorporate nanoparticle forms of the metallic zinc oxide and titanium dioxide as surface screens, yet the particulates allow for the absorption of even more UVA rays and also present a real danger to aquatic creatures by disrupting the entire local ecology.

It's alarming that rates of various types of skin cancer are on the rise, despite education campaigns and the vastly increased uptake of sunscreen preparations. The endocrine-disrupting chemicals that make up these sunscreens can play havoc with cell division and cause cancer, chronic illnesses, autism and other

neurological problems. Not only that, they can prevent the uptake of vitamin D, which is essential to our health and is best absorbed through sunscreen-free sunlight exposure in short bursts at the right time of day.

Dr Plourde is to be applauded for her important book that regards sunscreens as hazardous waste.

THE BOND

by Lynne McTaggart

Hay House, London, 2011

ISBN 978-1-84850-478-3 (313pp tpb)

Available: www.hayhouse.co.uk

The competitive, individualistic mindset that has seeped into society since the Age of Enlightenment and the Scientific and the Industrial Revolutions is to blame for the crisis before us now. It's time for us to adopt a mindset of cooperation and caring if we're going to survive and prosper. This is the essence of *The Bond*, the new book by paradigm-changing author Lynne McTaggart (*The Intention Experiment*, 14/04; *The Field*, 8/05), who has looked into enough frontier science to know that "all of life exists in a dynamic relationship of cooperation".

Despite what some psychologists would tell us, we are not hardwired for competitiveness. Our most fundamental state of being is a drive for cooperation, partnership and sharing. McTaggart explains that, just as with subatomic particles, the key to life is "the space in between"—"the inseparable, irreducible Bond" which connects and unites us all.

Of course, myriad people around the planet have already made this connection and adopted an holistic view and way of life. McTaggart encourages an expansion of this new paradigm where we put aside differences, surrender to wholeness, relate to each other with kindness on a deeper level and find the soul of our community, the neighbourhood we didn't realise we had. She gives many inspiring examples of this awakening being put into action, with great hope for the future.

REVIEWS

DEEP TRUTH

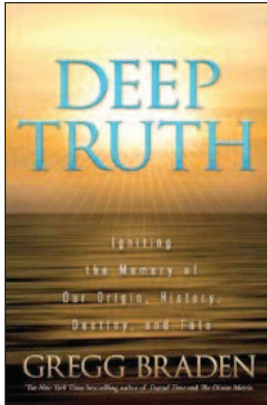

by Gregg Braden

Hay House, London, 2011

ISBN 978-1-84850-318-2 (293pp pb)

Available: www.hayhouse.co.uk;

www.hayhouse.com.au

If we're going to solve our crises, we have to come to terms with who we are—and this means acknowledging that science and society have been operating according to false assumptions. In *Deep Truth*, visionary scientist Gregg Braden (*The Divine Matrix*, 14/05) highlights the findings that could change our perception of ourselves but are yet to filter into mainstream consciousness. We're at a tipping point, where working in cooperation as a species and reconnecting with the natural world will make the difference between a glorious future and a dark fate. This tipping point may be imminent, and we may not have enough time left in which to integrate these findings into our way of thinking.

Braden identifies six "deep truths" that we must act on now. We must do away with false beliefs about our origins; change our educational systems to explore new theories and discoveries; build partnerships that can help us adapt and survive as a species; learn from the ancient civilisations and their time cycles; appreciate that humankind reflects a design put into place at once, rather than through evolutionary process; and affirm that we are not "wired" for war, as the last 5,000 years of our history largely would suggest.

Braden urges us to marry the best of science with the wisdom of the ages if we're to shift crisis into emergence and create a new world based on sustainable principles informed by the deepest truths.

BIG CATS OF THE AUSTRALIAN WILDERNESS

by Rex and Heather Gilroy

URU Publications, Katoomba, 2011

ISBN 978-0-9578716-9-4 (345pp l/f)

Available: www.rexgilroy.com

Stories of big cats having escaped circuses in the late 19th century or been released from their mascot duties after World War II, only to flourish in the Australian bush, do not account for the numerous, widely dispersed sightings of mysterious felid creatures. Cryptozoology researcher Rex Gilroy and his wife Heather have written about these big cats before (see *Mysterious Australia* and *NEXUS* 2/08, 14/01). Their territory takes in the vast and rugged Blue Mountains, New England and Kangaroo Valley regions of New South Wales as well as parts of Queensland and Western Australia.

With decades of field research to inform them, the Gilroys argue that the big cats are more than one species of native marsupial carnivore, descendants of one that lived at the end of the last ice age. The most likely original animal is the *Thylacoleo carnifex oweni*, or the marsupial mountain lion, whose progeny can have colourations varying from light brown to black and proportions from feral cat sized to very large. The so-called black panthers sighted in the bush are just one type of marsupial lion descendant, they believe.

The Gilroys take us on a rollicking ride through often unforgiving landscapes, interspersing their text with historical and recent eyewitness accounts as well as numerous black and white photographs. Their coverage is up to date, proving that the enigma is still alive and well—and awaiting more discovery.

Are You Prepared To Put The Current And Future Health Of Yourself And Family At Risk?

Nikola Tesla

PRODIGAL GENIUS The Life of Nikola Tesla

by John J. O'Neill

This is a definitive biography of the man without whom modern civilization would not exist. It contains many rare photographs of Tesla and his most advanced inventions. Tesla could see an invention in 3-D, from every angle, within his mind, before it was built • how he refused to accept the Nobel Prize • why Tesla clung to his theories of electricity in the face of opposition • his friendships with Mark Twain, George Westinghouse and competition with Thomas Edison.

THE RETURN OF THE REBEL ANGELS

by Timothy Wyllie

Bear & Company, Rochester, VT, 2011
ISBN 978-1-59143-125-1 (461pp tpb)
Available: Bear & Company,
www.BearandCompanyBooks.com

Planet Earth is soon to be transformed, and along with it our consciousness. While we may have to endure traumatic changes as the planet rebalances itself, our spiritual transition will be gentle, according to one of Timothy Wyllie's angelic guides. Wyllie is a writer, artist and musician who has been tapping into non-human intelligences—angels, dolphins, ETs—since the early 1970s and taking on board and spreading their messages for humanity.

Wyllie is particularly inspired by the famous *Urantia Book* which says that, 200 millennia ago, 37 planets, ours included, were quarantined to prevent the spread of the Lucifer rebellion within the angelic hierarchy. He considers the effect that this had on our planet and provides a timely update: that the quarantine has been lifted, that the fallen angels have been forgiven, and that the Earth and humanity are being reconnected to our spiritual heritage within the multiverse.

In his mind-expanding work, *The Return of the Rebel Angels*, Wyllie recounts his tales of out-of-body travels, reincarnation, healing and "re-enchanting" the sacred landscape. He rediscovers ancient oracles and

explains how negative thought-forms become realised. He enlightens us on working with nature spirits, the return of Quetzalcoatl of the Toltecs and Aztecs, the frequency domains of the holographic multiverse, and the pervasiveness of love in the cosmos. He also presents eight examples of his amazing artwork as colour plates.

As humans, our "ascension" potential is our birthright, and Wyllie proclaims that we're all "doomed to become perfect". Way to go!

HOW WALL STREET FLEECES AMERICA

by Stephen Lendman

Clarity Press, Inc., Atlanta, GA, 2011
ISBN 978-0-9833539-4-2 (190pp tpb)
Available: www.claritypress.com

If ever a text could shed light on the "Occupy ..." movement, this is it. Written by author and broadcaster Stephen Lendman, MBA, *How Wall Street Fleeces America* is a well-researched study that tells it like it is on such subjects as the dark legacy of the Federal Reserve and its titular heads, how markets are manipulated and how home-buyers and students become enslaved in debt bondage.

Lendman delivers a brief history of how the anti-constitutional, privately run Federal Reserve was established in 1913, gives an eye-opening rundown on government bailouts of and handouts to corporate bankers and other corporate favourites, slams Greenspan and Bernanke's irrational economic edicts and questions the wisdom of quantitative easing. He also shows how class warfare is threatening US workers' security—a harsh awakening for those who trusted the system. The recession may be over, but a new depression is only just beginning, with the US in deep debt crisis and disintegration.

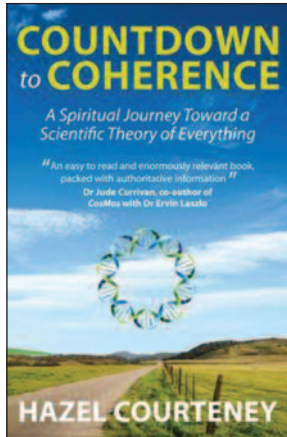

While the reality is that the people have been duped big time, all is not yet lost. Lendman bares all on the Federal Reserve Abolition Act and promotes workable alternative systems such as public banking, "an idea whose time has come".

REVIEWS

COUNTDOWN TO COHERENCE by Hazel Courteney

Watkins Publishing, London, 2010
ISBN 978-1-906787-83-7 (280pp 2011)
Avail: www.watkinspublishing.co.uk

British author Hazel Courteney is well credentialed as a health journalist in print and on cable TV, a process she began in the early 1980s when she discovered nutritional medicine and alternative therapies in a bid to turn around her own brushes with chronic illness. A powerful near-death experience (NDE) in 1998 led her to explore spiritual, psychic and paranormal subjects and write *Divine Intervention* (2000) and its sequel, *The Evidence for the Sixth Sense* (2005).

In her new "spiritual science" book, *Countdown to Coherence*, Courteney passes on the benefit of knowledge that she accessed from scientists, shamans and seers in her quest to make sense of her NDE and try to reconnect with the profound cosmic link that it kindled in her for a time.

Among the mentors on her journey are physicist Prof. William Tiller, scientist/parapsychologist Dr Serena Roney-Dougal, psychologist/NDE researcher Prof. Gary Schwartz, retired physicist/orbs investigator Dr Klaus Heinemann, shaman/medical anthropologist Dr Alberto Villoldo, and Falco, the visionary founder of the Damanhur spiritual community in Italy. Courteney also refers to the findings of many other frontier researchers. Key to her discoveries is that we need to find a path towards

coherence at all levels—mind, body and spirit—but that this is a process, not a race. She says there's no substitute for experience: the more aware you are of what to expect, the easier your unique countdown to coherence will be and your powers within will begin to manifest. There's a wealth of wisdom in these pages.

THE KAHUNA KIT

by Joe Potts

AuthorHouse, Bloomington, IN, 2011
ISBN 978-1-4567-8687-8 (186pp tpb)
Available: www.authorhouse.com

The Kahuna system of knowledge would have to be the most brilliantly simple, workable and powerful system there is. So I was delighted to find that Kahuna magic from the Hawaiians (with Egyptian aspects), as investigated by the pioneering anthropologist/linguist/psychic researcher Max Freedom Long for decades from 1917, has been explored anew. Philosopher and writer Joe Potts was so inspired by discovering this knowledge that he became a healer, one with a vital message for humanity. The Kahuna science is as applicable for us now as it was when it guided the lives of indigenous people exclusively.

The Kahuna Kit is designed as a workshop, with practical physical and mental exercises to explore and apply based on the key elements: that we have three souls, three soul bodies and three variant vital-force energies plus a human body to house it all—10 in total. The totality encompasses the unconscious mind or Low Self, the conscious mind or Middle Self, and the superconscious mind or High Self—the Aumakua, God Within—which in turn links up with the Great Company of High Selves. Accessing and working with these aspects of Self requires discipline and ethical awareness, and Potts, with unconventional good humour, provides golden nuggets to nudge us on our path. His book should also inspire readers to look into Long's outstanding body of work.

DVDs

Compiled by Ruth Parnell

THE COMPLETE NATIONAL GEOGRAPHIC – 2010 Edition

by National Geographic Society © (6-DVD-ROM set or external HD; requires Mac OS X v 10.4 or later, or Windows 7/Vista/XP/2300) Avail: www.nationalgeographic.com

One of the world's most iconic magazines, *National Geographic*, is available as a complete collection on DVD-ROM. The boxed set includes every issue from 1888 to 2010, over 1,400 in all, including full articles, digitally reproduced high-res photos (over 200,000), maps, diagrams and adverts. It's aided by the GeoBrowse tool that allows you to search nearly 5,000 locations for articles/photos/maps included on the DVDs, so you need an Internet link to activate this feature and others. You can browse issues and pages, zoom and scroll, refine your searches by date, content, etc., create archives, and print. The DVDs are not compatible with movie players, though. The set includes a bonus DVD book, *High Adventure: The Story of the National Geographic Society*.

This collection is a must for your library and is an ideal gift for anyone who appreciates nature and culture.

ANCIENT ALIENS

Seasons One, Two and Three

produced by Prometheus Entertainment © 2009–2011 (Season One: 3 DVDs, 470mins; Season Two: 3 DVDs, 470mins; Season Three: 4 DVDs, 800mins) Available: www.amazon.com

In the pilot episode of *Ancient Aliens*, broadcast on the History Channel in March 2009, *Chariots of the Gods?* author Erich von Däniken reaffirms evidence for intelligent beings having visited Earth thousands of years ago with their advanced technology, assisting in the course of human development. The History Channel ran two seasons of the series in 2010, and is currently screening the 14-episode third series. Boxed DVD sets are now available to

add to your audiovisual collection.

Season One's programs cover descriptions of alien activity in ancient texts, alien visitations among tribal people, the ET mission plan for Earth and mankind, historical close encounters and recent contacts.

Season Two considers mysterious places, gods and aliens, underwater and underground worlds, Third Reich experiments with ET technology, rediscovered advanced weaponry, angelic apparitions, anomalous megalithic structures (Göbekli Tepe and Carnac, for instance), disasters such as the Great Flood which may have been caused by aliens, and ET messages for humanity.

Season Three explores alien influences in the American Old West, sacred places and temples, strange rituals, plagues and epidemics, lost worlds, "divine" tools through history, evil places, deadly cults, and the world grid which connects the grand monuments of our ancient ancestors.

Amidst the stunning location photography there are interviews with key researchers on these ET-related subjects. David Hatcher Childress, Philip Coppens and Jim Marrs are a few names familiar to NEXUS readers.

While the series has attracted the usual criticism, it's well-produced, thought-provoking and inspiring.

EMF Meter!

It's so easy to use! Take Unlimited EMF (Electro Magnetic Field) readings at home, office, school – anywhere!

TWO VOICES

by Wouter Kellerman

Kellerman Music, SA, 2010 (57mins)

Distributors: **Australia**—The Planet Company, tel (02) 9283 8250; **South Africa**—Next Music, tel +27 (0)11 450 3643; www.wouterkellerman.com

Wouter Kellerman's new album *Two Voices* won the 2011 SAMA (South Africa's Grammy equivalent) for Best Instrumental Album, confirming his status as one of South Africa's foremost flautists. He thrives on experimenting with the textures and colours that his flute is capable of painting, and creatively blending other instrumental and vocal sounds. Magnificent, diverse flute playing.

STRANGER MUSIC

by Suns of Arqa

Arka Sound, 2011 (CD/DVD, 67mins ea)

Distributors: **UK**—Southern Record Distrib., tel +44 (0)20 8802 3000; **Europe**—EFA Music, tel +49 (0)40 789 1700; www.sunsofarqa.co.uk

Suns of Arqa has been in the world music scene since 1979 and played at the first Womad Music Festival in Shepton Mallet, England. Its creator and mentor Michael Wadada continues to investigate the etheric potential of the classical raga structure of Indian music, mixing these cerebral vibrations with Mother Earth rhythms of drumming in

electro-dub reggae style. On this treat of a CD/DVD, Suns of Arqa does an amazing reinterpretation of Leonard Cohen songs, melding its signature world beat, tight electronica and dub with some absolutely gorgeous vocals. Simply superb.

...AND LOVE RAGES ON!

by AOMusic

AOMusic Ltd, USA, 2011 (47mins)

Distributors: **USA**—Burnside Distribution Corp., tel +1 (503) 231 0876; <http://aomusic.com>; **Europe**—Silenzio Music, www.silenzio.de

AOMusic's *...and Love Rages On!* features children's choral ensembles from China, South Africa and Georgia. Filled with brilliant harmonic textures and rhythmic energy, these songs carry messages of rejuvenation for the spirit. It's a bouncy, cultural acoustic fusion of musical textures with a rhythmic, Celtic touch. Seamless, exhilarating dance music. (AOMusic donates proceeds from this release and three previous albums to children in Haiti.)

EARTHSONG & STARDANCE

by Gandalf

Real Music Records, 2011 (67mins)

Distributors: **Aust**—Brumby Books & Music, tel (03) 9761 5535; **Europe**—MCC, tel +49 4102 89 82 02; **USA**—Real Music, tel +1 (415) 331 8273, www.realmusic.com

With a name like his, Gandalf just has to produce beautiful Middle Earth-type music. *Earthsong & Stardance* breaks a contemplative streak, as Gandalf presents some of his most impressive recordings in years to mark his 30th anniversary in music. There is a significant transformation here, as the arrangements are embellished with orchestration, percussion and male choral arrangements, including a five-part performance by a tremendous, deep-voiced male choir giving a rendition of the Bhagavad Gita in Sanskrit. A stirring album which lifts the listener into other realms.

and Special Report Reveal...

"How to Meditate INSTANTLY!"

If you'd like to meditate as deeply (actually more deeply) than a Zen monk, literally at the touch of a button, this may be one of the most important messages you will ever read. Here is why...

Based in part on Nobel Prize-winning research on how "complex systems" (human beings, for instance) evolve to higher levels of functioning, a mental improvement program has been created utilising a powerful audio technology called Holosync®.

A precise combination of audio signals gives the brain a very specific stimulus that creates states of *deep* meditation — and causes the creation of new *mind-enhancing* neural connections between left and right brain hemispheres.

Now a New CD and Report Reveal ...

- The scientific evidence proving how Holosync® increases the production in the brain of many vital neuro-chemicals that can slow ageing.
- How to achieve super-deep meditation, at the touch of a button.
- How to dramatically reduce stress.
- How to create remarkable emotional changes at the deepest level.
- How to improve your emotional health.
- How to heighten your creativity and problem solving ability.
- How to have more restful sleep.
- How to boost your intelligence.
- How to increase your focus, concentration and learning ability.
- How to enhance your memory.
- How to increase your motivation and confidence.
- How to have more happiness and "flow" in your life.
- How to heal emotional blocks.

The complete report on this amazing new technology and Holosync® CD, worth \$37, are FREE to *Nexus* readers for a limited time.

THE FORCE THE THEORIES AND 'THY SELF'

A contribution of thought dedicated to Duncan M. Roads—a special friend of the Earth.
By Gunther K. H Pfrengle

If one were to ask what is a human being? One possible answer could be a passenger on the primary end product, a complex life sustaining planet in a solar system developed by a Creative Order. This traveler is a secondary final creation, a culmination from a microbial to a biological cell and cell chain progression over time, to the point where a creature evolved able to rise—to the prime question who am I? Followed by wise man's century old advice, get to know, thy-self. That is awake, use all your senses and experience yourself-but above all dwell into your inner 'self', to evaluate the results of the progressive interwoven causality within the same, from the first remembrance to the last days to understand this, 'thy-self'. Is this simply advice to guide and heal one self if one recognizes the need for it? For, a physician may not heal a patient if he does not identify the illness. Or is it to fit this 'self' into one of the many communities with all their different rules and regulations, (and believe) self conscientious instructed or solitary and free through (thy) self conscious evaluation? Is it to know and confirm ones 'self' and that this 'self' you, as a sane human being, is responsible to steer this 'self' you, your 'self' and the body it dwells in, across the 'treacherous oceans' in order to transfer this 'self' to some place very special that is, one's 'self' into an other dimension, the spirit world, God's domain? For 'He' said God is a spirit. Following the event of this, the 'prime question', these 'selves' at some point in time, are ready to take over from this evolutionary summit of this secondary creation (by the Creative Order) to either explore, understand, employ and enjoy the purpose of their being, if they except knowledge of the full truth and act up on it or ignorantly use this freedom, this power to unleash their own third stage 'creative order' in their common predatory fashion, leading to their doom. A question lingers are we taking enough care to get to know the total forces (good and evil) within our combined 'selves'. Understand the reason for the creation of this 'self' thy-self ,our 'selves' hence the contribution this 'self', your 'being' is bound to, in order to guard the primary and the secondary gift of the 'Creative Order' which is for our 'selves' (us).

GOD THE UNIVERSE AND THE 'SELF'.

By current scientific standards, the question is warranted, where is God to be found after the Big Crunch? And how, if 'He' as Spirit does not survive, how is everything reinstated anew after the Big Bang, by what force-the 'Creative Order', as system embedded within primeval mass (energy)? Like an equal to a genetic code helix-perhaps arising from within a lower dimension (U-2)? (See www.agspri.com.au). Stephen Hawking and some fellow scientist's offer a way to a solution, by proposing the existence of a multitude of adjoining bubble encased universes. God could be dwelling in them and ruling them and our Universe (U) when it is ready again. But if there is only one Universe, how is God to evolve out of such a Big Bang beginning from the size of a proton to the present state? This is one of the problems for which God's poem (see agspri.com.au) could provide enlightenment. The poem materialized between guidelines, intuition and a search within, one's 'self'. One has to expand the self in to its constituents to clarify it. This may seem odd! The body found its current perfection in the course of time in the secondary stage directed by the 'Creative Order', to be reinstated over and over again, through time, by pairs of beings who imprint their genetic inheritance on that body. But it is also their combined inner 'self' (the heart the strength of their souls) their souls, which provide a part of that 'self'- that new being. Properly instructed (programmed) by righteous parenting this will influence the mind, the 'self's' body control and equalizer (arbitrator) module between body and soul. The body would be instructed to act, principally, as according to the inherited dominants but the same may be altered by and within the 'one self-being'. Thus, the spirit (the embryo spirit) grows or fades through the acts of the threesome combinations causal inner adjustments. Every act that breaches the peace formulas; Treat your neighbor as you want him to treat you or as the Son said, 'love God with all your heart, soul, mind and strength and love your neighbor as yourself'. On this base of love, any negative act will cause a demise in the development of your spirit, the extension of the soul, the pass to God, the quintessence for—and of God. Abuse the growth of that spirit long and hard enough and it may not be strong enough to fulfill its designed destiny. If you are sensitive and thoughtful enough you can actually feel the damage you cause onto your 'self' with every bad deed (Refer to Socrates). In doubt? Consider the opposite. Why then do most people feel a happy elation when they do a good deed, to a total stranger? That's why the Teacher, who is said to be without sin, as an example for us spoke about the injured pilgrim lying by the side of the road. All this concerns, in a sense, the three 'W' questions (where do we come from, why are we here, where are we going?) the basics of timeless sophisticated philosophy to seek answers to our purpose. By examining our inner 'selves', we experience Him thereby His existence, our selves and why we evolved. Within this frame we may achieve self guidance in truth, hence more respect for each other.

End Note.

In all predictions of scientific thinking and in all advances there has to be a consideration for the Creator. After all we are using I 'His' building blocks and science which allowed us to emerge. Therefore in this respect we have only three options to come to terms with God and the Universe. For the 'Big Bang' theory, if there is no retreat into a lower dimension, there has to be a total recreation and that would have to include God (see God's poem). If that is not acceptable the multitude universe proposal (each bubble encased or string M-theory membrane divided) would be the best alternative. That leaves the disbanded 'Steady State Universe' as the third possibility and only the last two systems permit a rational understanding of true eternity concerning the spirit—the Holy Spirit. While time goes by, an inquisitive schoolboy would be smashing a grain of sand until the grain range reaches the limit of his microscope, a wise scientist may listen to the sounds categorize them mathematically compare and understand.

fight off the offender, and some minors—from abortion coverage by redefining rape.

Rep. Joe Pitts (R-PA) then introduced the "Protect Life Act", a bill that would "give doctors the green light to let pregnant women die if they have a life-threatening condition and need an emergency abortion".

25. DU Planned for Libya?

President Obama's undeclared and congressionally unauthorised war against Libya may be compounded by the crime of spreading toxic uranium oxide in populated areas of that country.

Concern is being voiced by groups, such as the International Coalition to Ban Uranium Weapons, which monitor the military use of so-called depleted-uranium (DU) anti-tank

and bunker-penetrating shells.

As of late March 2011, the US has not introduced its A-10 Thunderbolts, known also as *Warthogs*, into the Libyan campaign, probably because these subsonic straight-wing craft, while heavily armoured, are vulnerable to shoulder-fired anti-aircraft missiles which Libyan forces are known to possess in large numbers.

Once the air-control situation is improved by continued bombardment, however, these specialised ground-attack aircraft will probably be added to the forces. The A-10 has a particularly large automatic cannon which fires an unusually large 30-mm shell. These shells are often fitted with solid uranium projectiles.

A-10s were heavily used in the Balkans conflict, and Kosovo officials were dismayed to learn that 11 tons of uranium weapons had been fired

there, leaving dangerous uranium dust fallout in their wake.

The US military is fond of DU weapons because the material, made from uranium from which the fissionable U-235 has been removed, is extremely heavy and, in alloy form, is also extremely hard.

Because of DU's mass, projectiles made from the material can penetrate even the heaviest armour. Then, in the heat caused by the collision with an object, the uranium bursts into flame at extreme heat, causing an explosive (and toxic) inferno inside a tank or other vehicle.

Soldiers inside a target vehicle are incinerated. The problem is that the resulting uranium oxide produced by such explosions, besides being highly toxic, is a microscopic alpha-emitter, which if inhaled or ingested by humans is extremely carcinogenic and mutagenic. ∞

Book+DVD by Steven Greer

CONTACT:

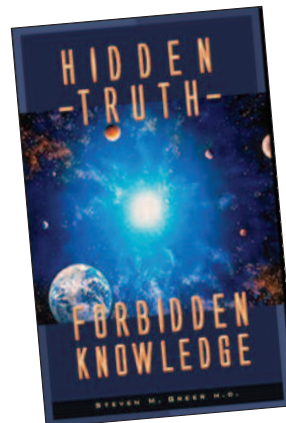

Countdown to
Transformation

by Steven M. Greer, MD

This book goes far beyond the usual accounting of objects seen in the sky and takes the reader into a universe of higher states of consciousness, remote viewing and direct Contact with civilizations that interface with thought and awareness as easily as we talk on cell phones. Journey with the CSETI team as they go beyond the veil of light and the resonant frequency of matter and enter into close contact with numerous ET civilizations who eagerly await the coming Transformation on Earth. The accompanying DVD shows the images, sights and sounds of Contact, as it has evolved over the past 17 years. You will learn how this Contact has been made - and how you, too, can become an Ambassador to the Universe!

KNOWLEDGE

by Steven M. Greer MD

From his sighting of a UFO at an early age, to his amazing near-death experience at age 17, to his unraveling of the secret cabal running the illegal transnational energy and UFO - related projects, to his meetings with a CIA Director, US Senators, heads of state and royalty - you will be moved, shocked and enlightened as you read through this memoir. Journey with Dr Greer as he takes you into the corridors of secret power - beyond the government as we know it - to a shadowy cabal of power-mad controllers, and their hidden agenda.

The Hidden Cause of Cancer and Autoimmune Diseases

Continued from page 46

may eliminate tumours without causing much inflammation, and also help to clean the blood.

Many antimicrobial remedies and devices have been used, for which there is widespread anecdotal and often research evidence of efficacy. Most of these have strong antifungal properties and tend to work without generating strong inflammations. It appears that they mainly clean the blood. Without the presence of pleomorphic microbes, tumours just seem to fade away.

Some well-known examples of antimicrobial remedies are olive leaf extract, *pau d'arco* extract, non-acidified sodium chlorite, kerosene, Lugol's iodine solution, ozone and hydrogen peroxide if used intravenously, the electronic zapper and various electronic devices such as the Rife Frequency Generator which radiate specific frequencies to

destroy pleomorphic microbes. Jim Humble claims success with his intensive MMS therapy (<http://humblemiraclemineal.com/>), but this is difficult to evaluate because of severe harassment and suppression by the US FDA. Minocycline and doxycycline are conventional antibiotics that work for CWD bacteria and have been successful against various autoimmune diseases when used in very low doses over long periods. However, one must be careful to add antifungal remedies and probiotics.

My preference is to combine a high-quality diet with periodic raw-food cleansing, alkalising the body and using moderate amounts long-term of periodically changing antimicrobial remedies and devices. I also like vitalising the blood by exposing the veins under the arms and inside the legs to sunlight. My advice is to continue these efforts until the blood appears to be clean and/or tumours

have disappeared or apparently have become dormant. (See my *Overcoming Cancer* web page at <http://tinyurl.com/3o3xrfn>.) The same approach is also suitable for autoimmune diseases and other degenerative conditions.

Conventional medicine cannot explain adequately how tumours kill patients. The available evidence leads me to conclude that tumours are more or less harmless, and that it is mainly the blood contamination with pleomorphic microbes which is the real killer in cancer, AIDS and various other diseases. ∞

About the Author:

Walter Last is a retired biochemist, research chemist, nutritionist and natural therapist based in Australia. His health-related books are available at <http://tinyurl.com/4xkdgc>. For more information, visit his website <http://www.health-science-spirit.com>.

UFO DISCLOSURE

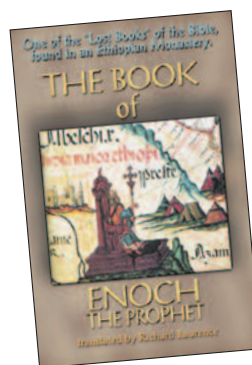

DISCLOSURE

by
Steven M. Greer MD

For the first time ever, over five dozen top-secret military, government, intelligence and corporate witnesses to secret projects tell their true stories which disclose the greatest covert program in world history. This explosive testimony by actual government insiders proves that UFOs are real, that some are of extraterrestrial origin and that super-secret programs have energy and propulsion technologies that will enable humanity to begin a new era.

The Book of Enoch the Prophet

*One of the Bible's
most famous 'lost
books'*

translated by
Richard Laurence

One of the Bible's most famous "lost books", unearthed in Abyssinia (now Ethiopia) in 1773. Its themes include apocalyptic visions, the actions of angels and demons, the Messianic age, the New Jerusalem, the Resurrection and the Final Judgement. Enoch, the son of Cain, communicates with the "fallen ones", whose interference in human affairs resulted in the introduction of evil into the world, and more.

In Memory of Anomalist William Corliss

Continued from page 50

exhibit for museums based on his work, called What Science Doesn't Know. I can't imagine anything more stimulating to the minds of young people than to discover areas of science that are up for grabs, puzzling topics that they could explore, wide-open fields of research where they could make a difference—instead of being presented with science as a closed book of knowledge, as at most science museums.

The work of William Corliss is an inspiration, a wonder-filled refutation that we have not come to the end of science. Quite the contrary. As he would often say, "Much remains to be done." ∞

The Sourcebook Project

Most volumes are still available from: The Sourcebook Project, PO Box 107, Glen Arm, Maryland 21057, USA, <http://www.science-frontiers.com>.

(Source: EdgeScience, Number 9, October–December 2011, published by the Society for Scientific Exploration, 151 Petaluma Blvd S., #228, Petaluma, California 94952, USA, website <http://www.scientificexploration.org>)

About the Author:

Patrick Huyghe is editor-in-chief of Anomalist Books, publisher of ICRL Press and editor of *EdgeScience* magazine. Previously he was the editor of the Simon & Schuster imprint Paraview Pocket Books. He has also created and maintained several websites including *The Anomalist* and *Small Comets*.

Huyghe holds a BA in social psychology from the University of Virginia and an MS in journalism from Syracuse University. After two years of editing and writing on the staff of *Us* and *Newsweek* magazines, in 1980 he turned freelance. For the next two decades he wrote for dozens of magazines, from the *New York Times*

Magazine and *Discover* to *Psychology Today* and *Reader's Digest*, *Health* and *Omni*, *Audubon* and *The Sciences* and many others.

Huyghe has authored four books: *Glowing Birds: Stories from the Edge of Science* (Faber & Faber, 1985), *Columbus Was Last* (Hyperion, 1992), *The Field Guide to Extraterrestrials* (Avon, 1996) and *Swamp Gas Times* (Paraview Press, 2001). He has co-authored five books: *The Big Splash*, with Dr Louis A. Frank (Birch Lane Press, 1990), *The Field Guide to Bigfoot and Other Mystery Primates*, with Loren Coleman (Avon, 1999), *The Field Guide to UFOs*, with Dennis Stacy (Quill, 2000), *The Field Guide to Ghosts and Other Apparitions*, with Hilary Evans (Quill, 2000), and *The Field Guide to Lake Monsters, Sea Serpents, and Other Mystery Denizens of the Deep*, with Loren Coleman (Tarcher, 2002).

Patrick Huyghe can be contacted by email at huyghe@anomalist.com.

The Bion Ring

Electro-magnetic Protection

- The Bion Ring, based on the design of an ancient ring discovered in the Valley of the Kings in Egypt in 1860
- thought to have originated in Atlantis
- utilizes geometric forms placed and balanced to a lost system of ancient knowledge.
- The Bion Ring tunes the wearer's subtle energy fields creating a powerful barrier against electro-magnetic, psychic and other stressors

-a copy of the original ring was worn by Howard Carter during his excavations of King Tut's tomb

Bion ring design voted most potent human energy assist by one of Europe's leading health/consciousness magazines

THE BION RING: REDUCED STRESS, RAPID HEALING, EMOTIONAL BALANCE, ENHANCED MIND FUNCTION AND JOY OF LIFE!

recommended by health professionals

Kinesiology, EAV, pulse diagnosis, Kirlian and now new remarkable daylight photography confirm the Bion technologies to be potent bio-resonance tools promoting rapid healing, and consciousness activation/protection

The Bion Pendant

Bion pendant with keshi pearl

Bion pendant with ruby and keshi pearl

The Bion pendant provides additional protection and can be worn on its own or with the Bion ring for maximum effect, as well as for amplifying the properties of healing gems set within it.

Actual unretouched photo showing invisible to the eye Bion geometries

BEYOND EINSTEIN'S UNIFIED FIELD
 Gravity & Electro-magnetism redefined

by John Brandenburg Ph.D

Veteran plasma physicist John Brandenburg reveals the new theory that finally accomplishes what Einstein failed to do: the GEM Unification Theory proves the mathematical and physical interrelation of the forces of gravity and electromagnetism! He also traces the surprising, hidden influence of Nikola Tesla on Einstein's life. Brandenburg describes control of space-time geometry through electromagnetism, and states that faster-than-light travel will be possible in the future.

Free Energy Research

THE FREE ENERGY DEVICE HANDBOOK
 A Compilation of Patents and Reports

edited by David Hatcher Childress

A large-format compilation of various patents, papers, descriptions and diagrams concerning free-energy devices and systems. *The Free-Energy Device Handbook* is a visual tool for experimenters and researchers into magnetic motors and other over-unity devices. With chapters on the Adams Motor, the Hans Coler Generator, cold fusion, superconductors, N-machines, space-energy generators, Nikola Tesla, T. Townsend Brown, and the latest in free-energy devices. Packed with photos, technical diagrams, patents and fascinating information, this book belongs on every science shelf.

This DVD contains the complete back issues of NEXUS from 1987-2010 in pdf format.

Reconnecting to Nature Through Spiritual Permaculture by Leonid Sharashkin

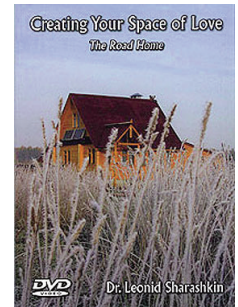

The Ringing Cedars editor reveals worldwide potential for Russia's permaculture garden movement.

The School: Humanity's New Future

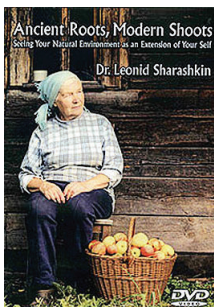

At this Russian school, the children have designed, built and decorated their own campus.

Creating Your Space of Love: The Road Home

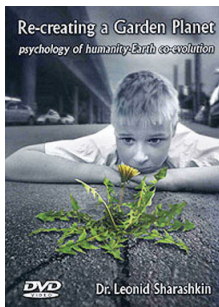

Family domain and eco-village planning, presented by Leonid Sharashkin in Byron Bay.

Ancient Roots, Modern Shoots

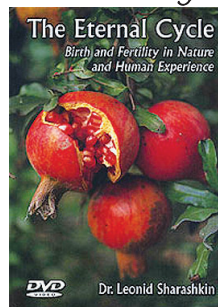

"Seeing Your Natural Environment as an Extension of Your Self" by Leonid Sharashkin.

Recreating A Garden Planet

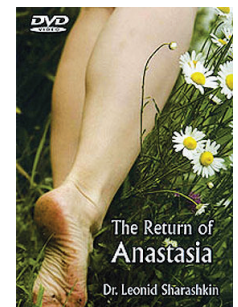

Psychology of Humanity-Earth Co-evolution. Presented by Leonid Sharashkin.

The Eternal Cycle

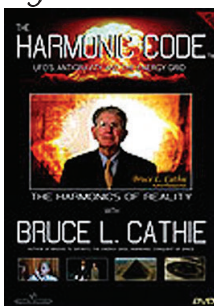

Fertility and Birth in Nature and Human Experience. Presented by Leonid Sharashkin.

The Return of Anastasia

Leo Sharashkin explains the significance of the Russian *dacha* gardening movement.

The Harmonic Code by Bruce Cathie

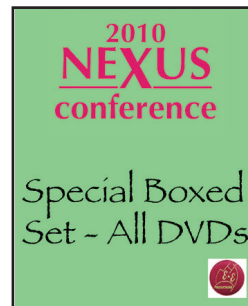

"UFOs, Antigravity and the Energy Grid". Matter, antimatter, time travel, harmonic mathematics etc.

NEXUS Conference DVDs - 2008

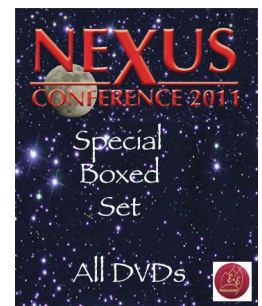

Ringing Cedars, Crystal Skull, Harry Oldfield, Callum Coats, Gary Opit, Hemp, Project Camelot, Ian Ross Vayro & more.

NEXUS Conference DVDs - 2010

Dirty electricity, Jim Marrs, Expanding Earth, Klaus Dona, Dr Kathy Forti, Nassim Haramain, HcG, UFOs and more.

NEXUS Conference DVDs - 2011

Alec Newald, Carol Rosin, Duncan Roads, Linda Moulton Howe, UFOs, Meryl Dorey, Sherrill Sellman and more.

Books available via NEXUS on Ancient Mysteries and Travel Archaeology/Mysteries

The Giza Death Star

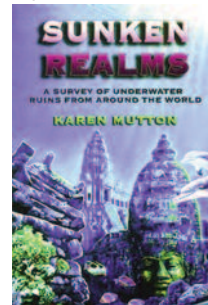

This is physicist Joseph Farrell's amazing book on the secrets of the Great Pyramid of Giza.

2012 and the Shift of Ages

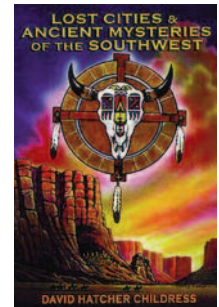

A Guide to the End of the World by Alexander Price. Investigates the cycles of human history and nature.

Sunken Realms

A Survey of Underwater Ruins From Around the World. Includes discussion on causes of sunken cities.

Lost Cities & Ancient Mysteries of the Southwest

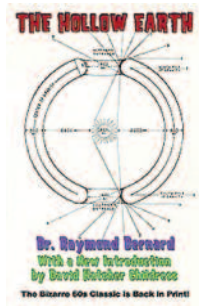

David Hatcher Childress traverses the American Southwest investigating archaeological mysteries.

Axis of the World

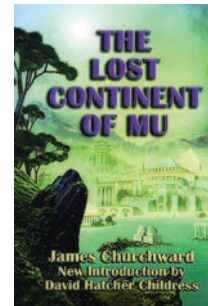

A Multi-disciplinary approach across the Americas in search of the oldest American civilisation.

The Hollow Earth

Dr Raymond Bernard's bizarre 60s classic is back in print! New intro by David Hatcher Childress.

The Lost Continent of Mu

James Churchward's classic on the theory of a lost continent in the Pacific. First published in 1931.

In Secret Tibet

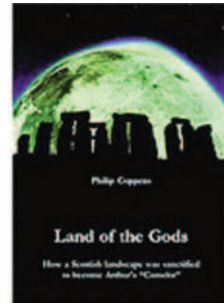

Reprint of a rare 1930s travel book by a German traveller who travelled through forbidden Tibet.

Danger My Ally

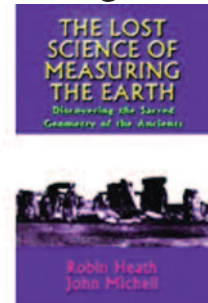

The true life adventure of F.A. Mitchell-Hedges including his discovery of the famous Crystal Skull.

Land of the Gods

How a Scottish Landscape was Sanctified to Become Arthur's Camelot by Philip Coppens.

The Lost Science of Measuring the Earth

Discovering the Sacred Geometry of the Ancients by Robin Heath and John Michell.

Maps of the Ancient Sea Kings

Charles Hapgood's classic 1966 book on ancient maps and world civilisation before Ancient Egypt.

by Henry Stevens

Intelligence reports of supermetals, electric guns, & ray weapons, x-ray and laser weaponry.

Weather Warfare
by Jerry E. Smith

The Military's Plan To Draft Mother Nature. HAARP, environmental & weather-modifying technologies.

ParaPolitics:
Conspiracy in
Contemporary
America

Collection of Kenn Thomas' lecture remarks, interviews and articles from the world's underground press.

From Major Jordan's
Diaries
by George Racey

Diary account of high-level cooperation between Russia and the USA since World War II.

The Secret Vault
by André Douzet and
Philip Coppens

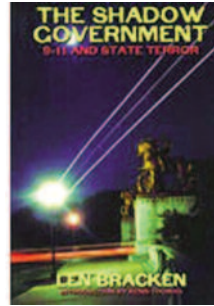

The Secret Societies' Manipulation of Sauniere & the Secret Sanctuary of Notre-Dame-de-Marceille.

Mind Control, World
Control
by Jim Keith

Veteran conspiracy researcher's overview of mind control as a tool of the New World Order.

The Shadow
Government

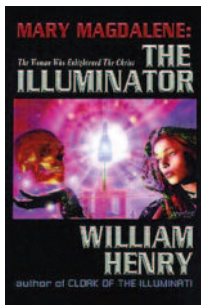

9-11 and State Terror, by Len Bracken, with introduction by Kenn Thomas.

Secrets of the Holy
Lance

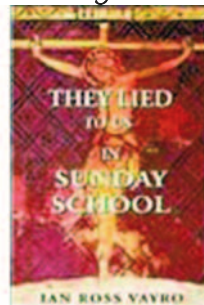

The Spear of Destiny in History & Legend by Jerry E. Smith and George Piccard.

Mary Magdelene
The Illuminator

The Woman Who Enlightened The Christ by William Henry.

They Lied to Us in
Sunday School

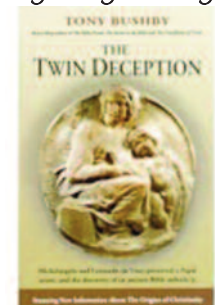

Ian Ross Vayro takes us through ancient biblical texts leading one to question traditional teachings.

The Papal Billions
by Tony Bushby

Damning facts about the Vatican's accumulation of wealth over the centuries.

The Twin Deception
by Tony Bushby

Reading like a suspense novel, this book unlocks the concealed evidence of Jesus' twin brother.

Books available through NEXUS—Environment/Spirituality and Alternative Health

Ringed Cedars Series
by Vladimir Megre

The author's fascinating experience of Anastasia and the ringed cedars of Russia.

13-Moon Diary of Natural Time
2010-2011

Red Overtone Moon Year. Contains Mayan 13-Moon calendar, horoscope, planner & short guide

Stone Age Farming
by Alanna Moore

Eco-Agriculture for the 21st Century—a holistic, practical approach to farm & ecosystem management.

How to Survive 2012

Tactics and Survival Places for the Coming Pole Shift by Patrick Geryl.

Living Energies
by Callum Coats

Viktor Schauberger (1885-1958) & his brilliant ideas & inventions harnessing natural energy explained.

Hidden Nature
by Alick Bartholomew

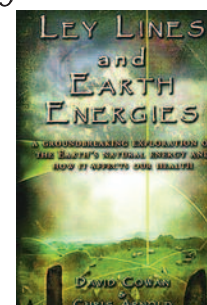

Describes Schauberger's work with water as a living organism. Foreword by David Bellamy.

Voyages Into the Unknown

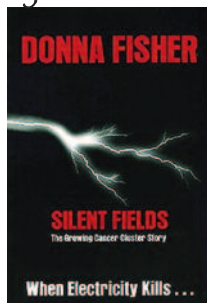

Bruce Moen's forays into the afterlife, including his experience in helping 'retrieve' individuals.

Ley Lines and Earth Energies
by D Cowan & C Arnold

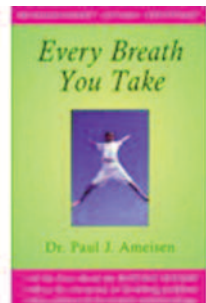

A groundbreaking exploration of the Earth's natural energy and how it affects our health.

Silent Fields
by Donna Fisher

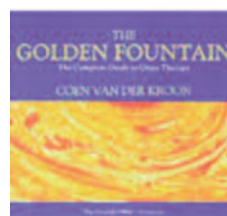

The Growing Cancer Cluster Story—an exposé on the power industry & "dirty" electricity.

Every Breath You Take

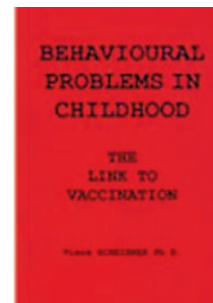

Help for asthma sufferers with information on the Buteyko Method by Dr Paul Ameisen.

The Golden Fountain

The Complete Guide to Urine Therapy by Coen van der Kroon.

Behavioural Problems in Childhood

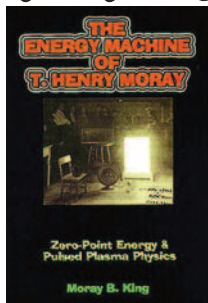

Neurological & behavioural disorders and the link to vaccines by Viera Scheibner PhD.

Suppressed/Frontier Science & Free Energy
A selection of books available from NEXUS

The Energy Machine of T. Henry Moray by Moray B. King

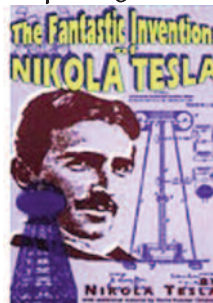

Zero-Point Energy & Pulsed Plasma Physics. 1920s energy device explained by modern science.

Prodigal Genius by John J. O'Neill

Nikola Tesla is revealed as a figure of genius whose influence on the world reaches into the far future.

The Fantastic Inventions of Nikola Tesla Compiled by Childress

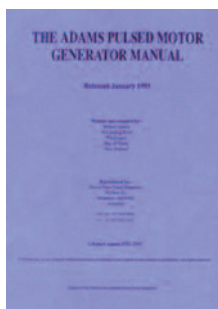

Compendium of the inventions of the originator of electrification. Includes patents, diagrams, photos.

Harnessing the Wheelwork of Nature edited Thomas Valone

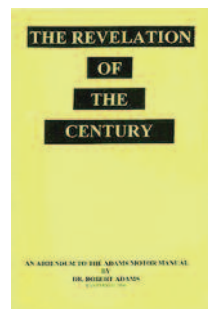

Essays, papers, technical briefings and press clippings dedicated to Tesla's work and memory.

Adams' Pulsed Electric Motor Generator Manual

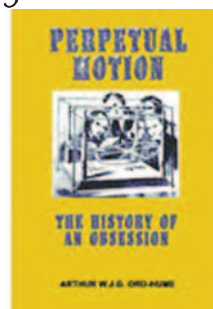

This is the manual which further describes the details on how to build the Robert Adams motor.

The Adams Manual - Addendum

This addendum further updates the research and theory surrounding the Adams' Motor.

Perpetual Motion by Arthur Ord-Hume

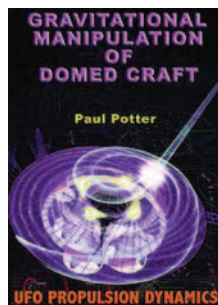

A present-day engineer finds perpetual motion seekers were important in engineering's history.

The Free-Energy Device Handbook

A compilation of patents, diagrams, descriptions and reports, edited by David Hatcher Childress

Gravitational Manipulation of Domed Craft

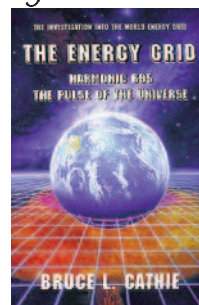

UFO Propulsion Dynamics by Paul Potter. Research based on crashed UFOs from Russia and America.

The Anti-Gravity Handbook

Edited by David Hatcher Childress. Free Energy, Flying Saucer Propulsion, UFOs, NASA Cover-ups.

The Energy Grid by Bruce Cathie

Breakthrough book that explores the incredible potential of the Energy Grid and Earth's Unified Field.

The Tesla Papers by David H. Childress

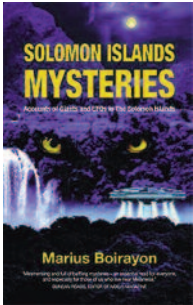

Tesla's vision of the future, including wireless power, anti-gravity, free energy & advanced solar power.

To order visit www.nexusmagazine.com

A selection of books on UFOs and the Unexplained available through NEXUS.

SOLOMON ISLAND MYSTERIES
by Marius Boirayon

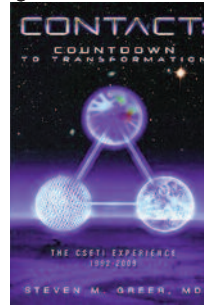

Giants of the Solomon Islands; UFO underwater & underground bases deep in the jungle.

COEVOLUTION
by Alec Newald

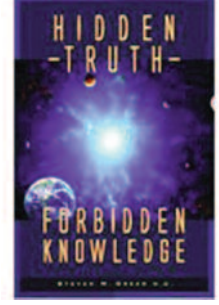

The life-changing true story of a man taken for ten days to an extraterrestrial civilisation.

CONTACT: Countdown to Transformation
by Steven M Greer

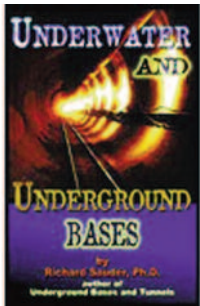

Chronicle of the CSETI team's experience of contact from 1992-2009. Includes bonus DVD.

HIDDEN TRUTH: Forbidden Knowledge
by Steven M Greer

From UFO sightings to meetings with CIA directors, join Greer on his discovery of secret agendas.

UNDERWATER & UNDERGROUND BASES

Dr Richard Sauder's evidence & govt paper trail for the construction of huge bases on & offshore.
